MILITARY INSTITUTE OF SCIENCE AND TECHNOLOGY (MIST)

COURSE CURRICULUM

BACHELOR OF SCIENCE IN NAVAL ARCHITECTURE AND MARINE ENGINEERING

DEPARTMENT OF NAVAL ARCHITECTURE AND MARINE ENGINEERING (NAME)

MARCH 2024

COMMITTEE OF COURSES - NAME DEPT, MIST

The undergraduate course curriculum of the department of Naval Architecture and Marine Engineering (NAME) of Military Institute of Science and Technology (MIST) has been reviewed by the committee as mentioned below.

A. President

1.

Commodore A H M Rafiqul Islam, (E), NUP, psc, BN Head, NAME Department Military Institute of Science and Technology

B. Internal Members

1.

Air Commodore Md Aminul Haque, ndc, psc Dean, Faculty of Mechanical Engineering (FME) Head, Department of Aeronautical Engineering Military Institute of Science and Technology

2.

Cdr Tasnuva Anan, (E), psc, BN Instructor Class-A, NAME Department Military Institute of Science and Technology

3.

Lt Col Palash Kumar Sarker, PhD, Sigs Instructor Class-A, S&H Department Military Institute of Science and Technology

4.

Lt Col Md Nur-E-Mostafa, M.Phil, Ph.D, Engr Instructor Class-A, S&H Department Military Institute of Science and Technology Dr. S M Ikhtiar Mahmud Assistant Professor, NAME Department Military Institute of Science and Technology

 Md. Mezbah Uddin Assistant Professor, NAME Department Military Institute of Science and Technology

7.

Tasmia Hoque Lecturer, NAME Department Military Institute of Science and Technology

C. <u>BUP Members</u>

1.

Brigadier General Md Mustafa Kamal, SGP Dean, Faculty of Science and Technology (FST) Bangladesh University of Professionals (BUP)

2.

Brigadier General Md Mahbubur Rahman Siddiqui, ndc, afwc, psc, MPhil Inspector of College Bangladesh University of Professionals (BUP)

D. <u>External Members</u>

1.

Dr. N. M. Golam Zakaria Professor Department of Naval Architecture and Marine Engineering Bangladesh University of Engineering and Technology

5.

Dr. Md. Shahjada Tarafder Professor Department of Naval Architecture and Marine Engineering Bangladesh University of Engineering and Technology

3. Capt Mohammad Asif Adil, (E), psc, BN General Manager (Production) Dockyard & Engineering Works LTD (DEW)

4. Commodore M Mohidul Hasan, (E), OSP, psc, BN Director of Naval Engineering Bangladesh Navy Headquarters

E. <u>Member Secretary</u>

2.

Lt Col Muhammad Rabiul Islam, PhD, EME Instructor Class-A, NAME Department Military Institute of Science and Technology

<u>CHAPTER 1</u> <u>GENERAL INFORMATION</u>

1.1 Introduction to MIST

The necessity of establishing a technical institute for the Bangladesh Armed Forces was felt in the late eighties. In the absence of such an institution, officers of Bangladesh Armed Forces had been graduating from Bangladesh University of Engineering and Technology (BUET), Bangladesh Institute of Technology (BIT) and other foreign institutions of science and technology. With a view to meet the increasing demand for the development and dissemination of engineering and technological knowledge, Bangladesh Armed Forces established the Military Institute of Science and Technology (MIST) that promises to provide facilities for higher technical education both for the officers of Bangladesh Armed Forces as well as for civil students from home and abroad. The motto of MIST is -Technology for Advancement. Founded on 19 April 1998, MIST started its journey on 31 January 1999 by offering a four-year bachelor's degree on Civil Engineering. Bachelor degree on Computer Science Engineering course started in 2001. Bachelor courses on Electrical, Electronic & Communication Engineering and Mechanical Engineering started their journey from 2003. Bachelor of Science program on Aeronautical Engineering (AE) and Naval Architecture and Marine Engineering (NAME) program were started from 2008-2009 and 2012- 2013 respectively. Besides, four new departments started their academic session from 2014-2015 i.e. Nuclear Science & Engineering (NSE), Biomedical Engineering (BME), Architecture (Arch) and Environmental, Water Resources & Coastal Engineering (EWCE).

Foreign students from SriLanka were admitted for the first time at MIST. Presently students from Maldives, Palestine, Nepal and Ghambia are also studying in different Engineering Programs. MIST envisages creating facilities for military as well as civil students from home and abroad dedicated to pursue standard curriculum leading to Graduation Degree. As an Institution without any gender biasness, MIST is already on steady stride upholding its motto "Technology for Advancement". MIST remains committed to contributing to the wider spectrum of national educational arena and plays a significant role in the development of human resources and ardently pursuing its goal to grow into a "Centre of Excellence". MIST has well-equipped classrooms with multimedia and web camera with internet facilities and laboratories with modern equipment. The medium of instruction for all engineering programs is English. All academic programs of MIST are affiliated with the Bangladesh University of Professionals (BUP) and have close cooperation with Bangladesh University of Engineering and Technology (BUET) and Dhaka University (DU).

1.2 Vision and Mission of MIST

Vision: To be a center of excellence for providing quality education in the field of science, engineering and technology and conduct research to meet the national and global challenges.

Mission:

- a. To provide comprehensive education and conduct research in diverse disciplines of science, engineering, technology and engineering management.
- b. To produce technologically advanced intellectual leaders and professionals with high moral and ethical values to meet socio- economic development of Bangladesh and global needs.
- c. To conduct collaborative research activities with national and international communities for

continuous interaction with academician and industry.

d. To provide consultancy, advisory, testing and other related services to government, nongovernment and autonomous organization including personnel for widening practical knowledge and to contribute in sustainable development of the society.

<u>1.3 Salient Features of MIST</u>

- i. Rigorous admission and selection process for best possible screening interactive sessions in the classroom.
- ii. Regular guest lectures and educational visits.
- iii. Culture of timeliness, commitment and uninterrupted curriculum.
- iv. Flexibility in choosing competent faculties throughout sourcing.
- v. Well thought-out and continuous feedback and assessment system.
- vi. Effective teaching through innovative method.
- vii. Industrial attachment for on job training.
- viii. Emphasis on code of conduct and dress code.
- ix. Focus to develop students as good human with all possible attributes of successful leader.
- x. Tranquil, pollution free and secure campus life.

1.4 Location

MIST is located at Mirpur Cantonment, northwest edge of the greater Dhaka city, a hub of knowledge for the armed forces. Mirpur Cantonment is a small, calm and quiet education village and free from all possible pollution of a city life. A garland like lake with migratory birds, three sides with extended green fields in the summer and water bodies in the rainy season, whistling birds on the tree branches and overall bounty of nature adds to the already existing splendid academic atmosphere. Other neighboring academic institutions are National Defense College (NDC) and Defense Services Command and Staff College (DSCSC) – two international standard education centers.

1.5 Faculties

1.5.1 Faculty of Civil Engineering (FCE):

- Civil Engineering (CE)
- Architecture (Arch)
- Environmental, Water Resources and Coastal Engineering (EWCE)
- Petroleum and Mining Engineering (PME)

1.5.2 Faculty of Electrical & Computer Engineering (FECE):

- Computer Science and Engineering (CSE)
- Electrical, Electronic and Communication Engineering (EECE)

1.5.3 Faculty of Mechanical Engineering (FME):

- Mechanical Engineering (ME)
- Aeronautical Engineering (AE)
- Naval Architecture and Marine Engineering (NAME)
- Industrial and Production Engineering (IPE)

1.5.4 Faculty of Science & Engineering (FSE):

- Biomedical Engineering (BME)
- Nuclear Science and Engineering (NSE)
- Department of Science (Mathematics, Physics, Chemistry) and Humanities (Only Post Graduate)

Presently MIST has 12 (twelve) departments to conduct B.Sc. Engineering program under 04 (four) different engineering faculties. The departments impart education based on common objectives and outcomes set by MIST and have defined program objectives and outcomes, specific to the departments respectively.

1.6 Eligibility of Students for Admission in MIST (Subject to review each year)

The students must fulfill the following requirements:

- i. **<u>Bangladeshi Students.</u>** Minimum qualifications to take part in the admission test are as follows:
 - (1) **SSC Examination (or Equivalent).** The applicant must have passed the examination in Science Group obtaining a minimum GPA of 4.00 (without fourth subject) on the scale of 5.0. Only the applicants who passed SSC or Equivalent Examination in Corresponding current and previous one year can apply.
 - (2) **HSC Examination (or Equivalent).** The applicants passed in current and previous one year must obtain minimum total grade point 17 in four subjects (Mathematics, Physics, Chemistry and English).
 - (3) GCE ('O' and 'A' Levels or Equivalent)
 - (i) The applicant who passed in current and previous one year must have qualified with minimum 'B' grade in five subjects including Mathematics, Physics, Chemistry, and English in GCE 'O' Level.
 - (ii) The applicant who passed in current and previous one year must have minimum two 'B' grades and one 'C' grade in Mathematics, Physics, and Chemistry in GCE 'A' Level.
 - (4) Applicants interested in Biomedical Engineering must have Biology at HSC or equivalent level with a minimum grade point of 'A-' / GCE 'A' or equivalent level with a minimum grade point of 'C'.
 - (5) Sex: Male and Female.
 - ii. <u>Foreign Students.</u> Maximum 3% of overall vacancies available will be kept reserved for the foreign students and will be offered to foreign countries through Armed Forces Division (AFD) of the Government of the People's Republic of Bangladesh. Applicants must fulfill the following requirements:
 - 1. Educational qualifications as applicable for Bangladeshi civil students or equivalent.
 - 2. Must have security clearance from respective Embassy/High Commission in Bangladesh.
 - 3. Sex: Male and Female.

Note: In the event of non-availability of foreign students, Bangladeshi civil candidates will fill up the vacancies.

1.7 Number of Seats

The highest number of seats for 04 (Four) years Bachelor Degree in Engineering programmes (Unit–A) and 5 (Five) years Bachelor Degree of Architecture programme are as follows:

Allocation of Seats			
Ser	Unit	Department	Seats
1.		Civil Engineering (CE)	60
2.		Computer Science and Engineering (CSE)	60
3.		Electrical, Electronic & Communication Engineering (EECE)	60
4.		Mechanical Engineering (ME)	60
5.	Α	Aeronautical Engineering (AE)	50
6.		Naval Architecture and Marine Engineering (NAME)	40
7.		Biomedical Engineering (BME)	40
8.		Nuclear Science and Engineering (NSE)	40
9.		Environmental, Water Resources and Coastal Engineering (EWCE)	60
10.		Industrial and Production Engineering (IPE)	50
11.		Petroleum and Mining Engineering (PME)	25
12.	В	Architecture (Arch)	25
	Total		570

<u>1.8 Admission Procedure</u>

1.8.1 <u>Syllabus for Admission Test.</u> Admission test will be conducted on the basis of the syllabus of Mathematics, Physics, Chemistry and English (comprehension and functional) subjects of HSC examinations of all boards of secondary and higher secondary school certificates. There will be no multiple-choice type questions (MCQ). Admission test will be conducted out of 200 marks and the distribution of marks is given below:

Ser.	Subjects	Marks
a.	Mathematics	90
b.	Physics	70
с.	Chemistry	30
d.	English	10
	Total	200

- 1.8.2 **<u>Final Selection</u>**. Merit list is prepared based on: (subjected to change every year)
 - 1. Total marks obtained in Written Test -60%
 - 2. Total marks obtained in Higher Mathematics, Physics and Cheminstry in HSC/equivalent 20%

3. Total marks obtained in Mathematics, Physics and Chemistry in SSC/equivalent -20%Individual choice for the selection of departments will be given preference as far as possible. Minimum qualifying marks in the test is 40% for the applicants. In case of tie in the result of admission test, difference will be judged on the basis of marks obtained in Mathematics, Physics, Chemistry and English respectively in admission test.

1.8.3 <u>Medical Checkup.</u> Civil candidates selected through admission test will go for medical checkup in MIST medical center. If the medical authority considers any candidate unfit for study in MIST due to critical/contagious/mental diseases as shown in medical policy of MIST will be declared unsuitable for admission.

1.9 Students Withdrawal Policy

<u>1.9.1 General Policy of Withdrawal</u>

The undergraduate (B.Sc.) Engineering programs for all engineering disciplines are planned for 04 regular levels, comprising of 08 regular semesters for Architecture programme it is planned for 5 regular levels, comprising of 10 regular terms. It is expected that all students will earn degree by clearing all the offered courses in the stipulated time. In case of failure the following policies will be adopted:

- a. Students failing in any course/subject will have to clear/pass the said course/ subject by appearing it in supplementary/ self study (for graduating student) examination as per examination policy.
- b. Students may also retake the failed subject/course in regular term/short term as per Examination policy.
- c. Maximum grading for supplementary self study examination etc of failed subjects will be B+ as per examination policy.
- d. One student can retake/reappear in a failed subject/course only twice. However, With the permission of Academic Council of MIST, a student may be allowed for third time as last chance.
- e. In case of sickness, which leads to missing of more than 40% classes or miss term final examination (supported by requisite medical documents), students may be allowed to withdraw temporarily from that term and repeat the whole level with the regular level in the next academic session, subject to the approval of Academic Council, MIST. However, he/she has to complete the whole undergraduate program within 06 (six) academic years (for Architecture 07 academic years) from the date of his/her registration.
- f. Minimum credit requirement for the award of bachelor's degree in Engineering (Bsc Engg) and Architecture (B. Arch) will be decide by the respective Department as per existing rules. However, the minimum CGPA requirement for obtaining a bachelor degree in engineering and Architecture is 2.20.
- g. Whatever may be the cases, students have to complete the whole undergraduate Program within 06 (six) academic years for B.Sc Engineering and 07 (seven) years for Bachelor of Architecture from the date of registration.
- h. All other terms and condition of MIST Examination Policy remain valid.

1.9.2 Withdrawal on Disciplinary Ground

1) <u>Unfair Means.</u> Adopting of unfair means may result in expulsion of a student from the program and so from the institution. The Academic Council of MIST will authorize such expulsion on the basis of recommendation of the Disciplinary Committee, MIST and as per policy approved by the affiliating university (BUP). Following would be considered

as unfair means adopted during examinations and other contests:

- a. Communicating with fellow students for obtaining help in the examinations.
- b. Copying from another student's script/report/paper.
- c. Copying from desk or palm of a hand or from other incriminating documents.
- d. Possession of any incriminating document whether used or not.
- 2) **Influencing Grades.** MIST Authority may expel/withdraw any student for approaching directly or indirectly in any form to influence a teacher or MIST authority for grades.
- 3) **Other Indiscipline Behaviour.** MIST Authority may withdraw/expel any student on disciplinary ground, if any form of indiscipline or unruly behaviour is seen from him/her which may disrupt the academic environment/program or is considered detrimental to MIST's image.
- 4) **Immediate Action by the Disciplinary Committee of MIST**. The Disciplinary Committee, MIST may take immediate disciplinary action against any student of the institution. But later the approval of BUP has to be taken. In case of withdrawal/expulsion, the matter will have to be referred later to the next academic Council, MIST.

1.9.3 Withdrawal on Own Accord

- a. <u>**Permanent Withdrawal.**</u> A Student who has already completed some courses and has not performed satisfaction may apply for a permanent withdrawal.
- b. <u>**Temporary Withdrawal.**</u> A student, if he/she applies, may be allowed to withdraw temporarily from the program, subject to approval of Academic Council of MIST, but he/she has to complete the whole program within 06 (six) academic years (for Architecture 07 academic years) from the date of his/her registration.

CHAPTER 2

RULES AND REGULATIONS FOR UNDERGRADUATE PROGRAMME AT MIST

2.1 Introduction

MIST has introduced course system for undergraduate studies from the academic session 2017-18. Therefore, the rules and regulations mentioned in this paper will be applicable to students for administering undergraduate curriculum through the Course System. This will be introduced with an aim of creating a continuous, even and consistent workload throughout the term for the students.

2.2 The Course System

2.2.1 The salient features of the Course System are as follows:

- 1. Number of theory courses will be generally 06 or as per syllabus in each term. However, with the recommendation of course coordinator and Head of the Department, Commandant MIST may allow up to 07 courses in exceptional cases if department can accommodate within 24 cr hr.
- 2. Students will not face any level repeat for failing.
- 3. Students will get scope to improve their grading.
- 4. Introduction of more optional courses to enable the students to select courses according to their individual needs and preferences.
- 5. Continuous evaluation of students' performance.
- 6. Promotion of student-teacher interaction and contact.
- **2.2.2** Beside the professional courses pertaining to each discipline, the undergraduate curriculum gives a strong emphasis on acquiring thorough knowledge in the basic sciences of mathematics, physics and chemistry. Due importance is also given on the study of several subjects in humanities and social sciences.
- **2.2.3** The first two years of bachelor's degree programs generally consist of courses in basic engineering, general science and humanities subjects; while the third and subsequent years focus in specific disciplines.

2.3 Number of Terms in a Year

There will be two terms Spring Term (Jan-Jun) and Fall Term (Jul-Dec) in an academic year.

2.4 Duration of Terms

The duration of each of Spring Term and Fall Term (maximum 22 weeks) may be as under:

Ser	Events	Durations
1.	Classes before Mid Term	7 weeks
2.	Mid Term Vacation	1 week
3.	Classes after Mid Term	7 weeks

4.	Makeup Classes and Preparatory leave	2/3 weeks
5.	Term Final Examination	2/3 weeks
6.	Term End Vacation	1/2 week

2.5 Course Pattern and Credit Structure

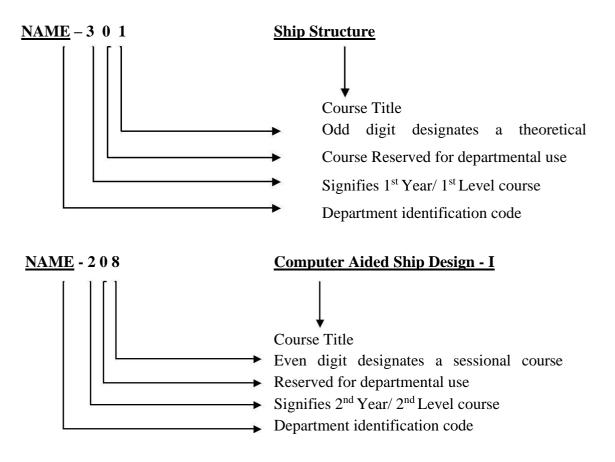

The undergraduate program is covered by a set of theoretical courses along with a set of laboratory (sessional) courses to support them.

2.6 Course Designation System

Each course is designated by a maximum of three/four letter code identifying the department offering the course followed by a three-digit number having the following interpretation:

- a. The first digit corresponds to the year/level in which the course is normally taken by the students.
- b. The second digit is reserved for departmental use. It usually identifies a specific area/group of study within the department.
- c. The last digit is an odd number for theoretical courses and an even number for sessional courses.

The course designation system is illustrated as follows:

2.7 Assignment of Credits

The assignment of credits to a theoretical course follows a different rule from that of a sessional course.

- a. **Theoretical Courses:** One lecture per week per term is equivalent to one credit.
- b. Sessional Courses: Credits for sessional courses is half of the class hours per week per term.
- c. **Project and Thesis Courses**: Credits are also assigned to project and thesis work taken by the students. The amount of credits assigned to such work varies from one discipline to another.

2.8 Types of Courses

The types of courses included in the undergraduate curricula are divided into the following groups:

- a. **Core Courses:** In each discipline, a number of courses are identified as core courses, which form the nucleus of the respective bachelor's degree program. A student has to complete the entire designated core courses of his/her discipline.
- b. **Prerequisite Courses:** Some of the core courses are identified as prerequisite courses for a specific subject.
- c. **Optional Courses:** Apart from the core courses, the students can choose from a set of optional courses. A required number of optional courses from a specified group have to be chosen.

2.9 Course Offering and Instruction

- The courses to be offered in a particular term are announced and published in the Course Catalog along with the tentative Term Schedule before the end of the previous term. The courses to be offered in any term will be decided by Board of Undergraduate Studies (BUGS) of the respective department.
- Each course is conducted by a course teacher who is responsible for maintaining the expected standard of the course and for the assessment of students' performance. Depending on the strength of registered students (i.e. on the number of students) enrolled for the course, the teacher concerned might have course associates and Teaching Assistants (TA) to aid in teaching and assessment.

2.10 Teacher Student Interaction

The new course system encourages students to come in close contact with the teachers. For promotion of a high level of teacher-student interaction, each student is assigned to an adviser and the student is free to discuss all academic matters with his/her adviser. Heads of the departments, Director of Administration, Director of Students Welfare (DSW), Dean and Commandant address the students at some intervals. Students are also encouraged to meet any time with other teachers for help and guidance in academic matters. However, students are not allowed to interact with teachers after the moderation of questions.

2.11 Students' Adviser

1. One adviser is normally appointed for a group of students by the BUGS of the concerned

department. The adviser advises each student about the courses to be taken in each term by discussing the academic program of that particular term with the student.

- 2. However, it is also the student's responsibility to keep regular contact with his/her adviser who will review and eventually approve the student's specific plan of study and monitor subsequent progress of the student.
- 3. For a student of second and subsequent terms, the number and nature of courses for which he/she can register is decided on the basis of academic performance during the previous term. The adviser may permit the student to drop one or more courses based on previous academic performance.

2.12 Course Registration

Any student who uses classroom, laboratory facilities or faculty-time is required to register formally. Upon admission to the MIST, students are assigned to advisers. These advisers guide the students in choosing and registering courses.

2.13 Registration Procedure

At the commencement of each term, each student has to register for courses online in consultation with and under the guidance of his/her adviser. The date, time and venue of registration are announced in advance by the Registrar's Office. Counselling and advising are accomplished at this time. It is absolutely essential that all the students be present for registration at the specified time.

2.14 Pre-conditions for Registration

- i. For first year students, department-wise enrollment/admission is mandatory prior to registration. At the beginning of the first term, an orientation program will be conducted for them where they are handed over with the registration package on submission of the enrolment slip.
- ii. Any student, other than the new batch, with outstanding dues to the MIST or a hall of residence is not permitted to register. Each student must clear their dues and obtain a clearance certificate, upon production of which, he/she will be given necessary Course Registration Forms to perform course registration.
- iii. A student is allowed to register in a particular course subject to the class capacity constraints and satisfaction of pre-requisite courses. However, even if a student fails in a pre-requisite course in any term, the concerned department (BUGS) may allow him/her to register for a course which depends upon the pre-requisite course provided that his/her attendance and performance in the continuous assessment of the mentioned pre-requisite course is found to be satisfactory.

2.15 Registration Deadline

Each student must register for the courses to be taken before the commencement of each term. Late registration is permitted only during the first week of classes. Late registration after this date will not be accepted unless the student submits a written application to the registrar through the concerned Head of the department explaining the reasons for delay. Acceptable reasons may be medical problems with supporting documents from the Medical Officer of MIST or some other academic

commitments that prohibit enrollment prior to the last date of registration.

2.16 Penalty for Late Registration

Students who fail to register during the designated dates for registration are charged a late registration fee of Tk. 100.00 (One hundred only) per credit hours. Under no circumstances, the penalty for late registration will be waived.

2.17 Limits on the Credit Hours to be Taken

- a. A student should be enrolled for at least 15 credit hours and is allowed to take a maximum of 24 credit hours. Relaxation on minimum credit hours may be allowed. A student must enroll for the sessional courses prescribed in a particular term within the allowable credit hour limits.
- b. In special cases where it is not possible to allot the minimum required 15 credit hours to a student, the concerned department (BUGS) may permit with the approval of the Commandant, a lesser number of credit hours to suit individual requirements. Only graduating students may be allowed to register less than 15 credit hours without approval of Commandant. A list of all such cases to be forwarded to Register Office, ICT directorate and Controller of Exam Office by the respective Department.

2.18 Course Add/Drop

- 1. A student has some limited options to add or drop courses from the registration list. Addition of courses is allowed only within the first two weeks of a regular term. Dropping a course is permitted within the first four weeks of a regular term. Add or drop is not allowed after registration of courses for Supplementary-I and Supplementary-II examination.
- 2. Any student willing to add or drop courses has to fill up a Course Adjustment Form. This also has to be done in consultation with and under the guidance of the student's respective adviser. The original copy of the Course Adjustment Form has to be submitted to the Registrar's Office, where the required numbers of photocopies are made for distribution to the concerned adviser, Head, Dean, Controller of Examinations and the student.
- 3. All changes must be approved by the adviser and the Head of the concerned department. The Course Adjustment Form has to be submitted after being signed by the concerned persons.

2.19 Withdrawal from a Term

If a student is unable to complete the Term Final Examination due to serious illness or serious accident, he/she may apply to the Head of the degree awarding department for total withdrawal from the term before commencement of term final examination. However, application may be considered during term final examination in special case. The application must be supported by a medical certificate from the Medical Officer of MIST. The Academic Council will take the final decision about such applications. However, the total duration for graduation will not exceed 6 academic years.

2.20 The Grading System

The total performance of a student in a given course is based on a scheme of continuous assessment for theory courses. This continuous assessment is made through a set of quizzes, class tests, class evaluation, class participation, homework assignment and a term final examination. The assessments for sessional courses are made by evaluating performance of the student at work during the class, viva-voce during laboratory hours and quizzes. Besides that, at the end there will be a final lab test. Each course has a certain number of credits, which describes its corresponding weightages. A student's performance is measured by the number of credits completed satisfactorily and by the weighted average of the grade points earned. A minimum grade point average (GPA) is essential for satisfactory progress. A minimum number of earned credits also has to be acquired in order to qualify for the degree.

Numerical Markings	Grade	Grade Points
80% and above	A+	4.00
75% to below 80%	А	3.75
70% to below 75%	A-	3.50
65% to below 70%	B+	3.25
60% to below 65%	В	3.00
55% to below 60%	B-	2.75
50% to below 55%	C+	2.50
45% to below 50%	С	2.25
40% to below 45%	D	2.00
below 40%	F*	0.00
Incomplete	Ι	-
Withdrawal	W	-
Capstone Project/Thesis continuation	Х	-

Letter grades and corresponding grade points will be given as follows:

* Subject in which the student gets F grade shall not be regarded as earned credit hours for the calculation of Grade Point Average (GPA)

2.21 Marks Distribution

2.21.1 Theory. Forty percent (40%) of marks of a theoretical course shall be allotted for continuous assessment, i.e. assignments, class tests, pop quizzes, observations, projects and mid-term assessment. These marks must be submitted to Office of the Controller of Exam before commencement of final exam. The rest of the marks will be allotted to the Term Final Examination. The duration of final examination will be three (03) hours. The scheme of continuous assessment that a particular teacher would follow for a course will be announced on the first day of the classes. Distribution of marks for a given course per credit is as follows:

Class Performance	5%
Class Attendance	5%
Class Test/ Assignment	20%
Mid Term Assessment (Exam / Project)	10%
Final Examination (Section A & B)	60%
Total	100%

Basis for awarding marks for class Attendance will be as follows:

Class Attendance	Marks
90% and above	100%
85% to less than 90%	90%
80% to less than 85%	80%
75% to less than 80%	70%
70% to less than 75%	60%
Below 70%	00%

Note:

- 1. In final exam, each section can be used for achieving not more than two course outcomes (COs). The remaining COs should be attained from mid-term assessment or class tests. The course teacher has to inform the student at the beginning of the terms.
- 2. Course teacher of a particular course has to inform the department whether he/she wants to assess mid-term through exam or project within first two weeks of beginning of a term. The duration of mid-term examination should not be more than 50 minutes which has to be conducted in between 6th to 9th week of a semester. If mid-term assessment is done through project, then there should be project report and presentation.
- 3. The weightage of class performance can be assessed through checking attentiveness during classes or arranging unnoticed pop quizzes.
- 4. The number of class tests shall be n for 3.0 and above credit courses and (n-1) shall be considered for grading where n is the number of credits of the course. However, for courses having credits below 3.0, the considered class tests shall be 2 out of 3.
- 5. All class test will carry 20 marks each. Exam software system will finally convert these achieved marks into total class test marks as per credit hour. i.e for n = 1(20), n = 2 (40), n = 3 (60), n = 4(80) etc.
- 6. Irrespective of the result of the continuous assessment (class performance, class test, mid-term assessment), a student has to appear in the final examination (where applicable) for qualifying/passing the concern course/ subject.

2.21.2 Laboratory/Sessional/Practical Examinations. Sessional courses are designed and conducted by the concerned departments. Examination on Laboratory/ sessional/practical subjects will be conducted by the respective department before the commencement of term final examination. The date of practical examination will be fixed by the respective department. Students will be evaluated in the sessional courses on the basis of the followings.

Total	100%
Viva Voce/Presentation	10%
Final Evaluation (exam/project/assignment)	30%
Mid-Term Evaluation (exam/project/assignment)	20%
Report Writing/ Programming	15%
Conduct of Lab Tests/Class Performance	25%

2.21.3 Laboratory/Sessional Course in Language. The distribution will be as under:

Class performance/observation	10%
Written Assignment	15%
Oral Performance	25%
Listening Skill	10%
Group Presentation	30%
Viva Voce	10%
Total	100%

2.21.4 Class Attendance. Class Attendance may be considered as a part of continuous assessment. No mark will be allotted for attending class.

2.22 Collegiate, Non-collegiate and Dis-collegiate

Students having class attendance of 85% or above in individual subject will be treated as collegiate and less than 85% and up to 70% will be treated as non-collegiate in that subject. The non-collegiate student(s) may be allowed to appear in the examination subject to payment of non-collegiate fee/fine of an amount fixed by MIST/BUP. Students having class attendance below 70% will be treated as discollegiate and will not be allowed to appear in the examination and treated as fail. But in a special case such students may be allowed to appear in the examination with the permission of Commandant and it must be approved by the Academic Council.

2.23 Calculation of GPA

Grade Point Average (GPA) is the weighted average of the grade points obtained of all the courses passed/completed by a student. For example, if a student passes/completes neuroses in a term having credits of C_1, C_2, \ldots, C_n and his grade points in these courses are G_1, G_2, \ldots, G_n respectively then

$$GPA = \frac{Grade \text{ points earned in the semester}}{Credits \text{ complete in the semester}}$$

 $GPA = \frac{\sum (Credit \text{ hours in a course} \times Grade \text{ points earned in that course})}{Credits \text{ completed in the semester}}$

$$GPA = \frac{\sum_{i=1}^{n} (C_i \times G_i)}{\sum_{i=1}^{n} C_i}$$

The Cumulative Grade Point Average (CGPA) is the weighted average of the GPA obtained in all the terms passed/completed by a student. For example, if a student passes/ completes terms having total credits of TC_1 , TC_2 ,..., TC_n and his GPA in these terms are GPA₁, GPA₂,...,GPA_n, respectively then

$$\label{eq:cgpa} \mathsf{CGPA} = \frac{\sum_{i=1}^{n} \mathsf{TC}_i \times \mathsf{GPA}_i}{\sum_{i=1}^{n} \mathsf{TC}_i}$$

Numerical Example

Course	Credit Ci	Grade Points	Gi	Ci*Gi
NAME 107	3.00	A+	4.00	12.00
CHEM 101	3.00	A+	4.00	12.00
PHY 101	3.00	A+	4.00	12.00
MATH 101	3.00	A+	4.00	12.00
GEBS 101	2.00	А	3.75	7.50
LANG 102	1.50	A+	4.00	6.00
ME 150	1.50	А	3.75	5.625
CHEM 122	1.50	A	3.75	5.625
SHOP 180	1.50	A+	4.00	6.00
Total	20.00			78.75

Suppose a student has completed eight courses in a term and obtained the following grades:

GPA = $78.75/20 = 3.9375 \approx 3.94$

Suppose a student has completed four terms and obtained the following GPA.

Land	Torres	Earned Credit Hours	Earned GPA	TC:*CDA:	
Level	Term	TCi	GPA _i	TCi*GPAi	
1	Ι	20.00	3.94	78.80	
1	II	21.00	3.84	80.64	
2	Ι	20.25	3.92	79.38	
2	II	20.25	3.98	80.60	
Total		81.50		319.42	

CGPA = 319.42/81.50 = 3.92

2.24 Impacts of Grade Earned

- a) The courses in which a student has earned a 'D' or a higher grade will be counted as credits earned by him/her. Any course in which a student has obtained an 'F' grade will not be counted towards his/her earned credits or GPA calculation. However, the 'F' grade will remain permanently on the Grade Sheet and the Transcript.
- b) A student who obtains an 'F' grade in a core course will have to repeat that particular course. However, if a student gets an 'F' in an optional course, he/she may choose to repeat that course or take a substitute course if available. When a student will repeat a course in which he/she has previously obtained an 'F', he/she will not be eligible to get a grade better than 'B+' in that repeated course.
- c) If a student obtains a grade lower than 'B+' in a particular course he/she will be allowed to repeat the course only once for the purpose of grade improvement. However, he/she will not be eligible to get a grade better than 'B+' for an improvement course.
- d) A student will be permitted to repeat for grade improvement purposes a maximum of 6 courses in BSc. Engineering programs and a maximum of 7 courses in B. Arch. program.
- e) If a student obtains a 'B+' or a better grade in any course he/she will not be allowed to repeat the course for the purpose of grade improvement.

2.25 Classification of Students

a. At MIST, regular students are classified according to the number of credit hours completed/earned towards a degree. The following classification applies to all the students:

Level	Credit Hours Earned			
Level	Engineering/URP	Architecture		
Level 1	0.0 to 36.0	0.0 to 34.0		
Level 2	More than 36.0 to 72.0	More than 34.0 to 72.0		
Level 3	More than 72.0 to 108.0	More than 72.0 to 110.0		
Level 4	More than 108.0	More than 110.0 to 147.0		
Level 5		More than 147.0		

b. However, before the commencement of each term all students other than new batch are classified into three categories:

<u>Category 1:</u> This category consists of students who have passed all the courses described for the term. A student belonging to this category will be eligible to register for all courses prescribed for the upcoming term.

<u>Category 2</u>: This category consists of students who have earned a minimum of 15 credits but do not belong to category 1. A student belonging to this category is advised to take at least one course less since he might have to register for one or more backlog courses as prescribed by his/her adviser.

<u>Category 3:</u> This category consists students who have failed to earn the minimum required 15 credits in the previous term. A student belonging to this category is advised to take at least two courses less than a category 1 student subject to the constraint of registering at least 15 credits. However, he will also be required to register for backlog courses as prescribed by the adviser.

c. <u>Definition of Graduating Student.</u> Graduating students are those students who will have ≤ 24 credit hour for completing the degree requirement.

2.26 Performance Evaluation

- 1. The performance of a student will be evaluated in terms of two indices, viz. Term Grade Point Average and Cumulative Grade Point Average which is the grade average for all the terms completed.
- 2. Students will be considered to be making normal progress toward a degree if their Cumulative Grade Point Average (CGPA) for all work attempted is 2.20 or higher. Students who regularly maintain a term GPA of 2.20 or better are making good progress toward the degrees and are in good standing with MIST. Students who fail to maintain this minimum rate of progress will not be in good standing. This can happen when any one of the following conditions exists.
 - i. The term GPA falls below 2.20.
 - ii. The Cumulative Grade Point Average (CGPA) falls below 2.20.
 - iii. The earned number of credits falls below 15 times the number of terms attended.
- 3. All such students can make up their deficiencies in GPA and credit requirements by completing courses in the subsequent term(s) and backlog courses, if there are any, with better grades. When the minimum GPA and credit requirements are achieved the student is again returned to good standing.

2.27 Minimum Earned Credit and GPA Requirement for Obtaining Degree

- a. Minimum credit hour requirements for the award of Bachelor's degree in engineering (BSc Engg) and architecture (B Arch) will be decided by the respective department (BUGS). However, the syllabus of all BSc engineering prog must be of minimum 157 credit hours or more and for architecture prog minimum 189 credit hours or more. A student must earnsearn minimum credit hour set in the syllabus by the concerned department for qualifying Bachelor's Degree. The minimum CGPA requirement for obtaining a Bachelor's degree in engineering and architecture is 2.20.
- b. A student may take additional courses with the consent of his/her Adviser in order to raise CGPA, but he/she may take a maximum of 15 such additional credits in engineering and 18 such additional credits in architecture beyond respective credit-hour requirements for Bachelor's degree during his/her entire period of study.

2.28 Application for Graduation and Award of Degree

A student who has fulfilled all the academic requirements for Bachelor's degree will have to apply to the Controller of Examinations through his/her Adviser for graduation. Provisional Degree will be awarded by BUP on completion of credit and GPA requirements.

2.29 Time Limits for Completion of Bachelor's Degree

A student must complete his studies within a maximum period of six years for engineering and seven years for architecture.

2.30 Attendance, Conduct and Discipline

MIST has strict rules regarding the issues of attendance in class and discipline.

- a) <u>Attendance</u>: All students are expected to attend classes regularly. The university believes that attendance is necessary for effective learning. The first responsibility of a student is to attend classes regularly and one is required to attend the classes as per MIST rules.
- b) <u>Conduct and Discipline</u>: During their stay in MIST all students are required to abide by the existing rules, regulations and code of conduct. Students are strictly forbidden to form or be members of student organization or political party, club, society etc., other than those set up by MIST authority in order to enhance student's physical, intellectual, moral and ethical development. Zero tolerance in regards of sexual abuse and harassment in any forms and drug abuse and addiction are strictly observed in the campus.

2.31 Absence during a Term

A student should not be absent from quizzes, tests, etc. during the term. Such absence will naturally lead to reduction in points/marks, which count towards the final grade. Absence in the Term Final Examination will result in an F grade in the corresponding course. A student who has been absent for short periods, up to a maximum of three weeks due to illness, should approach the course teacher(s) or the course (s) for make-up quizzes or assignments immediately upon return to classes. Such request has to be supported by medical certificate from competent authority (e.g. CMH/MIST Medical Officer).

2.32 Recognition of Performance

As recognition of performance and ensure continued studies MIST awards medals, scholarships and stipends will be given as per existing rules and practices.

2.33 Types of Different Examinations (Subject to change for different academic session)

Following different types of final Examinations will be conducted in MIST to evaluate the students of Undergraduate Programs:

- a) **Term Final Examination:** At the end of each normal term (after 22wk or so), Term Final Examination will be held. Students will appear in the Term Final Examination for all the theory courses they have taken in the Term.
- b) <u>Supplementary Examination</u>: It will take place twice in a year. Supplementary-I is defined as provision of giving exam in the first week of Spring Term (Jan-Jun) / Fall Term (Jul-Dec) end break and Supplementary-II in the first week of Fall Term (Jul-Dec) / Spring Term (Jan-Jun) end break, respectively. Students will be allowed to register for a maximum of two theory courses (Failed/Improvement) in Supplementary-II and maximum of one theory course (Failed/Improvement) in Supplementary-II. However, with the approval of Commandant, in special circumstances, departments may allow students to register for a maximum of one theory courses (Failed/Improvement) in Supplementary-I and maximum of two theory courses (Failed/Improvement) in Supplementary-I and maximum of two theory courses (Failed/Improvement) in Supplementary-I and maximum of two theory courses (Failed/Improvement) in Supplementary-I and maximum of two theory courses (Failed/Improvement) in Supplementary-I and maximum of two theory courses (Failed/Improvement) in Supplementary-I and maximum of two theory courses (Failed/Improvement) in Supplementary-I and maximum of two theory courses (Failed/Improvement) in Supplementary-I and maximum of two theory courses (Failed/Improvement) in Supplementary-I.
- c) **Improvement Examination:** It will be taken during Supplementary-I and Supplementary-II Examination. Questions will be same as the question of the regular examination of that Supplementary Examination (if any). Student can take maximum two subjects at a time (two subjects in supplementary-I and one subject in supplementary-II) and maximum 6 subjects in the whole academic duration. If a student obtains a grade lower than 'B+' in a course, he/she will be allowed to repeat the course only once for grade improvement. However, he/she will not be eligible to get a grade better then 'B+' for an improvement course. Among the previous result and improvement examination result, best one will be considered as final result for an individual student. However, performance of all examination i.e. previous to improvement examination, shall be reflected in the transcript.

2.34 Rules of Different Examinations (Subject to change for different academic session)

2.34.1 Term Final Examination

Following rules to be followed:

- a. Registration to be completed before commencement of the Term. A student has to register his desired courses paying registration, examination fee and other related fees.
- b. Late registration will be allowed without penalty within first two weeks of the term.
- c. Within 1st two weeks of a term a student can Add/Drop course/courses. To add a course, in the 3rd week, one has to register the course by paying additional fees. To drop a course, one has to apply within three weeks and paid fees will be adjusted/refunded. If anyone wants to drop a course after three weeks and within 4 weeks, that will be permitted but paid fees will not be refunded in that case.
- d. Registrar office will finalize registration of all courses within 7 (seven) weeks, issue

registration slips and that will be followed by issuing Admit Card.

e. Term Final Examination to be conducted in the 18-20th week of the term as per approved Academic Calendar.

2.34.2 Supplementary Examination

Following rules are to be followed:

- a. Supplementary-I is defined as provision of giving exam in the first week of Spring Term (Jan-Jun) / Fall Term (Jul-Dec) end break and Supplementary-II in the first week of Fall Term (Jul-Dec) / Spring Term (Jan-Jun) end break, respectively.
- b. Students will be allowed to register for a maximum of two theory courses (Failed/Improvement) in Supplementary-I and maximum of one theory course (Failed/Improvement) in Supplementary-II. However, with the approval of Commandant, in special circumstances, departments may allow students to register for a maximum of one theory courses (Failed/Improvement) in Supplementary-II and maximum of two theory courses (Failed/Improvement) in Supplementary-II. Total courses to register by a student in supplementary examination in a year cannot be more than three,
- c. No class will be conducted.
- d. 40% marks will be considered from the previous exams.
- e. Maximum grading in Supplementary Exam will be 'B+'.
- f. No Sessional Exam will be conducted.
- g. Examination will be taken on 60% marks like Term Final Examination.
- h. If a student fails in a course more than once in regular terms, then for calculating 40% marks best one of all continuous assessment marks will be counted.
- i. If anyone fails in the laboratory/sessional course, that course cannot be taken in the supplementary examination.
- j. If any student fails in a course, he can clear the course retaking it 2nd time or, he can clear the examination appearing at the supplementary examination as well. Any one fails twice in a course, can only retake it in the regular term for appearing third time. But anyone fails even after appearing third time. He/she has to take approval of Academic Council of MIST for appearing 4th (last) time in a course and need to pay extra financial penalty. If any student fails even 4th time in a course, will not be allowed to appear anymore in this same course.
- k. Registration of Supplementary-I Exam to be done within 5th wk. after completion of Fall Term (July to Dec) and registration of Supplementary-II exam to be done during the Mid-Term break of Spring Term (Jan to Jun), paying all the required fees.
- 1. There will be no provision for add/drop courses after registration.
- m. Question Setting, Moderation, and Result Publication to be done following the same rules of Spring (Jan to Jun) / Fall (July to Dec) Term Final Exam as per existing Examination Policy.
- n. Moderation of the questions for Supplementary-I will be done in the 5th week after completion of Fall Term (July to Dec) Final Exam and Supplementary-II with the moderation of the questions of Spring Term (Jan to Jun).
- o. Separate Tabulation sheet to be made.

p. <u>Thesis:</u> if a student cannot complete thesis in two consecutive terms, with the recommendation of the supervisor, he/she may continue for next one/two term within six academic years.

2.34.3 Improvement Examination

Following rules to be followed:

- a. Improvement examination is to be taken during the Supplementary-I and Supplementary-II examinations.
- b. For Improvement examination, registration is to be done during the registration of Supplementary-I and Supplementary-II examinations by paying all the fees.
- c. Question Setting, Moderation and Result Publication to be done with courses of Supplementary-I and Supplementary-II examinations.
- d. Any student gets a grading below 'B+' and desires to improve that course; he will be allowed to appear the improvement examination for that particular course.
- e. Highest grade of Improvement examination will be 'B+'.
- f. One student is allowed to appear at Improvement exam in 6 (six) courses in his whole graduation period taking maximum two courses at a time (two courses at supplementary-I and one course at supplementary-II).

2.35 Irregular Graduation

If any graduating student clears his/her failed course in Spring Term/Fall Term/ Supplementary examinations and his graduation requirements are fulfilled, his graduation will be effective from the result publication date of Spring Term/Fall Term/Supplementary examinations and that student will be allowed to apply for provisional certificate.

CHAPTER 3

DEPARTMENT OF NAVAL ARCHITECTURE AND MARINE ENGINEERING

3.1 Introduction to the program

Our Lord, Almighty, has created human beings in a state of weakness, but blessed with extra ordinary divine intelligence and engineers amongst us who could perceive the need of time. In this regard, maritime related engineering is one of the important aspects in the history of civilization and ships are one of the oldest forms of transport used by human beings.

Naval architecture has been an inherent part of the evolution of ships or crafts, and naval architecture and marine engineering is a very interesting branch of study. Graduates in this field of study have actually dual degrees. In one way these graduates are naval architects, and another way they are marine engineers. Study in NAME provides insight to design, to build, to operate and to maintain vessels which move just above, on or under the sea. It can be said that naval architects connect nation to nation and civilization to civilization through rivers, seas and oceans. Basically, a good naval architect is he who can acquire required knowledge of designing and building marine vehicles satisfactorily and utilize such knowledge for the benefit of mankind.

To be prepared for the professional tasks, students of naval architecture are primarily studying hydrodynamic theories and concerned computational methods to develop efficient hull form to be operated at desired movability with minimum energy consumption. Secondly, they have to go through material science in depth to build better quality ships to be sustainable in unfriendly weather conditions at sea. As the field of naval architecture is the part and parcel of mechanical engineering, it is impossible to be a good naval architect without being a good mechanical engineer, and knowledge on mechanics, theory of machine, heat transfer, diesel engine, gas turbine, nuclear power, fuel cells, pumps, compressor, refrigeration, air-conditioning etc. is taught on the curriculum for ensuring that. Moreover, machinery controls, whether it is mechanical, pneumatic or electronic, control engineering expertise for the marine engineers is also required.

Above all, today's technology is computer based and no ship is designed without the use of software. It is now the demand of the day to have upper hand on computer programming language and numerical simulations to bring forward what the graduating students are principally learning in the field of naval architecture and marine engineering. The last but not the least is the humanities and the management for efficient cost estimation, human resource management and enhancement of leadership.

3.2 Vision and Mission of the Program

- a. <u>Vision</u>. To be national and international centre of excellence offering a study programme of high quality, innovation and creativity in the field of Naval Architecture and Marine Engineering.
- b. <u>Mission</u>. The department of Naval Architecture and Marine Engineering (NAME) has the following mission:

MD1 Provide quality education to the students by establishing a comprehensive, rigors curriculum that places equal emphasis on theoretical and practical principles, and make it

available to students at both the undergraduate and graduate levels.

MD2 Developing ethical values amongst the students combined with communication and leadership skills.

MD3 Through research and development enable the students to contribute in nation's economy with collaboration with the industries.

3.3 Faculty Member of NAME

- a. Military Faculty Members
 - Commodore A H M Rafiqul Islam, (E), NUP, psc, BN
 - Commander Ehtasham Ahmed Quraishi, (E), BN
 - Lt Col Muhammad Rabiul Islam, PhD, EME
 - Cdr Tasnuva Anan, (E), psc, BN
 - Lt Col Osman Md Amin, PhD, Engrs
 - Lt Cdr Khalid Ahmed, (E), BN

b. <u>Civil Faculty Members</u>

- Assistant Professor Dr. S M Ikhtiar Mahmud
- Assistant Professor Md. Mezbah Uddin
- Lecturer Tasmia Hoque
- Lecturer Shahan Malek Usham
- Lecturer Maher Niger Prova
- Lecturer Fatema Akter
- Lecturer Rakibul Azad Tawhid
- Teaching Assistant Zarin Tahsin
- Teaching Assistant Ridoy Karmoker Rudro

<u>3.4 Facilities of the Department</u>

The NAME department endeavors to provide its faculty members and students adequate laboratory, library and other facilities to undertake undergraduate courses. Since the engineering education is laboratory intensive, following laboratories are catered for such requirements:

- (1) Computer Aided Ship Design Lab
- (2) Marine Hydrodynamics Lab
- (3) Towing Tank and Stability Test Lab
- (4) Ship Structure and Fabrication Lab
- (5) Ship Model Fabrication Lab
- (6) Marine Machinery Lab
- (7) Damage Control, Fire Fighting and Life Saving Lab
- (8) Ship Resistance Lab
- (9) Ship Propulsion Lab
- (10) Ship Instrument Lab
- (11) Auxiliary Machinery Lab
- (12) Marine Electronics Lab

In addition to above laboratories, NAME students have to undertake laboratory courses (sessional) in Physics, Chemistry, Workshop, Electrical Engineering and Civil Engineering too. If necessary

undergraduate students can have the access to the facilities of other departments and centers during their project, thesis and research works.

Besides the stated laboratories, NAME department has established "Ship Design and Marine Structural Solution Center" to take the challenge of professional engineering to an eminent level.

3.5 Program-Specific Criteria

Criteria for Naval Architecture and Marine Engineering or Similar Program according to BAETE Manual 2.1 have been described in this paragraph. The program must prepare graduates to apply probability and statistical methods to naval architecture and marine engineering problems; to have basic knowledge of fluid mechanics, dynamics, structural mechanics, materials properties, hydrostatics, and energy/propulsion systems in the context of marine vehicles; and to have familiarity with instrumentation appropriate to naval architecture and/or marine engineering.

3.6 Program Educational Objectives (PEOs)

No	PEO Statement
PEO-1	Graduates of Naval Architecture and Marine Engineering will develop a sound knowledge on mathematical, scientific and engineering fundamentals and advanced knowledge of understanding in the sector of ship design, ship building and marine engineering including analysis techniques, design, developments and implementation methodologies to solve critical technical problems related to this field.
PEO-2	Graduates of Naval Architecture and Marine Engineering will acquire technical and communicative knowledge with professional and industry-based education to build up successful professional careers in shipbuilding and maritime industries, government organizations and academia.
PEO-3	Graduates of Naval Architecture and Marine Engineering will understand sustainable engineering practice, socio-ethical values and life-long continuous learning to adapt the innovation and changes in this sector.
PEO-4	Graduates of Naval Architecture and Marine Engineering will be capable of working in the broader area of technology having the capability and responsibility of leadership and teamwork.
PEO-5	Graduates of Naval Architecture and Marine Engineering will be able to positively contribute in national and global cultural, social, technological, economic and educational development of society through the ethical application of their knowledge and skills.

3.7 Program Outcomes (POs)

Program Outcomes (POs) or graduate attributes are narrower statements that describe what students are expected to know and be able to do by the time of graduation. These statements relate to the knowledge, skills and attitudes acquired by students while progressing through the program. Based on the suggestion of Board of Accreditation for Engineering and Technical Education (BAETE), Bangladesh, the Naval Architecture and Marine Engineering (NAME) program has following 12 Program Outcomes:

a) Apply knowledge of mathematics, natural science, engineering fundamentals and an engineering specialization as specified in K1 to K4 respectively to the solution of complex

engineering problems.

- b) Identify, formulate, research literature and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences and engineering sciences. (K1 to K4)
- c) Design solutions for complex engineering problems and design systems, components or processes that meet specified needs with appropriate consideration for public health and safety, cultural, societal, and environmental considerations. (K5)
- d) Conduct investigations of complex problems using research-based knowledge (K8) and research methods including design of experiments, analysis and interpretation of data, and synthesis of information to provide valid conclusions.
- e) Create, select and apply appropriate techniques, resources, and modern engineering and IT tools, including prediction and modelling, to complex engineering problems, with an understanding of the limitations. (K6)
- f) Apply reasoning informed by contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to professional engineering practice and solutions to complex engineering problems. (K7)
- g) Understand and evaluate the sustainability and impact of professional engineering work in the solution of complex engineering problems in societal and environmental contexts. (K7)
- h) Apply ethical principles and commit to professional ethics and responsibilities and norms of engineering practice. (K7)
- i) Function effectively as an individual, and as a member or leader in diverse teams and in multidisciplinary settings.
- j) Communicate effectively on complex engineering activities with the engineering community and with society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- k) Demonstrate knowledge and understanding of engineering management principles and economic decision-making and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- 1) Recognize the need for and have the preparation and ability to engage in independent and lifelong learning in the broadest context of technological change.

Ser	PEO 1	PEO 2	PEO3	PEO4	PEO 5
PO-a	Yes	No	No	No	No

PO-k	No	Yes	No	Yes	Yes
PO-1	No	No	Yes	No	No

3.9 Course Outcomes (COs)

The Course Outcomes (COs) are the resultant knowledge skills the student acquires at the end of a course. It defines the cognitive processes a course provides. Chapter five contains the detailed Learning/Course Outcomes for each of the courses under the heading of Course Outcomes(COs). Faculty members are allowed to modify the Course Outcome (CO) as Continuous Quality Improvement (CQI) while conducting a course on the basis of requirements consulting with Head of the department and senior faculty members having expertise and specialization of that respective course.

3.10 Course Contents

The course contents of all courses have been described in chapter five. Faculty members are allowed to modify the course contents as a part of Continuous Quality Improvement (CQI) while conducting a course on the basis of requirements consulting with Head of the department and senior faculty members having expertise and specialization of that respective course.

3.11 Bloom's Taxonomy

Bloom's Taxonomy is a classification system used to define and distinguish different levels of human cognition i.e., thinking, learning, and understanding. Typically, Bloom's Taxonomy is used to inform or guide the development of Assessments (tests and other evaluations of student learning), Curriculum (units, lessons, projects, and other learning activities), and instructional methods such as questioning strategies. There are three learning domains of Bloom's Taxonomy.

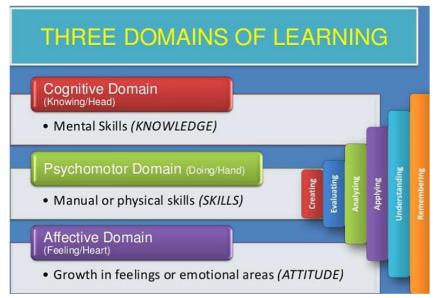

Figure 3.1: The Learning Domains of Bloom's Taxonomy (OBE Based Curriculum UGC 2020)

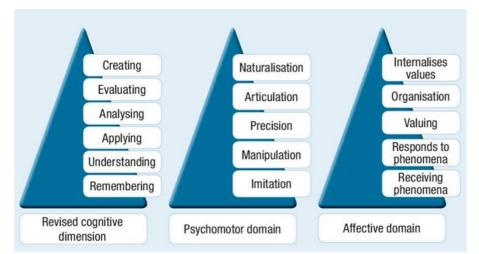

Figure 3.2: Three Domains of Bloom's Taxonomy (OBE Based Curriculum UGC 2020)

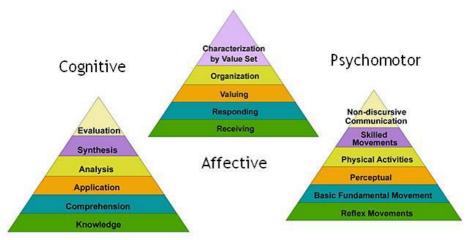

Figure 3.3: Levels of three Domains of Bloom's Taxonomy (OBE Based Curriculum UGC 2020)

3.12 Washington Accord

The graduate attributes adopted by the Washington Accord signatories are generic to the education of professional engineers in all engineering disciplines. They categorise what graduates should know, the skills they should demonstrate and the attitudes they should possess. The Washington Accord Graduate Attribute Profile has 12 elements, supported by attributes of Knowledge Profile (K1 – K8), Ranges of Complex Problem Solving (P1 – P7) and Complex Engineering Activities (A1 – A5).

3.12.1 Knowledge Profile

ne wash	lington Accord Knowledge i forne has eight elements.
	Attribute
K1	A systematic, theory-based understanding of the natural sciences applicable to the
	discipline
K2	Conceptually based mathematics, numerical analysis, statistics and the formal aspects of computer and information science to support analysis and modeling applicable to the discipline
К3	A systematic, theory-based formulation of engineering fundamentals required in the engineering discipline

The Washington Accord Knowledge Profile has eight elements:

K4	Engineering specialist knowledge that provides theoretical frameworks and bodies of knowledge for the accepted practice areas in the engineering discipline; much is at the forefront of the discipline
K5	Knowledge that supports engineering design in a practice area
K6	Knowledge of engineering practice (technology) in the practice areas in the engineering discipline
K7	Comprehension of the role of engineering in society and identified issues in engineering practice in the discipline: ethics and the engineer's professional responsibility to public safety; the impacts of engineering activity; economic, social, cultural, environmental and sustainability
K8	Engagement with selected knowledge in the research literature of the discipline

3.12.2 Ranges of Complex Engineering Problem Solving

Complex Engineering Problems have characteristic P1 and some or all of P2 to P7:

Attribute	Characteristics
Depth of knowledge	P1: Cannot be resolved without in-depth engineering knowledge at
required	the level of one or more of K3, K4, K5, K6 or K8 which allows a
	fundamentals-based, first principles analytical approach
Range of conflicting	P2: Involve wide-ranging or conflicting technical, engineering and
requirements	other issues
Depth of analysis	P3: Have no obvious solution and require abstract thinking,
required	originality in analysis to formulate suitable models
Familiarity of issues	P4: Involve infrequently encountered issues
Extent of applicable	P5: Are outside problems encompassed by standards and codes of
codes	practice for professional engineering
Extent of stakeholder	P6: Involve diverse groups of stakeholders with widely varying needs
involvement and	
conflicting requirements	
Interdependence	P7: Are high-level problems including many component parts or sub-
	problems

3.12.3 Range of Complex Engineering Activities

Complex activities mean (engineering) activities or projects that have some or all of the following characteristics:

Attribute	Characteristics			
Range of resources	A1: Involve the use of diverse resources (and for this purpose resources include people, money, equipment, materials, information and technologies)			
Level of interaction	A2: Require resolution of significant problems arising from interactions between wide-ranging or conflicting technical, engineering or other issues			
Innovation	A3: Involve creative use of engineering principles and research-based knowledge in novel ways			
Consequences for society and the environment	A4: Have significant consequences in a range of contexts, characterized by difficulty of prediction and mitigation			
Familiarity	A5: Can extend beyond previous experiences by applying principles- based approaches			

3.13 Relationship/Mapping between Mission of the Dept and the Institution

		Mission of MIST				
Ser No	Mission statement of NAME	Mission statement 1	Mission statement 2	Mission statement 3	Mission statement 4	
1	Provide quality education to the students by establishing a comprehensive, rigors curriculum that places equal emphasis on theoretical and practical principles, and make it available to students at both the undergraduate and graduate levels.	Yes	Yes	No	No	
2	Developing ethical values amongst the students combined with communication and leadership skills.	No	Yes	Yes	Yes	
3	Through research and development enable the students to contribute in nation's economy with collaboration with the industries.	No	Yes	Yes	No	

3.14 Relationship/Mapping between PEO and Mission of the Institution

Ser No.	PEO statement	Mission statement	statement		Mission statement
		1	2	3	4
1	Graduates of Naval Architecture and Marine Engineering will develop a sound knowledge on mathematical, scientific and engineering fundamentals and advanced knowledge of understanding in the sector of ship design, ship building and marine engineering including analysis techniques, design, developments and implementation methodologies to solve critical technical problems related to this field.	Yes	Yes	No	No
2	Graduates of Naval Architecture and Marine Engineering will acquire technical and communicative knowledge with professional and industry-based education to build up successful professional careers in shipbuilding and maritime industries, government organizations and academia.	Yes	No	Yes	No
3	Graduates of Naval Architecture and Marine Engineering will understand sustainable engineering practice, socio-ethical values and life-long continuous learning to adapt the innovation and changes in this sector.	No	Yes	No	Yes
4	Graduates of Naval Architecture and Marine	No	No	Yes	Yes

	Engineering will be capable of working in the broader area of technology having the capability and responsibility of leadership and teamwork.				
5	Graduates of Naval Architecture and Marine Engineering will be able to positively contribute in national and global cultural, social, technological, economic and educational development of society through the ethical application of their knowledge and skills.	Yes	Yes	No	Yes

3.15 Relationship/Mapping between PEO and Mission of the Dept

Ser		Mission of NAME Dept			
Ser No	Program Educational Objectives (PEOs)	Mission	Mission	Mission	
INU		statement 1	statement 2	statement 3	
1	Graduates of Naval Architecture and Marine Engineering will develop a sound knowledge on mathematical, scientific and engineering fundamentals and advanced knowledge of understanding in the sector of ship design, ship building and marine engineering including analysis techniques, design, developments and implementation methodologies to solve critical technical problems related to this field.	Yes	No	Yes	
2	Graduates of Naval Architecture and Marine Engineering will acquire technical and communicative knowledge with professional and industry-based education to build up successful professional careers in shipbuilding and maritime industries, government organizations and academia.	Yes	Yes	No	
3	Graduates of Naval Architecture and Marine Engineering will understand sustainable engineering practice, socio-ethical values and life-long continuous learning to adapt the innovation and changes in this sector.	No	Yes	Yes	
4	Graduates of Naval Architecture and Marine Engineering will be capable of working in the broader area of technology having the capability and responsibility of leadership and teamwork.	Yes	Yes	No	
5	Graduates of Naval Architecture and Marine Engineering will be able to positively contribute in national and global cultural, social, technological, economic and educational development of society through the ethical application of their knowledge and skills.	No	Yes	Yes	

3.16 Generic Skills

The graduates of the NAME program are expected to have the following generic skills:

- a. Ability to apply the principles and theory of Naval Architecture and Marine Engineering knowledge to the requirements, design and development of different ship and marine systems with appropriate understanding.
- b. Ability to define and use appropriate research methods and modern engineering tools.
- c. Ability to apply critical thinking to solve complex engineering problems and design innovative solutions.
- d. Ability to analyze real-time problems and justify the appropriate use of technology.
- e. Ability to work effectively as an individual, and as a member or leader of a team in diverse situations and exhibit social responsibility.

3.17 Curriculum/Skill Mapping

The courses of NAME program a redesigned in such a way that the corresponding Course Outcomes (COs) contribute to the 12 Program Outcomes (POs) which eventually achieves the mission and vision of the program. Chapter five contains the mapping for each of the courses. However, generic curriculum/skill mapping is shown in Figure 3.4.

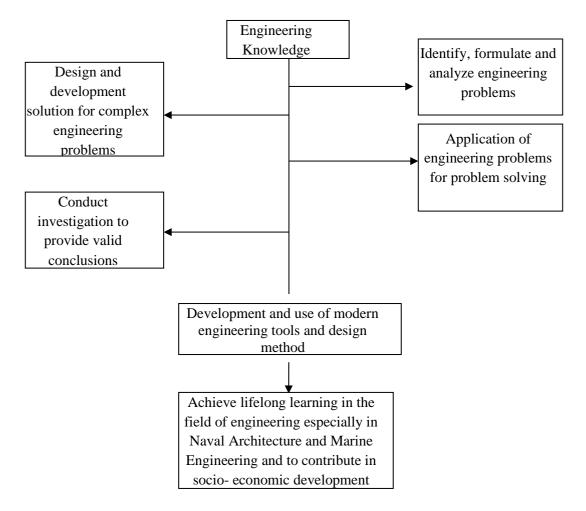

Figure 3.4: Generic Skills Mapping

CHAPTER 4

COURSE CURRICULUM OF BACHELOR IN NAME

4.1 Course Schedule

Keeping the above-mentioned program outcomes, the course schedule for the undergraduate students of the Department of Naval Architecture and Marine Engineering (NAME) is given below.

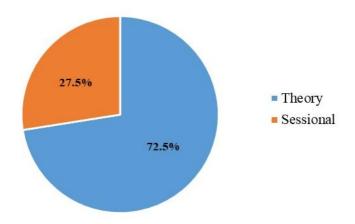

4.1.1 Summary of Course Curriculum

Sam	Catagory	No of Courses		Cr. Hr.		Total	% of Total
Ser	Category	Theory	Sessional	Theory	Sessional	Cr. Hr.	Cr. Hr.
1.	Languages/						
	Communicative	-	2	-	3.0	21.0	13.1
	Language					21.0	15.1
2.	General Education	8	1	16.0	2.0		
3.	Basic Science	3	2	9.0	3.0	24.0	15.0
4.	Mathematics	4	-	12.0	-	24.0	15.0
5.	Interdisciplinary /Other Engineering	3	5	10.0	7.5	17.5	10.9
6.	Program Core	19	18	57.0	28.5	85.5	53.5
7.	Technical	4	_	12.0	_	12.0	7.5
	Electives	+	-	12.0	-	12.0	1.5
	Total	41	28	116.0 (72.5%)	44.0 (27.5%)	160.0	100

4.1.2 Contact hours and credit hours' distribution in eight terms

Level & Term	Theory Credit Hours	Sessional Credit Hours	Total Credit Hours	Cumulative Cr. Hr.	Theory Contact Hours	Sessional Contact Hours	Total Contact Hours
1-I	14.0	6.0	20.0	20.0	14.0	12.0	26.0

4.2.2 List of Elective/Optional Courses

i. One language lab course will be registered for level 2 term I as offered from the following list:

Ser.	Course Code	Course Title	Type of Course	Credit Hour	Level & Term
1.	LANG 202	Advanced Communicative English	Sessional	1.50	L-2, T-I
2.	LANG 204	Bangla Language and Literature	Sessional	1.50	L-2, T-I

ii. One theoretical course will be registered for level 3 term II as offered from the following list (Optional 1):

Ser.	Course	Course Title	Type of	Credit	Level &
Sel.	Code	Course rule	Course	Hour	Term
3.	NAME 335	Computer Aided Ship Production	Theory	3.00	L-3, T-II
4.	NAME 337	Inland Water Transportation System	Theory	3.00	L-3, T-II
5.	NAME 371	Finite Element Method for Ship Structure	Theory	3.00	L-3, T-II
6.	NAME 387	Port and Harbor Engineering	Theory	3.00	L-3, T-II
7.	NAME 389	Shipbuilding Project Management	Theory	3.00	L-3, T-II

iii. One theoretical course will be registered at the first term of level four and two courses at the second term of level four as offered from the following list (Optional 2,3,4):

8.	NAME 431	Ship Hull Vibration	Theory	3.00	L-4, T-I/II
9.	NAME 445	Dredger and Dredging Technology	Theory	3.00	L-4, T-I/II
10.	NAME 447	Maritime Transportation System	Theory	3.00	L-4, T-I/II
11.	NAME 453	Power and Propulsion System	Theory	3.00	L-4, T-I/II
12.	NAME 463	Ship Performance	Theory	3.00	L-4, T-I/II
13.	NAME 465	Navigation and Maritime Regulations	Theory	3.00	L-4, T-I/II
14.	NAME 473	Computational Fluid Dynamics (CFD)	Theory	3.00	L-4, T-I/II
15.	NAME 475	Composite Materials	Theory	3.00	L-4, T-I/II
16.	NAME 477	Control Engineering	Theory	3.00	L-4, T-I/II
17.	NAME 481	Optimization Method in Ship Design	Theory	3.00	L-4, T-I/II
18.	NAME 483	Theory of Hydrofoils	Theory	3.00	L-4, T-I/II
19.	NAME 489	Introduction to Offshore Structure	Theory	3.00	L-4, T-I/II
20.	NAME 499	Shipyard Management	Theory	3.00	L-4, T-I/II

4.2.3 List of Interdisciplinary Courses

Ser.	Course	Course Title	Type of	Credit	Level &
Sel.	Code	Course The	Course	Hour	Term
1.	CSE 115	Computer Programming Language	Theory	3.00	L-1, T-II
2.	CSE 116	Computer Programming Language Lab	Sessional	1.50	L-1, T-II
3.	EECE 281	Marine Electrical and Electronics	Theory	4.00	L-2, T-II
4.	EECE 382	Marine Electrical and Electronics Lab	Sessional	1.50	L-3, T-I
5.	ME 150	Mechanical Engineering Drawing	Sessional	1.50	L-1, T-I
6.	SHOP 180	Workshop Practice	Sessional	1.50	L-1, T-I
		(Foundry, Welding and Machine Shop)		1.30	L-1, 1-1
7.	ME 277	Heat Transfer	Theory	3.00	L-2, T-II
8.	ME 278	Heat Transfer Lab	Sessional	1.50	L-2, T-II

4.2.4 List of Basic Science and Mathematics Courses

Ser.	Course Code	Course Title	Type of Course	Credit Hour	Level & Term

4.3 Teaching Strategy

Multiple teaching and learning activities are necessary to achieve the intended outcomes, since students have different learning styles. It is therefore, the NAME department planned to choose appropriate teaching and learning methods that will foster student's engagement in the learning process rather than students listening to the lectures passively. Student centred learning is about active participation of students in the classroom, and that active participation will be achieved by content/curriculum, teacher's interaction with the students and the environment that are directed towards students learning. The strategy includes:

a. Face-to-Face Learning

- 1. Lecture /Presentation/ Discussion
- 2. Practical / Tutorial / Studio
- 3. Case Studies
- 4. Assignment/Quiz
- 5. Group discussion/projects
- 6. Design and Research

b. Self-Directed Learning

- Non-face-to-face learning
- Revision
- Preparation of presentation
- Preparation of Lab Reports
- Preparation of Lab Test
- Engagement in Group ProjectsPreparation of Assignment/Quiz
- Preparation for final Examination

Details of teaching strategy for each of the courses under the heading of Teaching Learning Strategy is given in Chapter 5.

<u>CHAPTER 5</u> COURSE DESCRIPTION

5.1 Program Core Courses

COURSE INFORMATION

Course Code: NAME 107 Course Title: Introduction to Naval Architecture and Marine Engineering Level and Term: Level 1 Term I

Credit Hours: 3.0 Contact Hours: 3.0

PRE-REQUISITE

None

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

Introduction to Naval Architecture and Marine Engineering is compulsory theoretical course which will give a brief overview on basic naval architectural and marine engineering knowledge e.g. naval architectural terms, ship dimensions and forms, various drawings in ship design. It also enables students to familiarize themselves with ship propulsion system and machinery.

OBJECTIVES

- 1. To know ship's different terminology and identify them.
- 2. To make proficient to describe concepts regarding specification of ships dimensions and forms.
- 3. To enable achieving ability to explain displacement, lightweight, deadweight, capacity and tonnage.
- 4. To enable to apply approximation methods to calculate area, centroid & volume.
- 5. To familiarize with General Arrangement (GA), shell expansion & lines plans.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. Illustrate ship's different terminology, various drawings and calculation.
- 2. Comprehend basic ideas of specification of ships dimensions and forms, tonnage.
- 3. Calculate hydrostatic particulars & prepare vessel's displacement curve.
- 4. Identify & describe various components of marine engine and systems.

COURSE CONTENTS

- a. Introduction to the course and naval architecture
- b. The shape of a ship, Ship particulars, definition of various ship terms
- c. Area, moments and centre of gravity calculations
- d. Weight and centre of gravity, displacement and centre of buoyancy, Archimedes law of floating bodies
- e. Light weight, dead weight, capacity and tonnage, Sub-division elements of ship hull
- f. Ship's form coefficients, their applicability and significance, calculation of form coefficients

- g. Numerical integration in naval architecture: Simpson's rules, trapezoidal rule, five-eightminus one rule, application of these rules to find area, moment (first and second) of area, centre of gravity calculation etc., errors and limitation of these rules.
- h. Ship geometry definition and representation, lines plan and offset table, sectional area curve and its uses.
- i. Ship design procedure, various ship drawings and their content, use of these drawings.
- j. Introduction to ship propulsion arrangements, ship's propulsion system and her machinery; deck machinery; arrangement of machinery
- k. Introduction to ship systems: bilge ballast system, FO bunkering and delivery system, FW system; fire-fighting system, black and grey water system, power generation and distribution system etc.
- 1. Various ship fittings; spares; consumables and stores
- m. Study of engine: Types of engines, various parts, sequence of operation, Two stroke and Four stroke engine etc

COURSE SCHEDULE

Week	Contents	Assessment
Week 1	Ship's terms	
Class 1	Introduction to NAME	
Class 2	Brief discussion on syllabus, Class Test (CT), mid-term and final exam, mark distribution	
Class 3	$L_{OA,}$ L_{BP} , L_{WL} , moulded breadth, moulded depth, moulded draught, freeboard, air draft, camber, sheer	
Week 2	Ship's terms	CT-1, Final
Class 4	Flare, stem, stern; skeg; transom; deck; poop deck; forecastle deck; 'tween deck; deckhouse and superstructure;	Exam
Class 5	Ship's weight and centre of gravity, longitudinal centre of gravity (LCG); vertical centre of gravity (VCG); importance of LCG and VCG in ship design; trim; heel and list;	
Class 6	Displacement, longitudinal centre of buoyancy, vertical centre of buoyancy, Archimedes principle; Six degrees of motion of a ship: surge, sway, heave, roll, pitch and yaw;	
Week 3	Ship's terms	
Class 7	Light weight, dead weight, capacity; tonnage: net tonnage and gross tonnage; International Convention on Tonnage Measurement of Ships, 1969.	
Class 8	Bulkhead: longitudinal and transverse, cofferdam, double bottom; double hull;	
Class 9	Miscellaneous terminology related to ship and ocean structure;	
Week 4	Hull form coefficients	
Class 10	Block coefficient, midship section coefficient, prismatic coefficient, water plane area coefficient,	
Class 11	Problem on form coefficients	
Class 12	Assessment 01 (CT-1)	
Week 5	Numerical integration in Naval Architecture [part 1]	CT-2, Mid
Class 13	Numerical integration in naval architecture; the trapezoidal rule; error of	Term, Final

	integration in trapezoidal rule;	Exam							
Class 14	Mathematical problems on trapezoidal integration;								
Class 15	Simpon's first rule; intermediate ordinate								
Week 6	Numerical integration in Naval Architecture [part 2]								
Class 16	Simpson's second rule; intermediate ordinate;								
Class 17	Five-eight-minus one rule, six ordinates rule;								
Class 18	Problems of Simpson's first and second rule;								
Week 7	Ship geometry								
Class 19	Ship coordinate system; ship geometry definition: keel; rise of floor; fall								
	in side; bilge radius; tumble home; parallel middle body; entrance, run;								
	angle of entrance; deadrise angle; kunckle; bulbous bow								
Class 20	lass 20 Station; waterline; buttock; diagonal; sectional area curve and its uses;								
Class 21									
Week 8	Ship design procedure and main drawings								
Class 22	Ship design process; Basic (main) drawings in ship design;	Mid Term							
Class 23	IACS and its members; mission and vision of IACS;	Exam, Final							
Class 24	General arrangement (GA) drawing of different types of ships;	Exam							
Week 9	Main (Basic) drawings in ship design								
Class 25									
Class 26									
Class 27									
Week 10									
Class 28									
Class 29	Machinery & equipment fitted onboard ship,								
	Machinery & fittings fitted on ship propulsion system								
Class 30	Assessment 02(Mid-term exam)								
Week 11	Ship propulsion system & Machinery								
Class 31	Main propulsion engine, heat engine basics.								
Class 32	Classification of engine								
Class 33	Cycle of operation of engine								
Week 12	Ship propulsion system & Machinery	CT-3/							
Class 34	Parts of engine	Assignment,							
	Difference between diesel & petrol engine	Final Exam							
Class 35	Basic idea about other power generation machinery								
Class 36	Revision of Ship propulsion system & Machinery								
Week 13	Ship systems								
Class 37	Introduction to ship systems: bilge ballast system, FO bunkering and								
	delivery system,								
Class 38	FW system; fire-fighting system, black and grey water system								
Class 39	Power generation and distribution system etc.								
Week 14	Ship propulsion system & machinery								
Class 40	Basic idea ship fittings, spares, consumables and stores.								
Class 41	Assessment 04 (CT-3)								
Class 42	Course review

COURSE INFORMATION

Course Code: NAME 157 **Course Title:** Hydrostatics and Stability **Level and Term:** Level 1 Term II Credit Hours: 3.00 Contact Hours: 3.00

PRE-REQUISITE None

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

This is a compulsory course enables students to learn the principles of equilibrium of forces act on a floating body, means to asses intact and damage stability of ships and their statutory requirements. This course also deals with launching of ships once it is built as well as the inclining experiment, which measures the weight and centre of gravity of lightship.

OBJECTIVES

- 1. To impart knowledge on the fundamental principles of equilibrium, buoyancy, and stability in ships.
- 2. To enable to calculate and interpret hydrostatic properties for ship design and analysis.
- 3. To make proficient to stability principles and regulations to ensure safe ship operation.
- 4. To enable to explain the effects of damage and flooding on ship stability and perform inclining experiments and stability calculations.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. Understand the fundamental principles of equilibrium, buoyancy, and stability in ships.
- 2. Calculate and interpret hydrostatic properties for ship design and analysis.
- 3. Apply stability principles and regulations to ensure safe ship operation.
- 4. **Explain** the effects of damage and flooding on ship stability and **perform** inclining experiments & stability calculations.

COURSE CONTENTS

- 1. Introduction; concepts of equilibrium; weight and centre of gravity; displacement and centre of buoyancy.
- 2. Initial stability; metacentric height: longitudinal and transverse metacentre; metacentric diagram.
- 3. Hydrostatic properties; hydrostatic and Bonjean curves; their uses.
- 4. Statical stability, righting arm; curves of statical stability and its application; cross curves of stability and its uses, effect of trim, depth and form on statical stability; significance of curve of statical stability; dynamical stability and its measurement;
- 5. Free surface effect; calculation of free surface moments; effect of free surface on righting lever curves; means to reduce free surface effect.
- 6. Weight and trim calculations; effect of change of water density; top weight etc.
- 7. Inclining experiment: purpose; preparation; experiment; calculation and generation of report.

- 8. Intact stability: measurement of stability; IMO code of intact stability: mandatory criteria for all ships; stability criteria for special purpose ships; weather criterion; wind heeling moment; intact stability load cases.
- 9. Subdivision and damage stability: effects of damage of ship hull; SOLAS conventions; watertight subdivisions, curves of floodable length; permeability; evaluation of damage stability: added weight and lost buoyancy method; deterministic and probabilistic means to assess damage stability; sub-division length; factor of subdivision; required subdivision index; attained subdivision index;
- 10. Stability during dry-docking; launching calculations.

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

This is a compulsory sessional course designed to teach students about the basic design drawings of different types of ship. Students will be able to perform necessary calculations related to the basic design, trim and stability calculations. It is expected that students can develop critical thinking behind each design features, able to check effects of those features using calculations and finally select the appropriate feature.

OBJECTIVES

- 1. To familiarize students with different types of ships, their General Arrangement and enable them to produce the same.
- 2. To acquaint students with the Lines Plan and teach them to draw Lines Plan in different scales including Bonjean curves.
- 3. To enable students to compute hydrostatic properties and to evaluate trim and stability calculations
- 4. To analyze inclining experiment data for stability assessment.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. **Apply** fundamental ship design principles to develop a general arrangement (GA) plan.
- 2. Generate and analyze lines plans and Bonjean curves for basic ship hull forms.
- 3. **Compute** hydrostatic properties of ships to produce hydrostatic curves and **prepare** trim and stability calculation on ship design.
- 4. Analyze and interpret inclining experiment data for stability assessment.

COURSE CONTENTS

- 1. General arrangement (GA) plan drawing,
- 2. Lines plan drawing, Bonjean curves,
- 3. Hydrostatic calculations, and Stability and cross curves,
- 4. Trim calculations,
- 5. Inclining Experiment.

None

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

This course will provide the basic knowledge of thermal engineering, which will function as foundation in applications in major fields of Naval Architecture and Marine Engineering notably in heat engines, air conditioning, refrigeration, steam turbine and gas turbine system.

OBJECTIVES

- 1. To introduce the basic concepts of thermodynamics, laws of thermodynamics and practical applications of thermodynamics
- 2. To familiarize with various types of air standard cycles and their applications.
- 3. To explain the properties of steam using steam tables and calculate steam properties like saturated temperature, enthalpy, and entropy.
- 4. To recognize the various machinery components found on ships or other systems and evaluate the overall system performance considering individual component efficiencies.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. Describe the basic concepts of Thermal Engineering.
- 2. Explain and apply basic thermodynamic principles and laws to analyze and predict performance of idealized forms of thermodynamics systems.
- 3. Relate idealized thermodynamic cycles to corresponding real systems and explain and calculate the properties related to steam.
- 4. Identify the components and understand the operations of machineries onboard and perform calculations of their efficiency.

COURSE CONTENTS

1. Introduction and Basic Concepts of Thermodynamics and Thermal Engineering

Basic concepts of thermodynamics: introduction, applications, system, surrounding universe, zeroth law, properties of a system, state, process, path function, cycle, pure substance, control volume, work interaction and closed system work. Ideal gas equation for various process, closed system work for various process, open system work for various process.

2. First Law and its application (Non-Flow Process)

Concept of heat and specific heat, first law of thermodynamics. Energy of an isolated system, PMM-I, concept of internal energy and enthalpy. Heat transfer for various process for closed system. Meyer's Equation, important thermodynamic relations and cycle concepts, polytrophic and adiabatic process.

3. Second Law of Thermodynamics and Entropy

Kelvin-Planck and Clausius statement, Equivalence of Kelvin-Planck and Clausius statement.

Carnot Cycle, Carnot theorem, corollary of Carnot theorem and efficiency and COP of reversible cycle, Clausius inequality, numerical problem based on 2nd law of thermodynamics.

4. Thermodynamic Air Cycles and Application

Basic consideration in the analysis of power cycle, air standard assumptions, an overview of reciprocating engine, Otto Cycle, Diesel Cycle, Dual Combustion Cycle, Brayton Cycle, Stirling & Ericsson Cycle, Numerical Problems.

5. Properties of pure substance and Mixture of Gas and Vapor

Formation and Properties of Steam and Entropy of Steam, Properties of T-H diagram, T-V diagram, P-V diagram, T-S and H-S diagram for water and steam, Mollier Diagram, terminologies for steam, Advantages of Superheated steam, Entropy of water, dry steam, superheated steam.

Internal Combustion Engine Basics Concept on Heat Engine and classifications, IC engine basic components, Working Principle of a two stroke/ four stroke Engine, Advantages & Disadvantages.

7. **Refrigeration, Air Conditioning System and Psychrometry** Basic concepts on Refrigeration and Air Conditioning, Type of Refrigeration Process, Schematic and T-S Diagram Refrigeration cycle, Air Conditioning Types, Study of psychrometric chart.

8. Steam Boiler and Steam Turbine

Classification of boilers by mentioning the bases, Different types of boilers with their schematic and salient features, four accessories of Boiler: function and uses, Use of air-preheater, super-heater, fusible plug and safety valve for a boiler. Steam turbine cycle, Schematic and T-S diagram, Turbine Staging; Pressure and velocity profile of turbine, Combined Cycle Power Plant (CCPP).

COURSE SCHEDULE

Week	Contents	Assessment
Week 1	Introduction and Basic Concepts of Thermodynamics and Thermal	
	Engineering	
Class 1	Basic concepts of thermodynamics: introduction, applications, system, surrounding universe	
Class 2	Basic concepts of thermodynamics: zeroth law, properties of a system, state, process, cycle, pure substance, control volume	
Class 3	Work interaction and closed system work (Work is related to a system and surrounding closed system work = $\int P dv$)	CT 1
Week 2	Introduction and Basic Concepts of Thermodynamics and Thermal	
	Engineering (Contd.)	

Class 4	a) Ideal gas equation for various process	
	b) Closed system work for various process	
Class 5	a) Key note (observation of thermodynamic process)	
	b) open system work	
Class 6	Numerical problems based on	
	a) Thermodynamic work done concepts	
	b) Thermodynamic work done and cycle concept	
	c) Tutorial	
Week 3	Introduction and Basic Concepts of Thermodynamics and Therma	I
	Engineering (Contd.)	
Class 7	Numerical problems based on	
	a) Thermodynamic work done concepts	
	b) Thermodynamic work done and cycle concept	
	c) Tutorial	
Class 8	Numerical problems based on	
	a) Thermodynamic work done concepts	
	b) Thermodynamic work done and cycle concept	
	c) Tutorial	
	First Law and its application (Non-Flow Process)	
Class 9	a) Concept of heat and specific heat	
	b) First law of thermodynamics, first law for a cycle and sign	
	convention	
	c) Heat is a path function and energy or internal energy is a property.	
Week 4	First Law and its application (Non-Flow Process) (Contd.)	
Class 10	a) Energy of an isolated system, PMM-I	
	b) Concept of internal energy and enthalpy.	
	c) Heat transfer for various process for closed system.	
Class 11	a) Meyer's Equation,	CT 2,
	b) Important thermodynamic relations and air standard values	Assignment
	c) Specific heat for polytrophic process	Final Exam
Class 12	a) Adiabatic process	
	b) Numerical based of 1 st law of thermodynamics	
Week 5	Second Law of Thermodynamics and Entropy	
Class 13	a) Kelvin-Planck and Clausius statement	
	b) Equivalence of Kelvin-Planck and Clausius statement.	
	c) Carnot Cycle	
Class 14	a) Carnot theorem	
	b) Corollary of Carnot theorem and efficiency and COP of reversible	
	cycle,	
	c) Clausius inequality	
Class 15	Numerical based on 2 nd law of thermodynamics	
Week 6	Thermodynamic Air Cycles and Application	
Class 16	a) Basic consideration in the analysis of power cycle	
	b) Air standard assumptions	
	c) An overview of reciprocating engine	
	Application – I:	

	Otto Cycles: The ideal cycle for spark ignition engine	Mid Term,
Class 17	Application – II:	Final Exam,
	Diesel Cycles: The ideal cycle for compression ignition engine	
Class 18	Application – III:	
	Dual Combustion Cycle, Stirling & Ericsson Cycle	
Week 7	Thermodynamic Air Cycles and Application (Contd.)	
Class 19	Numerical on Otto Cycle	
Class 20	Numerical on Diesel Cycle	
Class 21	Numerical on Dual Combustion Cycle	
Week 8	Thermodynamic Air Cycles and Application (Contd.)	
Class 22	Brayton Cycles: The ideal cycle for gas turbine engine	
Class 23	Numerical on Brayton Cycle	
Class 24	Numerical on Brayton Cycle	
Week 9	Properties of pure substance and Mixture of Gas and Vapor	
Class 25	Formation and Properties of Steam and Entropy of Steam, Properties of T-H	
	diagram, T-V diagram, P-V diagram, T-S and H-S diagram for water and	
	steam	
Class 26	Mollier Diagram, terminologies for steam, Advantages of Superheated	
	steam, Entropy of water, dry steam, superheated steam	Mid Term,
Class 27	Numerical Problems on steam properties	Final Exam
Week 10	Internal Combustion Engine Basics	
Class 28	Concept on Heat Engine and classifications, IC engine basic components	
Class 29	IC engine basic components	
Class 30	Working principle of a two stroke/ four stroke Engine	
Week 11	Refrigeration, Air Conditioning System and psychrometry	
Class 31	Basic concepts on refrigeration and air conditioning, type of refrigeration Process	
Class 32	Schematic and T-S diagram refrigeration cycle, COP	
Class 33	Numerical problems on refrigeration system	
Week 12	Refrigeration, Air Conditioning System and psychrometry (Contd.) and	
	Steam Turbine	CT 3, Mid
Class 34	Air Conditioning types, study of psychrometric chart	Term
Class 35	Steam turbine cycle, Schematic and T-S diagram	Final Exam
Class 36	Turbine Staging; Pressure and velocity profile of turbine, Combined Cycle	
	Power Plant (CCPP)	
Week 13	Steam Turbine and Steam Boiler (Contd.)	
Class 37	Numerical on steam turbine	
Class 38	Classification of boilers by mentioning the bases, Different types of boilers	
	with their schematic and salient features,	
Class 39	Four accessories of Boiler: function and uses, Use of air-preheater, super-	
	heater, fusible plug and safety valve for a boiler.	
Week 14

PRE-REQUISITE None

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

The course aims to equip students with basic tools and methodologies for carrying out thermodynamic analyses of engineering systems. With the completion of each experiment, student will gradually develop the ability to compare and apply the theories of thermodynamic principles in the real-life applications of thermal engineering notably in properties of fuels, heat engine, refrigeration and conditioning system, steam generation etc.

OBJECTIVES

- 1. To expose the students to the basic knowledge of thermal equipment and help them to develop experimental skills.
- 2. To familiarize equipment used for measuring viscosity, flash and fire point and Calorific value of fuels/lubricates used in IC Engines.
- 3. To familiarize with various types IC engines and their components.
- 4. To introduce with the models of refrigeration, air conditioning, dead weight tester and speed measuring devices to know about their operating principles.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. **Conduct** experiments for the determination of viscosity, calorific value, flash point etc. of fuel/Lubricates oil.
- 2. Identify various components of IC engine.
- 3. **Perform** component analysis of refrigeration and air conditioning system.
- 4. **Use** modern experimental tools to conduct the experiments related to thermodynamic system, speed measurement, calibration of pressure gauge.

COURSE CONTENTS

- 1. Viscosity Test of a Lubricant Oil
- 2. Determination of Flash Point of Liquid Fuel
- 3. Calorific value of Gaseous Fuel by Gas Calorimeter
- 4. Proximate Analysis of Coal
- 5. Determination of Carbon Residue of a Given Fuel
- 6. Study of Various Components of an I.C Engine
- 7. Study of a Refrigeration and Air Conditioning Unit
- 8. Study of Sling Psychrometer
- 9. Study of a Gas Turbine.
- 10. Study the working and function of mountings and accessories in boilers.
- 11. Study of a steam turbine.

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

This course is intended to provide students with a thorough understanding of the theory and application of structural analysis as it applies to columns, beams and frames. Emphasis is placed on developing the student's ability to calculate the deflection of beam, shear force and bending moment.

OBJECTIVES

- 1. To evaluate stress and deformation of simple deformable structural under shear, flexure and torsional loadings.
- 2. To analyze statically indeterminate structure.
- 3. To analyze deflection of beam and shaft.
- 4. To analyze buckling of column.
- 5. To establish the stress transformation equations and determine the absolute maximum normal and shear stress.
- 6. To analyze various situations involving structural members subjected to combined stresses by application of Mohr's circle of stress.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. Explain the concepts and principles of structural stability and mechanical components.
- 2. **Perform** calculation and drawing of shear force and bending moment at different loading conditions.
- 3. Analyze various situations involving structural members subjected to combined stresses.
- 4. **Evaluate** the deflection of beam and buckling of column subjected to different loading conditions.

COURSE CONTENTS

- 1. **Introduction to Mechanics of Structure:** Basic Concept of Mechanics, Importance of Mechanics of Structure in Ship Design, Centroids and Moments of Inertia of different structural elements.
- 2. **Tension, Compression, and Shear**: Normal Stress and Strain, Mechanical Properties of Materials, Elasticity, Plasticity, and Creep, Linear Elasticity, Hooke's Law, and Poisson's Ratio, Shear Stress and Strain.
- 3. **Axially Loaded Members:** Changes in Lengths of Axially Loaded Members, Changes in Lengths under non uniform conditions, Statically Indeterminate Structures, Thermal Effects.
- 4. **Torsion:** Torsional Deformations of a Circular Bar, Circular Bars of Linearly Elastic Materials, Non-uniform Torsion, Stresses and Strains in Pure Shear, Relationship Between Moduli of

Elasticity E and G, Transmission of Power by Circular Shafts, Statically Indeterminate Torsional Members, Strain Energy in Torsion and Pure Shear, Thin-Walled Tubes, Stress Concentrations in Torsion.

- 5. **Shear Forces and Bending Moments:** Types of Beams, Loads, and Reactions, Shear Forces and Bending Moments, Relationships Between Loads, Shear Forces, and Bending Moments, Shear-Force and Bending-Moment Diagrams.
- 6. **Stresses in Beams:** Pure Bending and Non-Uniform Bending, Curvature of a Beam, Longitudinal Strains in Beams, Normal Stresses in Beams, Shear Stresses in Beams of Rectangular and Circular Cross Section, Shear Stresses in the Webs of Beams with Flanges, Beams with Axial Loads, Stress Concentrations in Bending.
- 7. **Analysis of Stress and Strain:** Plane Stress, Principal Stresses and Maximum Shear Stresses, Mohr's Circle for Plane Stress, Hooke's Law for Plane Stress, Triaxial Stress, Plane Strain.
- 8. **Deflections of Beams:** Differential Equations of the Deflection Curve, Deflections by Integration of the Bending-Moment Equation, Deflections by Integration of the Shear-Force and Load Equations, Method of Superposition, Moment-Area Method, Non-prismatic Beams, Strain Energy of Bending, Deflections Produced by Impact.
- 9. **Statically Indeterminate Beams:** Types of Statically Indeterminate Beams, Analysis by the Differential Equations of the Deflection Curve, Method of Superposition, Temperature Effects, Longitudinal Displacements at the Ends of a Beam.
- 10. **Columns:** Buckling and Stability, Columns with Pinned Ends, Columns with Other Support Conditions, Columns with Eccentric Axial Load, The Secant Formula for Columns, Elastic and Inelastic Column Behavior, Inelastic Buckling, Design Formulas for Columns.

COURSE SCHEDULE

Week 1	Introduction to Mechanics of Structure						
Class 1	Basic Concept of Mechanics, Importance of Mechanics of Structure in						
	Ship Design						
Class 2	Centroids of Plane Areas, Moments of Inertia of Plane Areas, Parallel- Axis Theorem for Moments of Inertia.						
Class 3	Polar Moments of Inertia, Rotation of Axes, Principal Axes and Principal Moments of Inertia.						
Week 2	Tension, Compression, and Shear						
Class 4	Normal Stress and Strain, Mechanical Properties of Materials,	Final					
	Elasticity, Plasticity, and Creep, Linear Elasticity.	Exam					
Class 5	Hooke's Law, and Poisson's Ratio, Shear Stress and Strain, Allowable						
	Stresses and Allowable Loads, Design for Axial Loads and Direct						
	Shear.						
Class 6	Changes in Lengths of Axially Loaded Members, Changes in Lengths						
	Under Non uniform Conditions.						
Week 3	Axially Loaded Members						
Class 7	Statically Indeterminate Structures, Thermal Effects, Misfits, and Pre-						
	strains.						

Class 8	Stresses on Inclined Sections, Strain Energy, Impact Loading, Repeated	
	Loading and Fatigue, Stress Concentrations, Nonlinear Behavior	
Class 9	Types of bars of varying sections, Stresses in the bars of different	
	sections.	
Week 4	Torsion	
Class 10	Torsional Deformations of a Circular Bar, Circular Bars of Linearly	
	Elastic Materials, Non-uniform Torsion.	
Class 11	Assessment 01	
Class 12	Stresses and Strains in Pure Shear, Relationship Between Moduli of	
	Elasticity <i>E</i> and <i>G</i> , Transmission of Power by Circular Shafts.	
Week 5	Shear Forces and Bending Moments	
Class 13	Statically Indeterminate Torsional Members, Strain Energy in Torsion	
	and Pure Shear, Thin-Walled Tubes, Stress Concentrations in Torsion.	CT-2
Class 14	Types of Beams, Loads, and Reactions, Shear Forces and Bending	Final
	Moments.	Exam
Class 15	Relationships Between Loads, Shear Forces, and Bending Moments,	
	Shear-Force and Bending-Moment Diagrams	
Week 6	Stresses in Beams	
Class 16	Shear-Force and Bending-Moment Diagrams. (Continue)	
Class 17	Pure Bending and Non-uniform Bending, Curvature of a Beam,	
	Longitudinal Strains in Beams.	
Class 18	Normal Stresses in Beams, Design of Beams for Bending Stresses,	
	Non-prismatic Beams, Shear Stresses in Beams of Rectangular Cross	
Week 7	Section. Stresses in Beams	
Class 19	Shear Stresses in Beams of Circular Cross Section, Shear Stresses in	
	the Webs of Beams with Flanges.	
Class 20	Built-Up Beams and Shear Flow, Beams with Axial Loads, Stress	
	Concentrations in Bending.	
Class 21	Assessment 02	
Week 8	Analysis of Stress and Strain	
Class 22	Plane Stress, Principal Stresses and Maximum Shear Stresses	
Class 23	Plane Stress, Principal Stresses and Maximum Shear Stresses	Mid
Class 24	Application and Problems	Term,
Week 9	Mohr's Circle	Final
Class 25	Mohr's Circle for Plane Stress	Exam
Class 26	Mohr's Circle for Plane Stress	
Class 27	Application and Problems	
Week 10	Deflections of Beams	
Class 28	Differential Equations of the Deflection Curve, Deflections by	
	Integration of the Bending-Moment Equation.	
Class 29	Deflections by Integration of the Shear-Force and Load Equations,	
	Method of Superposition.	
Class 30	Moment-Area Method, Non-prismatic Beams, Strain Energy of	
	Bending, Castigliano's Theorem.	
Week 11	Statically Indeterminate Beams	CT 3,

Class 31	Types of Statically Indeterminate Beams, Analysis by the Differential Equations of the Deflection Curve						
Class 32	Method of Superposition, Temperature Effects, Longitudinal Displacements at the Ends of a Beam.						
Class 33	Application and Problems.						
Week 12	Columns						
Class 34	Mid-Term Exam						
Class 35	Buckling and Stability, Columns with Pinned Ends.						
Class 36	Columns with Other Support Conditions, Columns with Eccentric Axial Load.						
Week 13	Columns						
Class 37	The Secant Formula for Columns, Elastic and Inelastic Column Behavior.						
Class 38	Inelastic Buckling, Design Formulas for Columns.						
Class 39	Application and Problems.						
Week 14	Course review						
Class 40	Course review						
Class 41	Course review						
Class 42	Course review

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

Mechanics of Structure Sessional course is designed to teach students about the basic concepts of strength of materials such as analysis of material properties based on tension, compression, hardness, bending, buckling, impact, etc. Students will be able to perform necessary calculations related to tensile stress, compressive stress, and shear stress. It is expected that students will develop critical thinking about measuring characteristics of strength of material precisely, be able to check their effects using calculations, and finally chose the appropriate feature of structure.

OBJECTIVES

- 1. To impart knowledge about fundamental concepts as stresses and strains, deformations and displacements, elasticity and inelasticity, strain energy, and load-carrying capacity
- 2. To enable students to learn and appreciate how structural analysis and materials response are intricately involved in the engineering product/device design process.
- 3. To familiarize the students with the effect of different types of stress on materials.
- 4. To teach students about the fundamental concepts of materials failures.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. Apply knowledge of engineering fundamentals to the solution of structure-related problems in practical design-based project work.
- 2. Conduct examinations on structures using research-based knowledge including analysis, interpretation of data, and provide valid conclusions.
- 3. Apply appropriate techniques, resources, and modern engineering tools, including prediction of structural problems, with an understanding of the limitations.
- 4. Interconnect effectively on structural activities to write effective reports, and give and receive clear instructions.

COURSE CONTENTS

- 1. Study and Calibration of a Universal Testing Machine (UTM);
- 2. Tensile Test of Mild Steel Specimen;
- 3. Hardness Test of Metal Specimen;
- 4. Impact Test of Metal Specimen;
- 5. Column Test of Mild Steel Specimen;
- 6. Bending of a beam under point load.

PRE-REQUISITE

None

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

The knowledge of Shipbuilding Materials and Metallurgy course is intended to provide an integrated approach, utilizing the materials science, and structural integrity principles as they apply to offshore structures and ships. Students will be able to select appropriate materials for ships and marine structure and components. It is expected that students will develop critical thinking to select optimum material for marine structure on the basis of engineering and environment point of view.

OBJECTIVES

- 1. To enable explain methods of production of cast iron, steel and nonferrous metals.
- 2. To enable explain the concepts on material property improvement and heat treatment technology.
- 3. To familiarize with different marine engineering materials and essential criteria on different applications.
- 4. To introduce the appropriate material depending on application and environment of marine structure and ship.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. **Selection** of appropriate materials for specific applications in marine engineering considering various factors like environment, strength, properties etc.
- 2. **Develop** the ability to translate design criteria into material selection decisions.
- 3. **Apply** different processing and heat treatment techniques to tailor material properties for specific needs.
- 4. **Understanding** the current trends and emerging materials relevant to shipbuilding industry.

COURSE CONTENTS

1. **Metals as materials of construction:** What is material Science and Engineering, Classification of materials; Materials Design and Selection. Industrially significant properties of metallic materials: Technological Significance; Terminology for Mechanical Properties; Tensile test: Use of the stress-strain diagram, True Stress and True Strain; The Bend test for Brittle materials; Hardness of Materials; Strain Rate Effects and Impact Behavior; Fracture Mechanics; Micro-structural features of fracture in metallic materials, ceramics, glasses and composites; Fatigue; Results and applications of fatigue test; Creep, Stress Rupture and Stress Corrosion.

- 2. **Production, properties and uses of Pig Iron, Cast Iron and Carbon Steels:** Blast Furnace production of Pig Iron; Bessemer process for the production of steel; The Open-Hearth Process. Phase diagrams, The Fe-Fe3C equilibrium diagram: Equilibrium diagrams, Phase diagrams for two metals completely soluble in liquid and solid states, Two metals completely soluble in the liquid state and completely insoluble in the solid state; Two metals completely soluble in the liquid state but only partly soluble in the solid state; The Eutectoid Reaction; The Iron-Iron Carbide Diagram.
- 3. **Heat treatment of Steel:** Full Annealing; Spheroidizing; Stress-relief Annealing; Process Annealing; Normalizing; Hardening, Astatizing Temperature, Mechanism of heat removal during Quenching, Quenching medium; Tempering.
- 4. **Cast Iron, Alloy, tool, stainless, heat-resisting and creep resisting steels etc.:** White Cast Iron, Malleable Cast Iron, Pearlitic Malleable Iron, Gray Cast Iron, Mechanical properties and applications of Gray Cast Iron, Silicon in Cast Iron, Alloy Cast Iron; Stainless steel types.
- 5. **Case hardening of steels:** Carburizing; Nitriding; Cyaniding; Flame hardening; Induction hardening.
- 6. **Nonferrous alloys:** Copper alloys, Brass alloys, Bronze alloys, Gun metal, Bearing Materials, Aluminum alloys, Magnesium alloys, Tin alloys.

Protective Coatings. Cement, Timber, Rubber, Glass and Plastic

General steel grades and description of IACS requirement for shipbuilding materials.

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

Performance or application of material depends on synthesis, composition and properties of material. Like the other engineering field, structural performance of a ship is governed by proper selection of material. This is a compulsory sessional course based on experiment, inspection and composition analysis of materials for a better understanding of structure-material properties correlation. Shipbuilding Materials Sessional is designed to introduce the students with metallography and the influence of metallographic structure on material properties.

OBJECTIVES

- 1. To introduce students with metallography and the influence of metallographic structure on material properties.
- 2. To teach the students specimen sample preparation.
- 3. To help students understand phase diagrams in details.
- 4. To demonstrate the effect of heat treatment on microstructure and material properties.
- 5. To enable the students to study the microstructure of steel and cast iron.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. **Demonstrate** a comprehensive understanding of metallographic principles and procedures for sample preparation.
- 2. Analyze phase diagrams and apply them to interpret microstructures of various steels.
- 3. **Understanding** the modification of properties of steel due to application of heat treatment process.
- 4. **Describe** and **identify** the microstructural features of cast irons, relating them to the material's composition.

COURSE CONTENTS

- 1. Introduction to Metallographic and Metallographic Sample Specimen Preparation.
- 2. Study of Phase Diagrams, Microstudy of steels.
- 3. Heat treatment of steels.
- 4. Microstudy of cast irons.

PRE-REQUISITE

Course Code: NAME 107, NAME 157 **Course Title:** Introduction to Naval Architecture and Marine Engineering, Hydrostatics and Stability

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

The course aims to provide the understanding of the many facets of ship design – function and appearance and design philosophy. A ship structure must be stable, seaworthy and have adequate strength in all weathers. This course will help to develop and apply key theories and principles associated with the design of vessels and also develops fundamental naval architecture knowledge, including a thorough exploration of its concepts and how they are practically used in applications in ships.

OBJECTIVES

- 1. To enable in interpreting and applying the design principles of naval architecture
- 2. To enable in imparting knowledge on applying appropriate calculations and interpret outcomes in naval architecture tasks.
- 3. To introduce to the role that the naval architects play in meeting and industry and international regulatory requirements
- 4. To enable in preparing a complete design spiral of ship.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. **Apply** knowledge in practical ship designs and construction;
- 2. Evaluate different design parameters, characteristics and performances of ships;
- 3. Analyze design philosophy and design aspects of different type of ships;
- 4. **Compare** the characteristics of different design stages;

COURSE CONTENTS

- 1. **Introduction to Ship Design:** Engineering design-philosophy: Various design stages: concept design, basic designs, preliminary designs, contract designs, detailed designs.
- 2. **Ship Design Spiral:** cargo routes, estimation of dimensions and hull form and displacement, preliminary G.A plan, calculation of freeboard, depth, volume, tonnage and capacities, calculation of longitudinal strength, resistance and powering, selection of machinery and outfit, checking for trim and stability, estimation of lightweight and cargo deadweight, economic criteria and evaluation.
- 3. Extensive Use of Design Computer Environment: Given owner's requirements, students individually create and report the conceptual/preliminary design for a displacement ship and Case studies of typical marine vehicles.

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

The course "Computer Aided Ship Design - I" is designed to provide students with foundational knowledge and practical skills in ship design using Computer Aided Design (CAD) software. Understanding ship design principles and drawing techniques is crucial for aspiring naval architects and marine engineers. This course aims to equip students with the necessary tools to develop detailed ship designs, including General Arrangement (GA) plans, Lines plans, and Midship Section Drawings, while also introducing them to preliminary structural design calculations.

OBJECTIVES

- 1. To introduce students to Computer-Aided Design (CAD) software and its applications in ship design.
- 2. To develop students' proficiency in creating 2D and 3D drawings using CAD tools.
- 3. To enable students to interpret and draw General Arrangement (GA) plans and Lines plans for ships.
- 4. To provide students with hands-on experience in preliminary structural design calculations for ships.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. Utilize CAD software effectively to develop 2D and 3D ship drawings, incorporating appropriate drawing units, scales, and dimensions.
- 2. **Apply** CAD software proficiently to **produce** ship design and drawings adhering to industrial standards.
- 3. **Perform** preliminary structural design calculations for ships using relevant rule books and **produce** drawings demonstrating understanding of ship structural components.
- 4. **Demonstrate** effective presentation and report writing skills through drawings and calculations.

COURSE CONTENTS

- 1. AutoCAD: Introduction to CAD, drawing unit and scale, 2-D drawing tools, Modification tools, layers, hatching and dimensioning, working in 3-D space, 3-D coordinate systems, drawing sheet layout, viewpoints, 3-D drawing tools, 3-D wire frame modelling, Surface modelling, solid modelling and rendering.
- 2. General arrangement (GA) plan drawing in CAD software,
- 3. Lines plan drawing in CAD software,

- 4. Preliminary structural design calculation of ships using Rule Book,
- 5. Midship Section Drawing

Outcome Based Education (OBE)

RATIONALE

This is a compulsory theoretical course to promote the knowledge of the students about basic laws, principles and phenomena in the area of fluid flow related engineering problems. The course has also been designed to familiarize the students in the working principles of the design of Hydraulic Machineries used onboard ships.

OBJECTIVES

- 1. To enable achieving ability to apply the basic applied mathematical tools that support fluid dynamics.
- 2. To impart knowledge to identify & explain the physical properties of a fluid, its influence on fluid flow & fundamental kinematics of a fluid element.
- 3. To make proficient to explain & formulate the conservation principle of mass, linear momentum and energy for fluid flow. & interpret the working principles of different hydraulic machineries used on board ship.
- 4. To enable to design &create models of the prototype to investigate different parameter during fluid flow over the profiles and shapes.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. **Demonstrate** the understanding in applying the basic applied mathematical tools that support fluid dynamics.
- 2. **Explain** the knowledge to identify the physical properties of a fluid, its influence on fluid flow & fundamental kinematics of a fluid element
- 3. **Construct** the formulations of the conservation principle of mass, linear momentum and energy for fluid flow and interpret the working principles of different hydraulic machineries used on board ship
- 4. **Develop** models of prototype to investigate different parameter during fluid flow over the profiles and shapes.

COURSE CONTENTS

- 1. **Fluid properties:** Classification of Fluid Flows, Density and Specific Gravity, Energy and specific heats, Compressibility and Bulk Modulus, Viscosity, Surface Tension and Capillary Effect.
- 2. Fluid statics and kinematics: Pressure head, Pascal's law, Instruments to measure fluid pressure, Total pressure on horizontally, vertically and inclined immersed surfaces, Pressure on a curved surface, Centre of pressure on an inclined immersed surface, Lagrangian and Eulerian descriptions of fluid kinematics, Streamlines and Streamtubes, Pathlines, Streaklines,

Timelines, Refractive and surface flow visualization techniques, Plots of fluid flow data, Types of motion or deformation of fluid elements, The Reynolds Transport Theorem, Bernoulli's equation, Euler's equation of motion, Limitations of Bernoulli's equations, Practical Applications of Bernoulli's equation, Venturimeter, Discharge through a Venturimeter, Orifice Meter, Pitot Tube, Discharge over a Rectangular Notch, Discharge over a Triangular Notch.

- 3. **Continuity, energy and momentum principle:** Conservation of Mass, Mass and Volume flow rates, Moving or deforming control volumes, Incompressible flow, General Equation of Energy, Newton's Laws and Conservation of Momentum, The linear Momentum equation.
- 4. Friction and flow through pipes, impact of jets: Loss of head in pipes, Darcy's and Chezy's Formula for loss of head in pipes, Graphical representation of Pressure head and velocity head, Hydraulic Gradient line, Total Energy Line, Transmission of power through pipes, Time of emptying a tank through a long pipe, Force of Jet Impinging Normally on fixed, hinged, inclined and moving plate, Force of jet impinging on a fixed and moving curved vane.
- 5. Laminar and turbulent flows: Introduction to boundary layers, drags, and wakes, Drag and Lift, Friction and Pressure Drag, Drag coefficients of common geometries, Parallel flow over flat plates, Flow over cylinders and Spheres, Lift.
- 6. **Dimensional analysis, principles of similitude and model testing:** Fundamental Dimensions, Dimensional Homogeneity, Uses of the principle of Dimensional Homogeneity, Methods of Dimensional Analysis, Rayleigh's Method, Buckingham's Pi-theorem, Selection of Repeating Variables, Advantages of Model Analysis, Hydraulic Similarity, Procedures for model analysis, Comparative studies between prototype and undistorted model.
- 7. Aero foil and its application: Theory of wings, Cavitation.
- 8. Hydraulic machines: Reciprocating and Centrifugal pumps, pump efficiency.

RATIONALE

This sessional course introduces the principles of fluid mechanics of mechanical systems. Students will be exposed to the experimental methods in the fluid flow systems like flow measurement in closed/open conduits including friction loss, pump performance, center of pressure and buoyancy. By the end of this course, students should be able to understand the basic principles and analysis of both static and dynamic fluid systems

OBJECTIVES

- 1. To familiarize the students with different types of pumps and turbines.
- 2. To impart training to use Bernoulli's Theorem in various flow measuring devices for making engineering judgments.
- 3. To provide practice in estimating friction losses in fluid flow.
- 4. To develop understanding about hydrostatic law, principle of buoyancy and stability of a floating body and application of mass, momentum and energy equation in fluid flow.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. **Apply** fundamental principles of fluid mechanics to **analyze** and **evaluate** the performance of pumps and turbines.
- 2. Verify the Bernoulli's Theorem and apply it in flow measuring devices.
- 3. Analyze the head loss due to friction occurring in fluid flow.
- 4. Apply the knowledge of hydrostatic loading to calculate centre of pressure and buoyancy

COURSE CONTENT

- 1. Performance Test of a reciprocating pump
- 2. Performance test of Centrifugal Pump Connected in Series and Parallel Connections
- 3. Study of Propeller Turbine Characteristics
- 4. Verification of Bernoulli's Equation
- 5. a) Study of Flow through Orifice
- b) Study of Flow through Venturi Meter
- 6. a) Calibration of Rectangular Notch
- 7. b) Calibration of Triangular Notch (V)
- 8. Determination of the location of the center of pressure for a submerged plane surface
- 9. Determination of Centre of gravity, Metacenter and Buoyancy of a floating vessel.
- 10. Determination of Head Loss Due to Pipe Friction.

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

This course is intended to give students the skills to analyze the flow of fluid around shapes commonly in the design of marine vehicles, such as the vessel's hull, hydrofoils, propeller blades, etc. It is a compulsory theoretical course designed on the basis to understand the characteristics of fluid flow and its implication in the design of Marine Vehicles.

OBJECTIVES

- 1. To give brief idea about the flow around bluff and streamlined bodies and discuss the benefits of streamline,
- 2. To enable achieving ability to calculate the pressure distribution and wake field around a submerged body like ship.
- 3. To impart knowledge assessing the forces applied by the flow to submerged bodies in fluid by applying the knowledge of fluid flow principles, including conservation of mass, momentum and energy, Bernoulli's principle, the stream and potential functions, and sources and sinks.
- 4. To enable estimating the wave-induced loads on geometric shapes of floating structures and be able to apply the knowledge in Ship design.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. **Describe** the hydrodynamic flow pattern around ship & calculate flow velocity at different point on the flow.
- 2. **Compute** the pressure distribution and wake field around a submerged body like ship.
- 3. **Assess** the forces applied by the flow to submerged bodies in fluid by applying the principles of fluid dynamics.
- 4. **Estimate** the wave-induced loads on geometric shapes of floating structures and be able to apply the knowledge in Ship design.

COURSE CONTENTS

- 1. <u>Flow of an ideal fluid:</u> Equation of continuity, streamlines, streak lines and path lines, twodimensional flow patterns, rotational and irrotational flows, vorticity, velocity potential functions, stream functions, Euler's equation of motion, Bernoulli's equation, velocity and pressure distribution.
- 2. <u>Standard Patterns of Flow:</u> Uniform flow, irrotational vortex, circulation, source, sink and doublet, flow past a half body, cylinder and rankine body, virtual mass and Magnus effect.

- 3. <u>Conformal transformation:</u> Analytic functions, singularities, Cauchy-Riemann equations, complex potential, application of conformal transformation to some flow cases, joukowski's hypothesis, lift of an infinite aerofoil. Theorems of Green, Stokes, Cauchy and Blasius and their application to some hydrodynamic problems.
- 4. <u>Flow of a real fluid:</u> Navier-Stokes equations, displacement, momentum and energy, thickness of the boundary layer, Plane progressive waves, Wave energy, Two- and three-dimensional ship waves, the method of stationary phase, Energy radiation and wave resistance, Body response in regular waves, Wave exciting force and moment and characteristics of flow around a ship hull.

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

Marine Hydrodynamics Sessional course is designed to teach students about the hydrodynamic application in ship and machinery design retrospect, namely types of floating structures, marine machinery parts etc. Students will be able to perform necessary calculations related to the basic design, assess performance calculations once the course is completed.

OBJECTIVES

- 1. To enable students to be familiarized with different flow patterns in application.
- 2. To familiarize the students with applied and calculative concept of hydrodynamics
- 3. To enable students to compute different parameters of ships, floating bodies using hydrodynamics concept.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. Apply knowledge of engineering fundamentals to explain the different hydrodynamic features of various types of fluid flows.
- 2. Identify different kinds of fluid flow patterns and reach substantiated conclusions using the first principles of mathematics and engineering sciences.
- 3. Create appropriate techniques, resources, and modern engineering tools to demonstrate and manipulate the flow past different shapes and structures for observing laminar and turbulent flows.
- 4. Recognize the need for, and apply experimental data obtained from laboratory investigations and numerical simulations to analyze hydrodynamic phenomena and engage in life-long learning in the broadest context of technological change.

- 1. Determination of the exact section of the pitot tube
- 2. Determination of the flow speed profiles in a pitot tube
- 3. Determination of measure error using the pitot tube
- 4. Determination of ship stability
- 5. Demonstration of Cavitation Phenomenon
- 6. Determination of Impact against a flat, curve and semispherical surface
- 7. Study of forced vortex without discharge orifice

- 8. Observation of laminar, transition and turbulent flow and Classification of the different types of flow depending on Reynolds number
- 9. Ideal flow around a submersed profile
- 10. Demonstration the phenomenon associated to the flow in an open channel

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

This course is the second stage of Ship Design and Drawing which is a compulsory sessional course for future naval architects. This course focuses on advanced topics such as shell expansion drawing, longitudinal construction drawing, capacity plan calculations. Students will also learn design and drawings of the principal propulsion and steering machinery of a ship which includes rudder, steering, shafting, propeller and main engine foundation. By understanding the complex propulsion system of a ship from this course, it is expected that students will be able to design a complete propulsion system along with proper drawings.

OBJECTIVES

- 1. To enable students to create detailed shell expansion and longitudinal construction drawings for ships.
- 2. To develop students' proficiency in capacity plan calculations, essential for ship stability and load management.
- 3. To familiarize students with the design principles and calculations involved in marine rudders and ship steering gear systems.
- 4. To equip students with the knowledge and skills to design shafting arrangements and propeller shafts for marine propulsion systems.
- 5. To enable selection of proper scantlings by exact calculations to design the engine room foundation.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. **Prepare** and **develop** ship design drawings adhering to industrial standards.
- 2. **Demonstrat**e methodological knowledge and understanding in various marine machineries with considerations for safety requirements.
- 3. **Prepare** layout of various marine machineries using Computer Aided Design (CAD) software.
- 4. **Demonstrate** effective communication skills by presenting various components of ship design and drawings.

- 1. Shell Expansion Drawing
- 2. Longitudinal Construction Drawing

- 3. Capacity Plan calculations
- 4. Design of a marine rudder
- 5. Design of ship steering gear system
- 6. Design of shafting arrangement system and propeller shaft
- 7. Calculation and drawing of ship engine foundation

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

Compulsory Sessional course which is intended to assist the reality of accepting a design brief from a client/owner, researching the requirements, coming up with the design of a vessel which will meet those requirements, and preparing the documentation (drawings, calculations and specification of outfit items) to describe the vessel so that it may be built. These courses also provide a solid grounding in the overall ship design process.

OBJECTIVES

- 1. To enable students to design a general arrangement plan and lines plan as required of the design brief.
- 2. To enable students to compute hydrostatic properties of ship and able to draw hydrostatic curves.
- 3. To enable students to calculate scantlings and make midship section and longitudinal drawings.
- 4. To enable students to make decision of selecting engine and propeller.
- 5. To enable students to make decision of designing a complete vessel.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. **Produce** a suitable hull form by using Maxsurf and translate to a lines plan and a general arrangement drawing in AutoCAD;
- 2. **Evaluate** the stability of the vessel and selecting engine and propeller;
- 3. **Perform** scantlings calculation and mid ship section drawing of a vessel;
- 4. **Describe** new thinking and innovation of ship design;
- 5. Acknowledge the concept and idea of existing design through proper recognition;
- 6. **Communicate** through clear report writing adapt to standard format and performs verbal presentation;
- 7. **Perform** and produce whole design work as an individual or member/leader of a team.

- a. Design of a particular ship: principal particulars,
- b. General Arrangement (GA),
- c. Lines plan with offset table, Lightship,
- d. Preliminary deadweight and displacement calculation,
- e. Freeboard Calculation,
- f. Scantling, Mid-ship section drawing,
- g. Longitudinal Drawing: Profile Deck & Bottom,
- h. Shell Expansion Drawings,

- i. Detailed LWT & DWT calculation,
- j. Resistance & Power Calculation, machinery, endurance, outfit,
- k. Approximate trim and cross curves, Stability for different loading conditions, Wind heel criteria for different loading conditions,
- 1. Engine selection, Engine Foundation,
- m. Rudder design & Steering Arrangement,
- n. Shafting & Propeller Design.

COUSRE SCHEDULE

Term-I

Lecture-1	Course administration, instructors, contents, mark distribution, ethics, tools etc.					
	Project inputs and allotment of projects to the students					
	Preliminary lightship, deadweight and displacement calculation and determination of preliminary principal particulars (L, B, D, T, etc.) (Using empirical formulae).					
Lecture-2	Issues with principal particulars					
	Preliminary GA plan; space allocation for cargo and consumables.					
	Floodable length calculation, watertight subdivision, Preliminary freeboard calculations.					
Arrangement of propulsion machinery, deck machinery etc., number calculation, accommodation arrangement.						
Lecture-3	Preliminary GA arrangement (sketch in paper) for review					
	Issues with General Arrangement					
Lecture-4	Submission of Preliminary GA arrangement.					
	3D surface model generation (in Rhino/ Maxsurf), preliminary displacement and draft check,					
	Compartmentation, cargo and consumables capacity check.					
Lecture-5	Issues with 3D model in Rhino and Maxsurf.					
Lecture-6	Preliminary hydrostatic report, lines and offset table generation from 3D model.					

	FIRST PRESENTATION						
Lecture-8	Determination of ship scantling using class rule book Midship section drawing						
Lecture-9							
	Midship section drawing						
Lecture-11	Guidance on shell expansion, profile and deck plan and other ship drawings						
Lecture-12	Review of shell expansion, profile and deck plan and other ship drawings.						
Lecture-13	Detail lightship calculation (using scantling drawings + GA in Excel) +						
	Guidance in stability load cases						
Lecture-14	Review and advise on the preliminary trim and stability calculation						
	SECOND PRESENTATION						

Term-II

Lecture-1	Resistance & power calculation, main engine selection							
Lecture-2	Lecture-2 Propeller design, gear box selection and shafting design.							
Lecture-3	Lecture-3 Rudder design & steering arrangement							
Lecture-4	Lecture-4 Propulsion arrangement (ME, GB, shafting, propeller and rudder) + ME							
	foundation.							
Lecture-5	Lecture-5 Final weight estimation (hull + mach) including weight margin.							
Lecture-6	Lecture-6 GA, lines and offset table, hydrostatic, trim & stability updates.							
	THIRD PRESENTATION							
Lecture-8	Propulsion arrangement (ME, GB, shafting, propeller and rudder)							
Lecture-9	Final weight estimation (hull + mach) including weight margin.							
Lecture-10	GA, lines and offset table updates							
Lecture-11	Lecture-11 Hydrostatic, trim & stability updates.							
Lecture-12	Lecture-12 Review and discussion on report writing							
Lecture-13	Lecture-13 Quiz & Viva							
	FINAL PRESENTATION AND REPORT SUBMISSION

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

This compulsory theoretical course is intended to provide students with a thorough understanding of the theory and application of structural analysis as it applies to the ship's scantlings and hull. Emphasis is placed on developing the student's ability to analyze the deflection, buckling, shear force and bending moment of ship structural elements.

OBJECTIVES

- 1. To enable to impart knowledge on static and dynamic effect on ship structure.
- 2. Achieving ability to understand the theory and application of ship structural analysis.
- 3. To enable to calculate the longitudinal and transverse strength of ship structure.
- 4. To enable to calculate the buckling and wide plate bending of ship structure.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. Explain structural elements of ships and crafts with functions.
- 2. **Perform** calculation of stress, strain, displacement, shear force, bending moment and light weight of ship.
- 3. Analyze the longitudinal and transverse strength of ship structure at different loading conditions.
- 4. **Evaluate** the deflection, bending and buckling of ship structure and elements.

- 1. **Introduction to Ship Structure:** Classification of ship structures, forces acting upon a ship at sea, smith effect, slamming, hogging, sagging, types of ship motion, occurrence of largest hogging/sagging bending moment in a ship at sea, buoyancy curve in still water and weight curve, shearing force and bending moment curves, buoyancy curves amongst waves compared with buoyancy in still water, functions of the ship structures, the strength/distortion of ship structures.
- 2. Longitudinal Strength of Ship Structure: Assumed form of wave system for structural design, difference between sinusoidal wave and trochoidal wave, formation and necessity of trochoid. distance between half height of a trochoidal wave and the equivalent still water level, buoyancy curves for different positions of wave, 'sagging condition' and 'hogging condition', plotting the buoyancy curve, light weight and dead weight, types of weights, plotting the weight curve.

Sir john. h. biles approximation method, plotting the load, shearing force and bending moment curves from buoyancy and weight curves in calculation of longitudinal strength of a ship, characteristics of shearing force and bending moment curves of a ship, sketch the typical curves of load, shearing force and bending moment for a ship, influence of position of wave on bending moment, Murray's approximate method for calculating the bending moment of a ship, alternative method for calculating the approximate buoyancy moment, alternative method for calculating the approximate buoyancy moment, alternative method for calculating the approximate buoyancy moment, alternative method for calculating the approximate buoyancy moment of a ship, calculation of maximum bending moment considering the position of maximum is at midship.

- 3. Stresses in the Structure and the Calculation of Deflection: Definition of neutral axis, flexural rigidity of beam, section modulus strain curvature and moment curvature relation for a curved beam, flexure formula, equation for the location of neutral axis in the inclined condition of a ship, inclination for greatest and least stresses of an inclined ship, stress variation with angle of inclination of a ship, formulation of the necessary steps for calculation of the deflection of ship structure, shear formula for a structure, influence of shear stress on bending theory stress, strain energy method for calculating shear deflection, derivation of equation of shear deflection and calculation of shear deflection, maximum normal stresses at a cross section, stress variation in a rectangular cross section for positive and negative bending moment, different strain energies of a structure.
- 4. Local strength problems: Expressions for bending moment and deflection of a simply supported beam and its calculation, expression for bending moment and deflection of a fixed ended beam and its calculation, equations for calculating bending moment of fixed ended beams, procedure to determine the total bending moment of a fixed ended beam, expressions of shearing force, bending moment and deflection for a flooded watertight bulkhead of a ship, redundant structures, portal frame, evaluation of the end/corner moment of a portal frame, influence of rigidity of surrounding structure, explanation of the importance of the rigidity of the post and stay of a derrick.
- 5. **Buckling of Structures:** Assumptions need to be considered in the theory of buckling of structures, different states of equilibrium from the viewpoint of buckling of structures, expression for critical load and critical stress for a hinged ended column, expression for total maximum stress for a column with initial curvature, expression for critical stress considering buckling of a simply supported rectangular plate.
- 6. **Dynamic Effects:** Response of ship due to its heaving motion in still water considering undamped vibration and damped vibration, influences on damping due to heaving motion, equation for natural pitching period, and equation for pitching angle amongst waves.
- 7. Theory of Plates: Bending of wide plates, bending of panels of plating, simply supported rectangular plates, simply supported plate with uniformly distributed load, solution of plate problem by strain energy method, rectangular plate bending, plates with clamped edges, application of plane stress theory to ship structural problems, simple grillage, multi-stiffener grillages, simply supported grillages, two materials with the same elastic modulus, two materials of different elastic moduli, bending of a composite beam, superstructure efficiency, Crawford's theory.

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

The knowledge of Ship Design course is intended to provide the fundamental characteristics of a ship's design and how they affect its behaviour at sea are of crucial importance to many people involved in the design of all marine vessels. This course will help to develop and apply key theories and principles associated with the design of various types of vessels also develops fundamental naval architecture knowledge, including a thorough exploration of its concepts and how they are practically used in applications in ships.

OBJECTIVES

- 1. To enable to interpret and apply the design and iterative procedure principles of ship.
- 2. To enable to impart knowledge on appropriate calculations and interpret outcomes in naval architecture tasks.
- 3. To make skillful to explain a project that not only will satisfy regulations and requirements, but also will fit in the marine environment, economic trends and the accelerating advance of technology.
- 4. To enable to design different ship efficiently and effectively.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. **Estimate** the values of design optimization parameters, capacities and performances
- 2. Apply knowledge in practical ship designs.
- 3. Analyze design philosophy and design aspects of different type of ships
- 4. **Compare** characteristics of the design features of different ships

- 1. Introduction to ship type.
- 2. Design, general arrangement, construction, midship section, structures, equipment, propulsion and other important systems, operations, environmental concerns of general Ships (Cargo ship, Passenger ship, Container ship, Tankers etc.)
- 3. Operations, environmental concerns, special features of special types of ships (Ro-Ro Ship, Fishing Trawler, Tug, Dredger, Submarine, Warship, Yacht etc.)

PRE-REQUISITE None

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

Application of ship design software course is designed to teach students about the basic design drawings of different types of ship and floating structures by using AutoCAD, Maxsurf and Rhinoceros software. Students will be able to perform necessary calculations related to the basic design of ship, hydrostatic, trim and stability, resistance and required power calculations. It is expected that students will develop critical thinking about measuring characteristics of different parameters precisely, able to check their effects using calculations and finally chose the appropriate feature.

OBJECTIVES

- 1. To enable students to be familiarized and produce lines plan of ship in 2-D and transform 2-D lines plan into 3-D lines plan.
- 2. To enable students to generate ship's hull from 3-D lines plan.
- 3. To enable students to draw different types of ship from preliminary particulars and perform different types of analysis on the designed ship.
- 4. To apply trim, stability and resistance calculation on designed ship.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. **Produce** 2-D and 3-D lines plan from offset table for designing ship that meet specified needs with appropriate consideration for safety, and environmental considerations.
- 2. **Develop** 3D hull from lines plan applying appropriate techniques, resources, and modern ship designing tools.
- 3. Evaluate and assess principal particulars and reach to the design of a ship.
- 4. **Recognize** the need to analyze the hydrostatic properties of ships to produce hydrostatic curves and prepare trim, stability, and resistance calculation of the designed ship, to engage in independent and learning.

- 1. **Rhinoceros:** Introduction about the Rhinoceros software. Use of surface and solids. Use of 3-D lines generated in AutoCAD into Rhinoceros and develop hull surface.
- 2. **MAXSURF:** Introduction to the Maxsurf software. Use of generated hull in Rhinoceros into the Maxsurf and analysis of hydrostatics, and stability parameters.

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

SYNOPSIS/RATIONALE

Compulsory Theoretical Course

Marine Engineering-I course is designed to teach students about the basic concepts of Engines, details of components, operation, combustion of Internal Combustion Engine, components & operation of Gas Turbine used in ships, Marine fuels & properties and components and details of Ships Shafting system. Students will be able to select the suitable marine engine, fuels and lubricants and shafting system for the ships including necessary calculations related with them. It is expected that students will be able to analyze critically for the selection of correct machinery and propulsion system for the designed ship. Students will also be able to analyze the defects of machinery and ships shafting system while working as Marine engineer on board.

OBJECTIVE

- 1. To learn the details of Marine Engines and Gas Turbine.
- 2. To Calculate the power and efficiency of IC Engine and gas turbine
- 3. To analyze and learn about different marine fuels.
- 4. To provide the concepts of Various shafting equipment and System

COURSE OUTCOMES (COS)

On successful completion of this course, students should be able to:

- 1. **Describe** and **evaluate** the components, special features and working principals of different types of Marine engine and gas turbine.
- 2. Calculate and interpret the power and efficiency of IC Engine and gas turbine.
- 3. **Explain** the properties and characteristics of various marine fuels and their impact on engine performance and emissions.
- 4. Analyze the principles and mechanisms of the power transmission system in marine vessels.

COURSE CONTENT

1. Marine Engines

- a. **Diesel Engine**/ **CI Engine**: Related terminology and definitions, Valve timing diagram, CI engine: Basic parts of CI engines, Types, Combustion including phases, Fuel pump mechanism and operation, governor mechanism and operation.
- b. **SI engine:** Combustion of SI engine, Carburetor, Supercharging, scavenging, low load running, and lube oil testing etc., Engine operation, testing and Fuel metering.

- c. **Gas Turbine:** Description of major components of GT, Working principle, Practical session on GT propulsion, Construction of compressor and combustion chamber of GT, Various system of GT, Advantage and disadvantage.
- d. **Engine diagnosis and fault finding:** Crankcase explosion, Crankshaft deflection, Load trials. Selection criteria of marine engine.

2. Marine Fuels

Types (Petrol, Diesel, Octane, Bio fuels etc.), Octane No, Centane No, Gravity and testing, Description and characteristics of HSDO, LHSDO, IFO

3. Power Transmission

- a. Principle and mechanism of Gearbox: Coupling and clutch, solid drive coupling, Fluid drive coupling, and other couplings.
- b. Description of ship's shafting system, Description of components, Construction and operation: Thrust block, Plummer block, Bulkhead gland, Stern tube, loose coupling.
- c. Shafting alignment requirements and various methods

RATIONALE

Marine Engineering Sessional – I course is designed to familiarized the students with various types of marine machineries and give an overview about their construction and working principles. The students will be able to relate their theoretical knowledge with the experiments performed in this course and comprehend those with industrial training.

OBJECTIVES

- 1. To give an overview and idea about the machineries used in marine vessels and shipbuilding industries
- 2. To enable students to be familiarized with the construction (assembling and disassembling), functions and performance test of different engine and its associated components.
- 3. To enable students to be able to critically analyze shipboard conditions and effectively select, operate, and troubleshoot the appropriate propulsion system and auxiliary equipment to ensure safe, efficient, and reliable vessel operation.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. Outline different kinds of marine machineries and knows their working principle and construction.
- 2. Conduct the workability of the engines by interpretation of performance tests.
- 3. Apply practical knowledge of ship propulsion systems and auxiliary equipment.

- 1. Study of SI and CI engine
- 2. Dismantling and assembling of Diesel Engine
- 3. Study of valve timing and diagram
- 4. Study of tappet adjustment and bumping adjustment
- 5. Performance test of a high-speed diesel engine
- 6. Study of shafting & propulsion system
- 7. Study of heat exchanger
- 8. Study of steam boiler and steam turbine unit
- 9. Study of Gas turbine
- 10. Study of air compressor and refrigeration system

PRE-REQUISITE

Course Code: NAME 201 Course Title: Mechanics of Structure

RATIONALE

Compulsory Theoretical course based on machine functions and mechanism to design machine elements for efficient operations.

OBJECTIVES

- 1. To enable to design considering stresses, stress concentration, failure theories and types of fits.
- 2. To achieve ability to familiarize the students with fracture mechanics, fatigue strength and strength of materials.
- 3. To teach students the design of screws, belt and chain drives, spring, welded and riveted connections.
- 4. To enable the students to design various types of gears.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. Analyze stress, stress concentration and suitable types of fits.
- 2. Understand and analyze fatigue strength and strength of material.
- 3. **Design** screws, springs, welded and riveted joints and belt & chain drives.
- 4. **Design** various types of gears.

COURSE CONTENTS

- 1. **Fundamental Principles of Machine Design:** Working Stresses and Failure Theories; Stresses in curved members; Deflection and stiffness considerations; Column design; Statistical considerations; Types of fits.
- 2. **Design parameters:** analysis with isotropic and anisotropic materials. Design for static strength; Fracture mechanics in design; Design for fatigue strength. Design of screws, fasteners and connections; Keys and couplings, welded and brazed joints; Shafts, keys and couplings, Power screws and bolted connections, Belt and chain drives, Brakes and clutches, Welded and Riveted Connections, rope, belt and chain drives. Springs,
- 3. Shaft Piston
- 4. **Gears and Gearing systems:** spur, helical, worm and bevel gears, Toothed gearing, Gear trains. Design of marine shafts, stern tube and associated bearings
- 5. **Shock and vibration:** Properties and design for damping and arresting of vibration. Bearings: Friction, Design of Journal, Ball, Needle and Roller bearings.
- 6. **Lubrication of machine elements:** Boundary, Hydrostatic and Hydrodynamic lubrication systems.

PRE-REQUISITE

Course Code: NAME 207 **Course Title:** Introduction to Naval Architecture and Marine Engineering, Ship Design

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

Ship construction and welding course based on construction procedure of a ship from start to finish to get quality product. All the latest classification society based international regulations and technological developments of standard welding procedure and fabrication of different structural arrangement are applied to the building procedure of a structure.

OBJECTIVES

- 1. To enable to identify, diagnose and rectify of common welding defects.
- 2. To enable to impart knowledge on how consistent weld quality is achieved in practice, through classification society rules, welding procedure specification and weld monitoring and control.
- 3. To make skillful to explain the main activities involve in ship construction.
- 4. To enable to prepare a complete flow chart of ship construction process.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. **States** common welding codes and standards in the welding industry, the quality of welds and welded fabrications.
- 2. **Interpret** standard construction procedure thorough knowledge of ship design.
- 3. Apply rules and regulations related to shipbuilding during construction of vessel.
- 4. **Evaluate** of welding for welding of different units and blocks of the ship and detailed inspection, documentation and reports on findings including corrective actions.

COURSE CONTENTS

- 1. Introduction to Welding:
- 2. Welding details: Different types of welding and their equipment.
- 3. Welding Principle and Methods: MMAW, GMAW, SAW, Electro slag welding, TIG and SS welding, MIG and aluminum welding.
- 4. Welding Sequences and Defects: Welding symbols, welding sequence in shipbuilding, Types of welding joints, Types of welding and defect, Common defects in ship welding: welding distortion monitoring and control, inspection and testing of welded specimen.
- 5. Nondestructive Testing (NDT)Methods and Techniques: Difference Between Destructive and Non-Destructive Testing, Advantages of using NDT, Application of NDT, Major Six Methods: eddy-current, magnetic-particle, liquid penetrant, radiographic, ultrasonic, and visual testing.

- 6. Details of Ship Structural Member: Bottom structure, Keel, Single Bottom structure, Single Bottom structure, Double bottom Structure, Shell Plating, Framing, Tank side Bracket, Bilge keel, Bulkhead, Water tight doors, Deep Tank, Topside Tank, Pillars, Deck, Hatches, Bulwark, Superstructure and Deck house, Stem, Bulbous Bows, Chain Locker, Hawse pipe, Rudder, Shafting, Plate and section preparation, Frame Bending.
- 7. Defects in Ship Structure: structural discontinuity, stress concentration, remedial measures, Cathodic protection, surface preparation and painting.
- 8. Shipyard Facilities: various shops and production facilities and their layout, Process of ship construction, Numerical control.
- 9. Boat building by materials other than steel, conventional ship construction and block construction method.

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

This course discusses the selection and evaluation of commercial and naval ship power and propulsion systems. It provides the fundamental aspects as well as practical considerations for ship resistance and associated powering requirements, propeller design and engine selection.

OBJECTIVES

- 1. To demonstrate knowledge and understanding on components and estimation methods of the resistance of a ship or marine vehicle.
- 2. To familiarize the students with the principles of propeller design and figure out the delivered power of a ship or marine vehicle.
- 3. To induce the ability among students to analyze the powering requirements and to select engine for fulfilling service requirements of a ship or marine vehicle.
- 4. To be able to calculate cavitation related problems for propulsion systems.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. **Demonstrate** knowledge and understanding on components and estimation methods of the resistance of a ship or marine vehicle.
- 2. **Apply** the principles of propeller design in developing suitable propulsion system for a marine vehicle.
- 3. Analyze the powering requirements to select engine for fulfilling service requirements of a marine vehicle.
- 4. Evaluate cavitation related problems and minimization of it for propulsion systems.

COURSE CONTENTS

Theory of Resistance

- 1. Resistance of a ship and its component, Towrope or effective power, Effective Horse Power.
- 2. Dimensional Analysis of Ship Resistance, Total Resistance Coefficient. Wake, Eddy.
- 3. Different Resistance at different part of Vessel. Definition of Powers and Efficiencies, Forces, velocities, powers and resistances at different locations of vessel
- 4. Overall Concept for Powering a Vessel. Definitions of various power, Parts of estimates of power, Ship power estimate flowchart.
- 5. Ship resistance determination with model test, Description of Towing Tank with different facilities required for a standard ship model testing facility, Ship model test Purposes.
- 6. Laws of Comparison: Geometrical Similarity, Kinematic Similarity, Dynamic Similarity. Dynamic Similarity in case of Incompressible. Frictionless Fluid and No Free Fluid Surface.
- 7. Froude experiment on friction, Work of towing tank conference on frictional resistance, threedimensional viscous resistance formulations, the work of ITTC on Three-Dimensional Viscous

Resistance Formulation.

- 8. Calculation of resistance and effective power by three- dimension extrapolation procedure, Corresponding Speeds, Relation of Residuary Resistance with Displacement, Calculation of resistance and effective power by two-dimension extrapolation procedure
- 9. Air & Wind Resistance Calculation, Shallow water effect, Shallow Water Effect with narrow channel effect.

Theory of Propulsion

- 1. Types of modern propulsion systems and characteristics.
- 2. Propeller Geometry, Manufacturing, Generator & Rake, Skew, Propeller Sections, face and back of the blade, face or geometrical pitch, Typical Blade Sections, the pitch angle, representative mean pitch, relation between pitch and pitch angle, velocity diagram of a section. Wake fraction, Thrust deduction factor.
- 3. The Axial Momentum Theory of Propeller Action, The Momentum Theory including Angular Motion, Derivation of Blade Element Theory of Screw Propeller, Math on Blade Element Theory, Math on Momentum Theory
- 4. Slip, Slip Angle, Real Slip Ratio, Slip ratio, PPR face, back, leading edge, trailing edge, angle of attack, Skew, Rake, Disk area, projected area, developed area, expanded area.
- 5. Cavitation, Cavitation Number, Local Cavitation Number, Use of standard series data, Math on Cavitation.
- 6. Open Water Characteristics, Propeller Hull Interaction (Wake gain, thrust deduction, relative rotative efficiency) Propulsive Efficiency and Propulsion Factor, Standard series and Wageningen B PPR series, Math on Power & Efficiency
- 7. Overview of main engine selection considerations, Introduction to ship power train components. Stern tubes, shafts, bearings, Propeller engine matching.

RATIONALE

Resistance and Propulsion Sessional course is designed to teach students how to calculate the different components of ship resistances. Students will be able to perform necessary calculations related to propulsion power and cavitation. It is expected that students can develop critical thinking behind propeller design features, able to check their effects using calculations and finally chose the appropriate feature.

OBJECTIVES

- 1. To enable students to be familiarized with resistance and power calculations of ships.
- 2. To familiarize the students with the design of screw propeller.
- 3. To enable students to compute wake of a ship.
- 4. To apply cavitation calculation on ship design.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. **Identify** the components of ship resistance.
- 2. Calculate the frictional and residual resistance.
- 3. **Perform** 2D and 3D extrapolation using ITTC methods.
- 4. **Identify** geometric parameters of a propeller.
- 5. **Calculate** cavitation and relevant characteristics.

COURSE CONTENTS

- 1. Calculation of residual resistance and frictional resistance
- 2. Calculation of wind resistance, Calculation of total resistance & effective power.
- 3. Propulsion & powering calculation.
- 4. Determination of the geometry of blade sections for B-series propeller and its design.
- 5. Calculation wake of a ship.
- 6. Resistance & power calculation of high speed planning hull using Savisky's method
- 7. Calculation of resistance of displacement, semi-displacement and planning hulls using Holtrop-Mennon method.
- 8. Design of a screw propeller using circulation theory.
- 9. Calculation of 2D and 3D extrapolation using ITTC methods.
- 10. Calculation of cavitation.

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

Compulsory Theoretical Course based on different numerical methods applied to solve various problems in the fields of engineering.

OBJECTIVES

- 1. To explain the consequences of finite precision and the inherent limits of the numerical methods considered,
- 2. To select appropriate numerical methods to apply to various types of problems in engineering and science considering the mathematical operations involved accuracy requirements and available computational resources.
- 3. To enable to demonstrate understanding and implementation of the mathematical concepts and algorithms underlying the numerical methods considered.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. **Explain** the consequences of finite precision and the inherent limits of the numerical methods considered.
- 2. **Select** appropriate numerical methods to apply to various types of problems in engineering and science considering the mathematical operations involved, accuracy requirements and available computational resources.
- 3. **Demonstrate** understanding and **implementation** of the mathematical concepts and algorithms underlying the numerical methods considered.

COURSE CONTENTS

- 1. Introduction: Errors in Numerical Calculations, Vector and Matrix Objects,
- 2. Solution of System of Linear and Nonlinear Equations: Gaussian Elimination with Backsubstitution, LU Decomposition, Tridiagonal and Band-Diagonal Systems of equations, Singular Value Decomposition, Sparse Linear Systems, Newton-Raphson Method for Nonlinear Systems of Equations, Globally Convergent Methods for Nonlinear Systems of Equations.
- 3. **Interpolation and Extrapolation:** Polynomial Interpolation and Extrapolation, Cubic Spline Interpolation, Rational Function Interpolation and Extrapolation, Interpolation on Scattered Data in Multi-dimensions, Laplace Interpolation.
- 4. **Integration of Functions:** Improper Integrals, Romberg Integration, Quadrature by Variable Transformation, Gaussian Quadratures and Orthogonal Polynomials, Multi-dimensional Integrals.
- 5. Evaluation of Functions: Polynomials and Rational Functions, Evaluation of Continued

Fractions, Series and their Convergence, Recurrence Relations, Chebyshev Approximation, Polynomial Approximation from Chebyshev Coefficients, Pade Approximations, Evaluation of Functions by Path Integration.

- 6. **Sorting and Selection:** Straight Insertion, Shell's Method, Quicksort, Heapsort, Indexing and Ranking, Determination of Equivalence Classes.
- 7. **Root Finding:** Secant Method, Bisection, False Position Method, Ridder's Method, Newton-Raphson Method using Derivative, Roots of Polynomials.
- 8. **Eigen Systems:** Jacobi Transformations of a Symmetric Matrix, Eigen vlaues and Eigenvectors of a Tridiagonal Matrix, Hermitian Matrices, QR algorithm for Real Hessenberg Matrices,
- 9. Least Squares, B-splines and Fast Fourier Transform: Least-squares curve fitting, weighted Least-squares approximation, Method of Least-squares for Continuous Functions, Cubic B- splines, Fast Fourier Transform.
- 10. **Numerical solution of Ordinary differential equations:** Solution by Taylor's Series, Euler's Method, Runge-Kutta Methods, Predictor-Corrector Methods, The Cubic Spline Method,

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

This course is designed to form a basic understanding of research methodology that is what are the important components to look for while conducting research, how to conduct research and what to expect from the done work in the process. This course will expose the students to the promising career in various research fields and make them understand the importance of research methodologies in science and engineering.

OBJECTIVES

- 1. To identify and create the key components of a research proposal
- 2. To be able to demonstrate the ability to conduct literature reviews and gather the critical scientific information related to the research proposal
- 3. To develop the skills to objectively review and write a scientific critique of a colleague's proposal
- 4. To describe the important concepts related to engineering subjects in scientific research
- 5. To be aware of the underlying concepts and principles of scientific misconduct and plagiarism.
- 6. To be able to demonstrate writing skills by writing, a clear, concise Thesis Paper with scientifically defensible aims, methods and conclusions

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. **Attain** academic knowledge through relevant literature to cultivate the problem statements and objectives of the research work;
- 2. **Formulate** the different components of research methodology incorporating fundamentals, theories and standard regulation;
- 3. **Conduct** research experiments, reliability and validity of experiments, interpret data and **deduce** logical conclusions based on knowledge in the broadest context;
- 4. **Communicate** through clear research writing adapt to standard thesis format and performs oral presentation;
- 5. **Recognize** the concept and idea of existing research through proper citation;
- 6. **Perform** and **produce** whole research work as an individual or member/leader of a team.

COURSE CONTENTS

1. Foundations of Research: Meaning, Objectives, Motivation, Utility. Concept of theory, empiricism, deductive and inductive theory. Characteristics of scientific method –

Understanding the language of research – Concept, Construct, Definition, Variable. Research Process.

- Problem Identification & Formulation Research Question Investigation Question Measurement Issues – Hypothesis – Qualities of a good Hypothesis –Null Hypothesis &Alternative Hypothesis. Hypothesis Testing – Logic &Importance.
- 3. **Research Design:** Concept and Importance in Research–Features of good research Design– Exploratory Research Design – concept, types and uses, Descriptive Research Designs – concept, types and uses. Experimental Design: Concept of Independent & Dependent variables.
- 4. **Qualitative and Quantitative Research:** Qualitative research Quantitative research Concept of measurement, causality, generalization, replication. Merging the two approaches.
- 5. Use of tools / techniques for Research and Interpretation of Data

TEACHING METHODOLOGY

Lecture followed by consultation with respective supervisors, co-operative and collaborative method, project-based method

Term – I	
Week 1	Foundations of Research: Meaning, Objectives, Motivation, Utility.
	Concept of theory, empiricism, deductive and inductive theory.
	Characteristics of scientific method – Understanding the language of
	research – Concept, Construct,
	Definition, Variable. Research Process. + Consultation with Supervisor
Week 2	Problem Identification & Formulation – Research Question – Investigation
	Question - Measurement Issues - Hypothesis - Qualities of a good
	Hypothesis – Null Hypothesis & Alternative Hypothesis. Hypothesis Testing
	– Logic &
	Importance+ Consultation with Supervisor
Week 3	Written Proposal
Week 4	Proposal Presentation
Week 5	Proposal Presentation
Week 6	Research Design: Concept and Importance in Research – Features of a
	good research design - Exploratory Research Design - concept, types
	and uses +
Week 7	Consultation with Supervisor
week /	Descriptive Research Designs – concept, types and uses + Consultation with Supervisor
Week 8	Experimental Design: Concept of Independent & Dependent variables +
WEEK O	Consultation with Supervisor
Week 9	Qualitative and Quantitative Research: Qualitative research – Quantitative
Week 2	research – Concept of measurement, causality, generalization, replication.
	Merging the two approaches + Consultation with Supervisor
Week 10	Progress Presentation – I
Week 11	Progress Presentation – I
Week 12	Use of tools / techniques for Research and Interpretation of Data + Consultation
	with Supervisor
Week 13	Report Writing – Layout of a Research Paper + Consultation with Supervisor
Week 14	Ethical issues related to publishing, Plagiarism and Self-Plagiarism +
	Consultation with Supervisor
Term – II	
Week 1	Consultation with Supervisor.
Week 2	Consultation with Supervisor
Week 3	Consultation with Supervisor + Preparation for Progress Presentation
Week 4	Consultation with Supervisor + Preparation for Progress Presentation
Week 5	Progress Presentation – II
Week 6	Progress Presentation – II
Week 7	Consultation with Supervisor

PRE-REQUISITE

Course Code: NAME 213, NAME 253 **Course Title:** Fluid Mechanics, Marine Hydrodynamics

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

The course presents a unified approach to two seemingly different fields of Ship Theory; that is the maneuvering and the seakeeping. Motion dynamics of a ship regarded as a rigid body in a general motion with six-degree-of-freedom is considered. The effects of non-linearities of the applied sub-models on the physical phenomena associated with the ship behavior are discussed

OBJECTIVES

- 1. To demonstrate knowledge and understanding of the underlying principle of linear wave theory and its induced motions and loads on a ship.
- 2. To be able to apply techniques to predict the roll, pitch and heave motion of a vessel Travelling in regular waves and irregular waves and assess vessel motions against seakeeping criteria
- 3. To describe concepts of dynamic stability in irregular waves and methods to predict the likelihood of slamming on ships
- 4. To enable to predict and assess the maneuvering behavior of a vessel.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. **Describe** the underlying principle of linear wave theory and it's induced motions and Loads Ona ship.
- 2. **Demonstrate** the application of analytical methods for calculating ship motion in the regular and irregular seaways.
- 3. **Describe** the concepts of dynamic stability in irregular waves and methods to predict the likelihood of slamming on ships.
- 4. Apply techniques to predict and assess the maneuvering behavior of a vessel.

COURSE CONTENTS

- 1. Introduction to sea keeping.
- 2. Recapitulation of gravity waves, Wave record analysis, Rayleigh distribution, Gaussian distribution, Spectral representation of the seaway, Directional spectra.
- 3. Ship motion in regular waves-Response amplitude operators, Motions in irregular sea, Shorttime and long-time statistics of waves.
- 4. Rigid body motion of a floating body in waves extended to several degrees of freedom and coupled motions.
- 5. Roll motions and coupled motions of floaters.

- 6. Slamming and deck wetness.
- 7. Introduction to maneuverability, Motion stability criterion, ITTC maneuvering standards,

8. Design of control surface-Rudder design.

Course Code: NAME 177, NAME 277, NAME 309

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

Marine Engineering-II course is designed to teach students about the basic concepts of ships auxiliaries used in ship like Pump, Blower & Compressor, Refrigeration & Air conditioning System, Deck Fittings, Centrifuge, Lifesaving Apparatus and Firefighting equipment etc. Students will be able to select the suitable marine auxiliaries, Refrigeration & AC plant, and Lifesaving apparatus including firefighting appliances. It is expected that students will be able to analyze critically for the selection of correct auxiliary machinery and system for the designed ship. Students will also be able to analyze the defects of different systems while working as Marine engineer on board.

OBJECTIVE

- 1. To analyse the characteristics of all ship fitted auxiliary machineries.
- 2. To compare the characteristics of construction of different auxiliary machinery.
- 3. To evaluate different design parameters and performance to select auxiliary machineries.
- 4. To apply the knowledge of firefighting and lifesaving equipment.
- 5. To make decision about suitable auxiliary machineries for different vessel as a naval architect.

COURSE OUTCOMES (COS)

On successful completion of this course, students should be able to:

- 1. **Describe** the characteristics of all ship fitted auxiliary machineries.
- 2. **Evaluate** different design parameters and performance to select auxiliary machineries.
- 3. **Compare** the characteristics of construction of different auxiliary machinery.
- 4. **Apply** the knowledge of firefighting and lifesaving equipment and to decide about suitable auxiliary machineries for different vessel as a naval architect.

COURSE CONTENT

- 1. **Pumps:** Applications of pumps onboard, Types of pumps, Characteristics of different pump, NPSH, Head calculation.
- 2. **Blowers and compressors:** Applications of compressors onboard, Single stage and multistage compressors, Compressor instability, safety etc.,
- 3. **Refrigeration and air-conditioning**: Thermodynamics, Principles, Load calculation, Construction details of different types of refrigeration and air-conditioning systems, Refrigerants and their characteristics, Maintenance and repair of units and plants.
- 4. **Deck fittings**: Windlasses, Capstan, Winches, Cranes, Cargo access equipment for dry, unitized, liquid and cryogenic cargoes.

- 5. **Steering gear Systems**: Various types of steering system, Characteristics of different steering system, Construction details.
- 6. Stabilizer: Types of stabilizers, Description of different stabilizer used in marine vessels.
- 7. **Pipe**: Pipe materials, Piping systems and valves, Steam traps, anchors, anchor hawse, chains, etc.
- 8. Life Saving Apparatus: Types of life saving apparatus, Operation and use of life saving apparatus.
- 9. **Fire Fighting arrangement**: Types of firefighting equipment, Location of installation, description of fixed firefighting equipment.

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

Marine Engineering Sessional-II course is designed to teach students different kinds of marine engine & auxiliary components and preparing technical specifications of those components or machineries. Students will be able to perform necessary calculations related to machines and prepare technical specifications once the course is completed. It is expected that students will develop critical thinking about how to calculate various machinery parameters thus prepare technical specifications.

OBJECTIVES

- 1. To enable students to be familiarized with different types of machineries in application.
- 2. To familiarize the students with applied and calculative concept of marine machineries and devices.
- 3. To enable students to compute different parameters of ships and machines related to shipyard.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. **Explain** about the different features of marine machineries.
- 2. **Identify** different specifications of a tender.
- 3. **Demonstrate** and **manipulate** the technical specifications of different machineries.

- 1. Calculation of engine power and preparation of technical specification for designing a propulsion system for a specific vessel.
- 2. Selection and preparation of technical specification and selection of an air compressor for sand blasting purpose in a ship yard.
- 3. Study on CNC cutting and bending machine and preparation of technical specification to be used in a ship yard.
- 4. Calculations of the capacity of a pump required for a dry dock or floating dock and prepare its technical specification.
- 5. Calculation of the cooling load and preparation of technical specification of an air conditioning plant for a specific vessel.
- 6. Calculation of the cooling load and preparation of technical specification of a refrigeration plant for a specific vessel.
- 7. Preparation of technical specification, selection and design of steering system of a specific vessel.
- 8. Preparation of technical specification, selection and design of storage unit of a fishing vessel.
- 9. Calculation of electric load and selection of diesel generator unit to be used for specific vessel

and preparation of its technical specification

- 10. Preparation of technical specification and selection of engine analyzer unit to be used for specific vessel.
- 11. Preparation of comparative statement.

PRE-REQUISITE

None

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

Compulsory sessional course based on practical industrial attachment.

OBJECTIVES

- 1. To enable the students to understand the overall management and operation of a shipyard/ dockyard.
- 2. To enable the students to see the design and construction works of a ship practically in the ground level
- 3. To enable the students to understand the different parameters of shipbuilding i.e. materials, welding, painting, trial etc.
- 4. To enable the students to understand the launching, docking and undocking of a ship.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. Gain practical professional experience in Naval Architecture and Marine Engineering;
- 2. Explain the overall management and operation of a shipyard/ dockyard;
- 3. **Develop** an appreciation of the horizon of Naval Architecture and Marine Engineering which helps to gain life-long learning capability;
- 4. Use management tools to handle different categories of work forces;
- 5. Manage the crisis and resolve the challenges in shipyard operation;

COURSE CONTENTS

- 1. Industry organogram, office admin of industry, flow of job responsibilities in industry etc.
- 2. Activities of various department/office in the shipyard
- 3. Ship construction procedures/methods, phases of construction
- 4. Various machineries and automation procedure in a shipyard/ dockyard
- 5. Attachment with various marine workshop/ institutes to see the practical work pattern and procedures.
- 6. The schedule and detail contents will be fixed by the shipyard/industry according to their convenience.

PRE-REQUISITE

Course Code: NAME 207 **Course Title:** Ship Design

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

The maritime economics and management is a concept as well as application based theoretical course which is essential for all undergraduate students in the field of Naval Architecture & Marine Engineering. This course enhances the competency of students to work and make decision on ship design and financial estimation in shipyard, dockyard and maritime shipping industries after their graduation.

OBJECTIVES

- 1. Be able to impart knowledge on worldwide maritime shipping routes and shipping phenomena.
- 2. Achieving ability to apply decision tree in selection of size and type of vessels in procurement and design process of a fleet.
- 3. Be proficient to design cost effective ships as per owners' requirements.
- 4. Be able to develop new tools for ship design throughout the shipbuilding career.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. **Comprehend** the global shipping and maritime management.
- 2. **Analyse** consolidates and synthesize knowledge select shipping elements in the global logistics and maritime management domain.
- 3. **Apply** appropriate engineering management tools in maritime shipping and related economic activities.
- 4. **Design** modern management tools for ship design and construction.

- 1. Overview of global maritime domain and its system.
- 2. Blue economy and its components.
- 3. Understanding the maritime transportation management.
- 4. Elements of shipping; Freight market and operating economics; Chartering of ships.
- 5. Shipbuilding cost estimation; Maritime related tendering and contracts.
- 6. International payment systems and money flow mechanism.
- 7. Commercial, marketing, legal and financial aspects of shipbuilding and shipping.
- 8. Alternative maritime designs. Overall optimization for speed size combinations of ships.
- 9. Relative importance of technical and economic features of marine vehicle design, Importance and application of ICT in maritime designs.
- 10. Safety management concept in ships and ports and ISO certifications.

- 11. Management practices in maritime projects.
- 12. Goal based design, construction and repair/maintenance of marine vehicles.
- 13. Role of IACS, class surveyors and other maritime agencies.

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

This course aims to provide the knowledge of the shipbuilding and ship repair sector. In order to gain the essential skills and knowledge required, enabling to successfully run and manage the building and repair process the content of this course is essentially important. An array of challenging topics such as the docking process, specifications and docking incidents and accidents, ship repair special rules, contracts and project management is integral part of this course.

OBJECTIVES

- 1. To identify and rectify of different defects and damage of structure.
- 2. To impart knowledge on ship repair and maintenance technology with a view to perform shop floor work at ship building or ship repair industries.
- 3. To make skillful to explain quality product by providing quality and effective tools.
- 4. To enable to strike a balance between theoretical and practical skills.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. States the various methods of corrosion and corrosion prevention.
- 2. Apply knowledge in machinery maintenance.
- 3. **Demonstrate** as a relevant engineer on board and their activities.
- 4. **Analyse** the aspects of welding, hull survey and paint scheme.

- 1. Maintenance requirements: Corrosion, fatigue, Marine fouling.
- 2. Failure causes: Fatigue failure of structural members, deformation failures, Failure due to corrosion. Repairs to failures.
- 3. Measures for failure of structural members due to deformation, corrosion, fatigue, crack detection etc.
- 4. Prevention of marine growth and removal of marine growth both in dry and wet condition.
- 5. Design considerations with regard to maintenance. Welding repair decision model.
- 6. Classification requirements of hull survey, identification of defects, plates and welds. Plate cutting and welding, tolerance requirements, distortion removal.
- 7. Underwater welding: Dry and wet.
- 8. Welding inspection.
- 9. NDT tests to survey ship for repair
- 10. Impact of preventive maintenance and repair techniques on operation.

11. Maintenance Schedule. Machinery Maintenance (Marine Engine and Generator set): Top overhauling, Major overhauling

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

Numerical Methods Sessional course is designed to teach students the basics of programming in general and programming MATLAB in particular using the knowledge gained in Numerical Methods theory course. Students will be able to solve programming problems & perform computation, apply numerical methods in problem solving and analyse ideas to solve problem. It is expected that students can develop critical thinking behind developing codes and able to check their calculations.

OBJECTIVES

- 1. To enable students to be familiarized and implement different programming concept in application.
- 2. To familiarize the students with applied and calculative concept of MATLAB.
- 3. To enable students to compute different parameters of ships using programming concept of MATLAB using numerical methods.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. Solve programming problems and Perform computations with the aid of MATLAB.
- 2. Apply numerical methods in problem solving and assignments.
- 3. Analyse and Contrast ideas to solve complicated problems.

- 1. Introduction to MATLAB; Errors in Numerical Techniques: Calculation of Truncation Error in a Series, Approximation.
- 2. Solution of nonlinear equation by numerical method: method of false position.
- 3. Finding roots of a equation by Newton Raphson method.
- 4. Interpolating a table of data by Newton's forward and backward difference interpolation formula, Lagrange's Interpolation formula and Inverse Lagrange's Interpolation formula
- 5. Numerical differentiation for equidistant x by Newton's and Stirling's Interpolating Formulae
- 6. Numerical Integration Formulae (Trapezoidal and Simpson's 1/3 rule) for Equidistant x coordinates
- 7. An Application of Numerical Integration in Fourier Series
- 8. Solution of Simultaneous Equation of a Linear System by Gauss-Jordan (direct) Method
- 9. Solution of Simultaneous Equation of a Linear System by Gauss-Seidal (Iterative) Method
- 10. Fitting Linear and Nonlinear curves from experimental data by Least Square Method

Course Code: NAME 107, NAME 207 **Course Title:** Introduction to Naval Architecture and Marine Engineering, Ship Design

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

Optional Theoretical Course based on in-depth knowledge on Ship Production by using software. The goal of this course is to provide the basic concepts and tools of computer aid ship design and how to apply these concepts and tools in practical computer aided ship design problems.

OBJECTIVES

- 1. Be able to impart knowledge on 3D modelling.
- 2. Achieving ability to familiarize the students with the industry standard designs.
- 3. Be proficient to produce ships' hull and other critical parts.
- 4. Be able to determine the effectiveness of CAM in ship designing.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. **Develop** 3D hull modelling and **fit** internal structures
- 2. Produce a limited set of design drawings to industry standards
- 3. **Develop** a concept design based on an appraisal of operational requirements
- 4. Create an assembly of parts, create a detailed drawing, assemble a manufacturing environment.
- 5. **Create** basic NC sequences necessary for material removal.
- 6. **Perform** ship design, production, management and critically **assesses** their contribution and effectiveness.

- 1. Introduction to computer aided manufacture (CAM)
- 2. Surface modeling, B-spline, non-uniform rational B-spline.
- 3. physically based deformable surface, sweeps and generalized cylinders
- 4. offsets, blending and filtering surfaces
- 5. Mathematical representation of hull form
- 6. Numerical control (NC) and robotics application in CAM
- 7. shell plate development
- 8. Modern ship production methods in a total ship system and concurring engineering context
- 9. Basic fabrication and material handling processes, process planning and scheduling.

- 3. Ship Production, Hammon and Moore.

Course Code: NAME 337 Course Title: Inland Water Transportation System Level and Term: Level 3 Term II Credit Hours: 3.00 Contact Hours: 3.00

PRE-REQUISITE None

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

Optional Theoretical Course which emphasizes the Inland Water Transportation System, operations and efficient movement of freight and passengers. Students are exposed to the processes used for managing inland waterway operations to managing system-wide operations. It will benefit students wishing to pursue engineering employment in waterway industries with a shipping company or governmental agency or a company providing services to the industry.

OBJECTIVES

- 1. To enable the students to identify the pattern and develop a network for inland water system.
- 2. To enable for selection suitable vessel for inland water transportation.
- 3. To make decisions on the mode of inland water transportation.
- 4. To provide the students with a basic understanding to identify and comply with the rules and regulations for inland water transportation system

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. **Explain** the pattern of inland water transportation.
- 2. **Develop** network system for inland water.
- 3. **Identify** the suitable vessels and their characteristics for inland transportation.
- 4. **Design** of the suitable vessels for inland transportation.
- 5. Make decisions on the modes of inland water transportation
- 6. **Identify** special regulations for inland transportations.

- 1. Inland Water Transport System: Advantage, limitation, Government strategy, Responsibilities of different organizations.
- 2. Inland waterways & their peculiarities, Classification, Development constraint, Recommendation relating to waterway network.
- 3. Maintenance of navigational channel: siltation, bank erosion & dredging.
- 4. Requirements for dredging, dredging technique, disposal of sediments, dredging of fairways.
- 5. Inter-modal transportation, Specialized inter-modal transportation vessel.
- 6. Design of inland waterway transportation system, Design & operational aspects of small craft.
- 7. Design of specialized inland vessel, tug-barge system.
- 8. Different type of tug, barge & connection system, Shallow draft tug, inland passenger vessels, research vessel, pontoon, hydrofoil, Ro- ro vessel, etc., Marine Salvage.
- 9. Inter-modalism and multi-modalism, advantage and disadvantage, Intermodal Transport Chain,

10. Intermodal Transport Units, Techniques & Costs, Inter-modality at Inland Water Transport,

11. Intermodal Transportation networks, Transport system & network design, SSCA & MEA

12. Intermodal design process guideline, Framework for intermodal networks design at IWT.

PRE-REQUISITE

Course Code: NAME 307 **Course Title:** Design of General and Special Ships

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

Port and Harbor Engineering theoretical optional course aims to impart knowledge on port and harbor infrastructure, analyses how ports are organized, managed and planned and related with transport chain. Students specializing in this program must understand the significance and challenges related to ports and harbors.

OBJECTIVES

- 1. To ensure a thorough knowledge and understanding of port and harbor types, characteristics, planning and cargo handling.
- 2. To enable to find out design solution for various types of environmental and operational challenges.
- 3. To give an overview about ports of Bangladesh.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. Analyze design philosophy, design aspects and construction, of port and harbor.
- 2. **Explain** and **estimate** different types of environmental and operational loads encountered by port and harbor.
- 3. **Design** and **plan** to integrate port and harbor infrastructure.
- 4. **Demonstrate** the basic design of port and terminal layout.
- 5. **Apply** the knowledge in different port structure design which will help to select a suitable port in Bangladesh.

- 1. **Introduction:** Introduction to Port and Harbor, Port and Harbor characteristics, Ship characteristics and tonnage calculation, Port and Harbor planning, Access channel, Wharf, Quay, Pier and Jetty
- 2. **Berthing and Mooring:** Structure, Requirement, Berthing Area and Anchorage area, Mooring, Mooring system layout, Anchor, The Rode System, The Mooring Buoy, Pennants, Dolphin Berthing environment and energy calculation, Fender selection and fender system design
- 3. Cargo Handling in ports (Container, Container Cranes, Bulk Cargo)
- 4. **Natural Phenomenon and Loads:** Wind, Wave, Tide, Current loads, Operational loads and other Environmental loads.

- 5. **Breakwater:** Concept on breakwater, Arrangement of breakwater, Design Process of breakwater, Types of breakwaters, Wave Structure Interactions, Rubble mound breakwater, Vertical breakwater: types and construction, Floating breakwater: Classification of floating breakwaters and their details, Advantage and Disadvantage, Floating breakwater design
- 6. **Port Functions, Organization and Planning Methodology:** Port Functions, Transport chain, Organization of seaports, Types of planning, planning process, Planning tasks, functional requirements and planning elements, Layout development, evaluation techniques, Economic and financial analysis
- 7. Port Terminals and Container Terminals: Planning and Design: Terminal components, types of terminals, Terminal capacity: maximum or optimum, terminal dimensions, Container transport and terminal operations, Lay-out development of container terminals
- 8. **IMO and Marine Pollution from Ships:** UNCLOS, GESAMP, Sources of pollution, Existing IMO instrument, Management of ballast water: BWM, General Obligations Under the BWM Convention, BWM plan and standard
- 9. Sea and River Ports of Bangladesh: Chittagong Port Authority, Mongla Port Authority, Payra Port Authority: facilities, strength and weakness, River Ports of Bangladesh and their Assessment.

Course Code: NAME 201, NAME 301 **Course Title:** Mechanics of Structure, Ship Structure

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

This optional theoretical course is intended to provide students with the necessary fundamental knowledge about the implementation of Finite Element Method for Engineering Analysis. The students should be able to Understand the fundamentals of Finite Element Method and stiffness method to solve engineering problems. Furthermore, after successful completion of this course students will develop skills to solve ship structure problems using finite element analysis.

OBJECTIVES

- 1. To acquire knowledge about the fundamentals of finite element analysis.
- 2. To be proficient in finite element formulations of ship structural problems.
- 3. To be aware of limitations of finite elements and source of errors both in modeling and computation.
- 4. To be able to solve ship structure problems using finite element methods.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. **Comprehend** the fundamentals of finite element analysis and finite element formulations.
- 2. Solve ship structure problems using finite element analysis.
- 3. Interpret results obtained from a finite element analysis.

- 1. **Introduction:** Introduction to Finite Element Method, Elements and Nodes, Problem modeling using FEM and result checking, discretization and other approximations, responsibility of the user, Elementary matrix algebra.
- 2. Bar and Beams. Linear Static Analysis: Introduction, Stiffness Matrix Formulation: Bar Element, Stiffness Matrix Formulation: Beam element, Properties of k and K. Avoiding Singularity, Mechanical Loads, Thermal Loads, An Application.
- 3. **Plane Problems:** Introduction, Constant Strain Triangle (CST), Linear Strain Triangle (LST), Bilinear Quadrilateral (Q4), Quadratic Quadrilateral (Q8), Improved Bilinear Quadrilateral (Q6), Elements with "Drilling" d.o.f., Elements of More General Shape, Loads, Stress Calculation, Application examples
- 4. **Two-Dimensional Isoparametric Elements and Solution Techniques:** Node Numbering and Matrix Sparsity, Equation Solving, Transformations, Isoperimetric Elements: Formulation,
- 5. **Numerical Integration:** Gauss Quadrature and Isoparametric Elements, Choice of Quadrature Rule. Instabilities, Stress Calculation and Gauss Points, Nature of Finite Element Solution,

Convergence Requirements. Patch Test, Infinite Media and Infinite Elements, Substructures, Symmetry, Constraints, Examples

- 6. **Modeling, Errors, and Accuracy in Linear Analysis:** Modeling in General, Structure Behavior and Element Behavior, Element Tests and Element Shapes, Test Cases and Pilot Studies, Material Properties, Loads, Connections, Boundary Conditions, Planning the Analysis, Numerical Error: Sources and Detection, Common Mistakes, Checking the Model, Critique of FE Results, Stress Concentrations. Sub-modeling, Convergence with Mesh Refinement, Error Measures and Adaptivity
- 7. **Plate and Shells:** Assumption and application of thin and thick plate theories, Finite elements for plates: Kirchhoff and R-M plate elements and related DoF, Finite Element for shells and DoF.
- 8. **Finite Element Idealization of Ship Structures:** Beam element idealization of ships' primary structural members, Hybrid modelling approach of ship structures using bar, beam and shell finite elements.

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

Marine Production and Planning is a theoretical course designed to teach students about detail process and production planning of Marine vessels, shipyard and offshore platforms. In this course students will be acknowledged about the programming concept and network analysis. Thus, they will develop the necessary knowledge and skills for product standardization, scheduling and resource allocation involved in production of marine structures.

OBJECTIVES

- 1. To familiarize with ship production system.
- 2. To able to organize the design, material management in hull and outfit processing.
- 3. To make proficient in resource allocation, cost estimation for standardized production.
- 4. To understand various programming concept, database management and network analysis.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. **Perform** the Production Planning and control.
- 2. Analyze ship production methods, shipyard layout & productivity;
- 3. Apply linear programming, Network analysis and DBMS in shipbuilding
- 4. **Evaluate** production, scheduling and resource allocation;
- 5. **Build** and lead effective production teams and shipbuilding projects;

COURSE CONTENTS

- 1. Overview of ship production system; Shipbuilding Process, Shipyard Layout and Shipyard productivity.
- 2. Production Planning and Control; Introduction, Forecasting, Inventory, MRP, CPM, PERT, etc.
- 3. Design Process, Shipbuilding Process & Methods and Material Management in hull outfit and steel processing.
- 4. Shipbuilding production, scheduling, resource allocation and cost estimation.
- 5. Product standardization, work simplification, work breakdown and integrated zone engineering.
- 6. Linear programming concepts; introduction, requirement, formulations, solutions, etc.
- 7. Network analysis; Critical Path Analysis- introduction, advantage, fundamentals, logical sequencing, scheduling computations, etc.
- 8. Data Base Management System (DBMS) in production planning and control; overview, architecture, data models, schemas, independence, rules, generalization, specialization &normalization, etc.

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

This course is designed to provide knowledge on Ship Vibration which covers the basic ship vibration, types of vibration, mathematical basis of ship vibration, transverse vibration of beams, hydrodynamic inertial coefficients, virtual weights and mounting of engines that are essential for understanding the vibration problems in ship and offshore structures.

OBJECTIVES

- 1. To introduce the students with the types, causes and reduction of ship vibration
- 2. To enable the students proper understanding and interpretation of the results of hull vibration.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. **Explain** the types and causes of ship vibration
- 2. Interpret the consequences of vibration, the limits and predict possibilities of reduction.
- 3. Analyze the frequencies of vibration for different types of ships/ Floating bodies.
- 4. **Apply** analytical and numerical solutions of free and forced global hull-girder vibration for various degree of freedoms

COURSE CONTENTS

- 1. **Introduction and Mathematical basis of Ship vibration:** Definition and types of ship hull vibration, causes of hull vibration, Modes of vibration, Importance of vibration on ships, Mathematical basis of ship vibration, calculation of ship hull vibration, Natural vibration and forced vibration, Resonance and Damping, Natural vibration and forced vibration with damping, Transverse vibration of beams.
- 2. Hydrodynamic Inertia Coefficients and Added Virtual Weight: Calculation of added mass Effects of restricted water on added virtual mass, added mass for hull girder vibration (vertical and horizontal).
- 3. **Natural Frequencies of a Ship's Hull:** Measurement of ship vibration, Two-Node vertical and horizontal frequencies of a ship hull, Higher flexure frequencies, Torsional frequencies of a hull, Empirical formulae for calculating hull frequencies: Schlick formula, Todd formula, Burrill formula, Bunyan formula, Lockwood Taylor formula, Kumai's Formula. Frequencies of higher modes.
- 4. **Hull Response to Exciting Forces:** Allowable limits of vibration in a ship, Calculation of amplitude, Transverse vibration of engines, Sprung masses, Vibration induced in ship structure

due to wave, propeller and machinery, Tensional, flexural and longitudinal vibrations of propeller shafting system.

- **5.** Consequences and Prevention of Ship Vibration: Consequences of vibration in different types of vessels. Reduction of resonant vibration, Reduction of exciting forces, Reduction of existing vibration, Reduction of engine unbalance, Reduction of local vibration, Use of vibration Neutralizers, Elastic mountings, Reduction of vibration by propeller and machinery selection, suppression, isolation and insulation.
- 6. **Single degree of freedom systems:** Free and forced vibrations, clamping, classification and damped systems. Energy methods. Vibration isolation and transmissibility. Vibration measuring instruments such as displacement, velocity, acceleration and frequency measurements, Dunkerley's equation.

PRE-REQUISITE Course Code: NAME 307

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

Optional Theoretical Course based on existing and advanced logistics and technologies of dredger & dredging. This course provides an inventory of the dredging equipment and disposal techniques used in Bangladesh and provide guidance for activities associated with new work and maintenance projects. This course further provides guidance on the evaluation and selection of equipment and evaluation of disposal alternatives.

OBJECTIVES

- 1. To introduce with concepts of different dredging processes and dredging equipment.
- 2. To familiarize with the procedures for planning and the design considerations for meeting the objectives of a dredging project and associated problems.
- 3. To give an overview about dredging prospects of Bangladesh.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. Explain about dredging methods, dredging technologies and dredging equipment;
- 2. Analyze dredging techniques and methods, output and productions;
- 3. Estimate the performance and output of various types of dredging and dredgers;
- 4. Make decisions for use of type of dredging equipment for different type of soil conditions;
- 5. Plan and organize effective dredging teams and dredging projects.

COURSE CONTENTS

1. Introduction to Dredging

- a. Definitions of Dredging, requirements of Dredging, Various purpose of dredging, Dredging requirement areas, Stages of Dredging;
- b. Dredging operation layout, Dredging procedure (Pretreatment, Extraction, and Disposal);
- c. Selection of Dredging Equipment: Criteria/Boundary Conditions, Factors inSelection.

2. Dredger Classification

- a. Mechanical Dredger: application, advantages and limitations, types (Bracket, Grab, Backhoe with description);
- b. General outline of Hydraulic dredger, Suction dredger, Cutter Suction Dredger, Trailing Suction Hopper Dredger, Reclamation Dredger, Barge Unloading Dredger, others (Airlift, Augur suction, pneumatic, amphibious, water injection);
- c. Mechanical vs Hydraulic Dredger

3. Cutter Suction Dredger (CSD)

- a. General Description (Area of application, History, Working Method),
- b. Design (Production Capacity, Dredging Depth, Max/Min Dredging Depth, Width of the cut, type of soil, transport distance, access to site),
- c. Dredging equipment,
- d. The drives,
- e. Spud Systems,
- f. General Layout

4. Trailing Suction Hopper Dredger

- a. General Description (characteristics, application area, history, working method),
- b. The design (Productive capacity, main dimensions, dredge installation, propulsive power, power balance, main layout),
- c. Technical Construction,
- d. Dredging Calculation (estimating discharge-head, effect of dredge material characteristics, pump performance characteristics, estimation of output of various types of dredging. Special features of dredge pump)

5. Type of accessories, pipes and floaters

- a. pipeline fittings, rubber hose, ball socket, etc.
- b. Pump and pipeline characteristics,
- c. Working point, working range,
- d. Operation of a pump and pipeline system.
- e. Environmental aspects of dredging.

6. Brief review of dredging need

a. dredging operation and dredging process for Bangladesh

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

The main purpose of this course for its graduates is to develop the competencies and corresponsive abilities in thinking and applying the major theories and techniques regarding the general science of transports, in area of maritime transport and port management, in order understand the ship/port operations, the harbours' activity and shipyard industry particularities. The main topics of this course as introductory module in maritime problems of study are limited to: maritime transport components, maritime market study and instruments, maritime voyage operations and financing support, contract operations in shipping, merchandise expeditions, fluvial transports, and containerization procedures.

OBJECTIVES

- 1. To enable to get a clear understanding of the Shipping Market.
- 2. To enable to evaluate the economics and pattern of the Maritime Trade.
- 3. To familiarize with the regulatory framework of Maritime Trade.
- 4. To enable to analyze maritime forecasting and market research.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. Analyze the working aspects of different types of economic organization of the shipping market.
- 2. **Evaluate** the different types of special features of shipping market.
- 3. **Predict** the global pattern of maritime trade and freight rate.
- 4. Perform maritime forecasting and market research.
- 5. Make decision regarding ship design to fulfill the demand of ship economics.

COURSE CONTENTS

- 1. The Economic Organization of the Shipping Market
- 2. The Shipping Market Cycle, The Shipping Markets
- 3. Supply, Demand and Freight rates
- 4. Cost, Revenue and Financial Performance, Financing Ships and Shipping Company
- 5. The Economic Principles of Maritime Trade, The global pattern of Maritime Trade
- 6. Bulk cargo and the economics of bulk shipping
- 7. The general cargo and the economics of liner shipping
- 8. The economics of ships and ship designs, The regulatory framework of maritime economics
- 9. The economics of shipbuilding and scrapping, Maritime forecasting and Market research

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

SYNOPSIS/RATIONALE

Power and Propulsion system course is designed to teach students about the concepts of ships propulsors that is different types of Engines, details of components & operation, advances in Diesel engines & Gas Turbine for marine applications, Fuel cells, Nuclear power and Wind power. This course also provides the idea of Ships Shafting system in detail. Students will be able to select the suitable marine engine, shafting system and propeller for the desired ships including necessary calculations. It is expected that students will be able to analyze critically for the selection of correct machinery and propulsion system for the designed ship. Students will also be able to analyze the defects of machinery and ships shafting system while working as Marine engineer on board.

OBJECTIVE

- 1. To introduce and analyze with the working aspects of power and propulsion system of a ship.
- 2. To enable evaluating the type of ship's drive system and their relevant equipment for marine propulsion.
- 3. To enable make decision for suitable types of propellers for different ships.
- 4. To enable the knowledge in ship propulsion and drive system design.

COURSE OUTCOMES (COS)

On successful completion of this course, students should be able to:

- 1. **Describe** the different Power System for ships.
- 2. Evaluate the type of ship's drive system and their relevant equipment for marine propulsion.
- 3. Select suitable types of propellers for different ships.
- 4. **Apply** the knowledge in ship propulsion and drive system design.

COURSE CONTENT

1. Sources of Propulsion Power

- a Air dependent and air independent propulsion
- b. Advances in Diesel Engines for marine applications
- c. Advances in Gas Turbine for marine applications
- d. Fuel cells
- e. Nuclear power and
- f. Wind power.

2. Propulsors

- a Types of different propeller (FPP, CPP, Screw propeller, Paddle wheel etc.)
- b. Comparative studies of different propulsors, Ship power and propulsion systems

- c. Special Propulsive devices, Surface piercing
- d. Contra rotating and other special propellers.

3. Ship Drive System

- a. Straight drive,
- b. Multiple and multistage propulsion drive
- c. Universal drive, Diesel electric drive
- d. Propulsion engine and propeller matching.

4. Ship's Shafting System

- a Description of ship's shafting system
- b. Description and construction of components of shafting system
- c. Shaft alignment methods (rough and precision alignment of shaft).

5. Ship Resistance and Power Calculation

- a Calculate the ship resistance using different method.
- b. Admiralty Coefficient and fuel coefficient
- c. Power Calculation (Total power requirement for a ship)

6. Selection of Propulsor and Propulsion System

- a. Criteria for selecting the suitable propulsor.
- b. Criteria for selecting the suitable propulsion System.
- c. Criteria for selecting the suitable propeller.

7. Application of Marine Diesel Engine, Gas Turbine, Steam Turbine, Nuclear Power Plant.

Course Code: NAME 463 Course Title: Ship Performance Level and Term: Level 4 Term I/II Credit Hours: 3.00 Contact Hours: 3.00

PRE-REQUISITE Course Code: NAME 253

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

Ship Performance course is designed to teach students about the dynamics and performance application in ship design retrospect, namely types of ship and floating structures. Students will be able to perform necessary calculations related to the vessel performance, optimization and efficiency calculations in designing an efficient ship once the course is completed.

OBJECTIVES

- 1. To enable to impart knowledge on vessel performance parameters.
- 2. To achieve ability to familiarize the students with the principle of hull efficiency optimization and performance assessment.
- 3. To enable in being proficient to produce ships' efficiency calculations.
- 4. To enable to conduct experiments and derive parameters.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. **Identify** and **justify** the factors affecting the sea keeping and maneuverability of ships in a seaway.
- 2. **Explain** and **predict** the added resistance applying numerical methods to **investigate** the reasons for the speed and efficiency losses.
- 3. **Illustrates** the effects of hull and propeller roughness on propulsive performance.
- 4. Apply numerical approach to predict propeller performance and optimize the propeller design.

COURSE CONTENTS

- 1. Hull Roughness
 - a. Hull roughness measurement, bottom condition and speed loss, propeller roughness
 - b. Propeller and hull interaction
 - c. Various factors for speed loss
 - d. Methods of predicting resistance increase due to hull and propeller roughness

2. Momentum Analysis of Flow Round Hull

- a. Leading to wave pattern, viscous and induced resistance components
- b. Wave resistance from wave pattern measurements
- c. Methods of wave analysis
- d. Measurement of resistance due to surface shear stress and measurement of pressure drag
- e. Maximizing the propulsive efficiency of ships advances in ship performance
- f. control of the fluid flow around the hull creating resistance, interaction of the hull wake with the propulsor and optimization of the propulsor based on the operational profile of the ship.

- g. On-going advances of the International Towing Tank Conference
- Wake: methods of measurement, detailed wake surveys, mean wake and radial distribution; wake scale effects. Tangential wake components; influence on blade velocity diagram. Influence of tangential wake variations on propeller loading.

3. Propeller Design

- a. Review of theoretical approaches to propeller design including lifting surface approaches, panel methods and blade-element-momentum theories
- b. Blade-element-momentum theory, Goldstein correction factors, flow curvature effects and corrections to section design, optimum radial loading.
- c. Propeller performance at design and the use of computational fluid dynamic based approaches
- d. Wake adapted propellers
- e. Water jet efficiency and design examples using Cavitation Erosion.
- f. Added resistance due to ship motion; wave reflection, wind, yawing and drift; rudder resistance; speed loss of a ship in a seaway.

Course Code: NAME 465 Course Title: Navigation and Maritime Regulations Level and Term: Level 4 Term I/II Credit Hours: 3.00 Contact Hours: 3.00

RATIONALE

Marine Safety and Pollution course is designed to teach students about the maritime regulations, marine safety rules, pollution regulations theory, namely types of ship and floating structures. Students will be able to perform necessary calculations related to the basic design, freeboard, trim and stability calculations using established formulas once the course is completed.

OBJECTIVES

- 1. To provide basic concepts of maritime boundaries, design and operational safety regulations.
- 2. To know about various tidal sequences, zones, pollution regulations in the marine industry.
- 3. To analyze and design various vessels using freeboard and other mandatory regulatory based calculations.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. **Develop** a comprehensive understanding of navigation principles, navigational aids, and tidal theory for safe and efficient maritime operations.
- 2. Application of international maritime regulations to ensure compliance and responsible ship operation.
- 3. **Evaluate and interpret** inland navigation rules and regulations for safe and legal operation within national waters.
- 4. **Assess** and mitigate the impact of marine pollution, considering legal instruments like MARPOL and responsible practices in shipbreaking.

COURSE CONTENTS

1. Outline of Navigation, Navaid and Tide

- a. Outline of navigation
- b. Navigational aids and aids to navigation
- c. Tide and tidal theory

2. International Rules and Freeboard:

- a. International conventions on loadline
- b. Freeboard calculation
- c. International Maritime Organizations (IMO)
- d. law of the seas,
- e. The International Convention for the Prevention of Pollution from Ships (MARPOL)
- f. The International Convention for the Safety of Life at Sea (SOLAS)
- g. International Regulations for Preventing Collisions at Sea (COLREG)

3. Inland Rules

- a. Merchant shipping act
- b. inland shipping ordinance 1976

- c. Marine fishers" ordinance 1983
- d. Inland lifesaving rules 2001

4. Marine Pollution

- a. Pollution and pollutants
- b. MARPOL and legal instrument
- c. Ship breaking in Bangladesh
- d. Green Ship Technology

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

This course introduces the beginning graduate and advanced undergraduate students to finite difference methods as a means of solving different type of differential equations that arise in fluid dynamics. Fundamentals of numerical analysis, ordinary differential equations and partial differential equations related to fluid mechanics and heat transfer will be reviewed. Error control and stability considerations are discussed and demonstrated. The Navier-Stokes equations will be solved using a commercial software.

OBJECTIVES

- 1. To demonstrate knowledge and understanding on flow computations using current best practices for numerical model and method selection and assessment of the quality of results obtained.
- 2. To familiarize the students with the physically justified assumptions to simplify and carry out feasible analysis of real-life fluid flow and heat transfer problems.
- 3. To induce the ability among students to use powerful computational tools to analyze fluid dynamics and heat transfer related problems.
- 4. To be able to illustrate the methods to investigate multiphase flow phenomenon and find out the limitations and uncertainties involved with CFD applications

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. **Comprehend** different flow computations using current best practices for numerical model and method selection and assessment of the quality of results obtained.
- 2. **Make** physically justified assumptions to simplify and carry out feasible analysis of real-life fluid flow and heat transfer problems.
- 3. Use powerful computational tools to analyze fluid dynamics and heat transfer related problems.
- 4. **Illustrate** the methods to investigate multiphase flow phenomenon and find out the limitations and uncertainties involved with CFD applications.

COURSE CONTENT

- 1. <u>Introduction</u>: Finite Difference Method, Finite Volume Method, Finite Element Method, Boundary Element Method etc.
- 2. <u>Governing equations of fluid flow:</u> Finite Control Volume, Substantial Derivative, Physical meaning of gradient of velocity, Conservation and non-conservation form of continuity

equation, Conservation and non-conservation form of Navier-Stokes equation, Energy equation.

- Finite Volume Method: Diffusion problem, Convection Diffusion problem, Discretization Schemes, Pressure – Velocity coupling, Solution of Discretized Equations, Unsteady flows, Implementation of Boundary Conditions, Errors and Uncertainty in CFD modeling.
- 4. <u>**Turbulence modeling:**</u> Characteristics of turbulent flow, Transition from laminar to turbulent flow, Reynolds Averaged Navier Stokes Equation (RANS), Turbulence Models, i.e., k-epsilon model, k-omega model, Spalart Almaras model, LES, DES, DNS etc.
- 5. <u>Grid generation</u>: Body-fitted coordinate grids for complex geometries, Cartesian vs curvilinear grids, Block-structured grids, Unstructured grids, Discretization in unstructured grids, Staggered vs co-located grid arrangements.
- 6. <u>Free surface flow:</u> free surface computation with linear and fully nonlinear boundary conditions, Numerical treatment of fluid-body interface, Integration of Volume of Fluid (VOF) method to Reynolds Averaged Navier Stokes Equation (RANS).
- 7. <u>Errors and Uncertainty in CFD modelling:</u> Errors and Uncertainty in CFD, Numerical Errors, Input Uncertainty, Physical Model Uncertainty, Verification and Validation.

PRE-REQUISITE

Course Code: NAME 201 **Course Title:** Mechanics of Structure

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

This optional theoretical course will provide students a fundamental concept of modern composite materials which are being used in an ever-increasing range of applications and industries. Basic knowledge of composite materials will allow students to understand the issues associated with using these materials, as well as gain insight into how their usage differs from conventional materials such as metals, and ultimately be able to use composites to their fullest potential. At the end of the course students will develop critical thinking &skills needed for the design, manufacture and analysis of composite materials from a material scientist's viewpoint.

OBJECTIVES

- 1. To impart knowledge on characteristics, classifications and applications of composite materials.
- 2. To achieve ability to differentiate of micro-mechanics and macro-mechanics of composite materials.
- 3. To understand the composite structural analysis.
- 4. To calculate the laminate stress-strain, buckling, bending, deflection etc.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. **Explain** the types of composite materials and their characteristic features.
- 2. **Perform** calculation the elastic and strength properties of unidirectional laminates using micromechanics and macro-mechanics theory.
- 3. Analyze the most appropriate manufacturing process for fabricating composite materials.
- 4. **Evaluate** the fracture, fatigue, impact performance and structural health monitoring of composite materials.

COURSE CONTENTS

- 1. Introduction to composite materials
 - a. Basic concepts, characteristics, advantages and drawbacks of composites over monolithic materials
 - b. Classifications, common types of fibers and matrices, mechanical properties
 - c. Applications of composite material
 - d. Manufacturing methods and processes

2. Macro mechanics analysis of lamina

- a. Review of definitions of stress, strain, elastic moduli
- b. Strain energy stress-strain relationships for different types of materials

- c. Stress-strain relationships for a unidirectional/bidirectional lamina
- d. The engineering constants of a unidirectional/bidirectional lamina in terms of the stiffness and compliance.

3. Elastic properties of the unidirectional lamina

- a. Engineering constants, Stress-strain relationship of a thin lamina
- b. Transformation of stress and strain and elastic constants
- c. typical elastic properties of a unidirectional lamina
- d. Relationship of Compliance and Stiffness Matrix
- e. Hooke's Law for a Two-Dimensional Angle Lamina.

4. Micromechanical analysis of a lamina

- a. Assumptions and limitations, Longitudinal strength and stiffness
- b. In-plane shear modulus and Poisson's ratio
- c. Concepts of volume and weight fraction of fiber and matrix, density and void fraction in composites
- d. Four elastic moduli, two coefficients of thermal expansion and two coefficients of moisture expansion of a unidirectional.

5. Analysis of laminated composites

- a. Basic assumptions, Strain-displacement relationship
- b. Laminate stiffness, Laminate strength, determination of lamina stress and strain
- c. Types of laminate configuration, Layered laminate
- d. In-plane stiffness of symmetric laminates
- e. Flexural stiffness of symmetric sandwich laminates
- f. Behavior of general laminates.

PRE-REQUISITE

Course Code: EECE 281 **Course Title:** Marine Electrical and Electronics

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

This course is designed to provide theoretical as well as conceptual understanding on control systems with especial attention to on-board machinery and systems for marine environment. Obviously, it will help the naval architecture and marine engineering graduates to perform the duties properly during installations and operations of marine equipment and systems at shipyard, dockyard and fleet with certain level of confidence.

OBJECTIVES

- 1. To introduce the students with the basic concepts of control system functions and design.
- 2. To enable the students in implementing and testing dynamic system models
- 3. To enable the students to interpret dynamic system models with sufficient mathematical reasoning.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. **Explain** the control engineering principles for dynamic system models.
- 2. **Apply** the concepts of control engineering to solve control system problems for common industrial applications.
- 3. Select appropriate dynamic control models using various analytical and graphical techniques..
- 4. **Design** control systems using using computer software tools..

COURSE CONTENTS

1. Introduction to theory of controls

- a. Concepts of mechanical, hydraulic, pneumatic, thermal and electro-mechanical controls
- b. Different modes and methods of control systems and their representation by different equations
- c. Laplace transforms, transfer functions and characteristic functions,
- d. Stability, Routh's criterion for stability.

2. Block diagrams and signal flow graphs

- a. Physical systems modelling
- b. Root locus analysis
- c. Time domain and frequency domain analysis of control systems.

3. Useful problem and solution of a simple level control

a. Flow control, pressure control and temperature control of a physical system.

4. Computer solution of system equations

- a. System response, control action and system types
- b. System compensation, analogues of control system
- c. application of servomechanisms on-board systems for steering, stabilizer etc.
- d. Introduction to digital computerized control and simple control development using software.

Course Code:NAME 363 **Course Title:** Numerical Methods

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

This optional theoretical course will introduce the students to the basic fundamentals of optimization methods that can be used during a design process. Considering the computational aspect of the subject especially in higher dimensions, the course will involve significant amount of computational assignments and a term project in the general area of engineering optimization. At the end of the course students will develop critical thinking and learn to frame engineering minima maxima problems in the framework of optimization problems.

OBJECTIVES

- 1. To enable the students to enumerate the fundamental knowledge of Linear Programming and Dynamic Programming problems.
- 2. To enable the students to learn classical optimization techniques and numerical methods of optimization.
- 3. To enable the students to know the basics of different evolutionary algorithms.
- 4. To enable the students to explain Integer programming techniques and apply different optimization techniques to solve various models arising from engineering areas.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. **Explain** the fundamental knowledge of Linear Programming and Dynamic Programming problems.
- 2. **Describe** the basics of different evolutionary algorithms.
- 3. **Apply** the theoretical concepts and knowledge of optimization method in analysis, design, and development of ship design.
- 4. **Enumerate** fundamentals of Integer programming technique and apply different techniques to solve various optimization problems arising from various engineering problem as well as ship design.

COURSE CONTENTS

- 1. **Introduction to linear programming:** construction of the LP model, graphical LP solution, slack, surplus and unrestricted variables.
- 2. **The simplex method:** standard LP form, the simplex algorithm, the M-method, the two-phase method, special cases in simplex method application.
- 3. **Duality and sensitivity analysis:** Definition of the dual problem, relationship between the optimal primal and dual solutions, dual simplex method, Integer linear programming: B & B

algorithm, cutting plane algorithm.

- 4. **Nonlinear Programming:** unconstrained problem, constrained problem: Jacobian method, Lagrangean method, Kuhn-Tucker conditions.
- 5. **Numerical techniques for unconstrained optimization:** The Newton-Raphson method, direct search method, steepest ascent method.
- 6. **Numerical techniques for constrained optimization:** sequential linear programming (SLP), sequential quadratic programming (SQP), sequential unconstrained minimization techniques (SUMT)
- 7. **Modern methods of optimization:** Genetic algorithm, simulated annealing, particle swarm optimization, ant colony optimization.
- 8. **Project scheduling:** project development, critical path method, optimum scheduling by critical path method.

Course Code: NAME 483 **Course Title:** Theory of Hydrofoils **Level and Term:** Level 4 Term I/II Credit Hours: 3.00 Contact Hours: 3.00

PRE-REQUISITE

Course Code: NAME 353 **Course Title:** Ship Resistance and Propulsion

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

Theory of Hydrofoils course is designed to teach students hydrofoil shapes and enrich their pertinent knowledge. Students will be able to perform necessary calculations related to hydrofoils which will improve the vessel performance, optimization and efficiency calculations once the course is completed. It is expected that students will develop critical thinking about how to contrast & justify speed affecting factor, categorize & relate reasons of speed thus solves efficiency related error calculation.

OBJECTIVES

- 1. To impart knowledge on hydrofoils.
- 2. To familiarize the students with the theory of hydrofoils that enhance the hull efficiency, optimization and performance.
- 3. To make proficient to produce ships' efficiency calculations.
- 4. To enable to conduct experiments and derive parameters.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. **Contrast** and **justify** the factors affecting the speed and efficiencies of ships.
- 2. Categorize and Relate reasons for the speed and efficiency due to hydrofoils.
- 3. **Illustrates** the effects of hydrofoils on propulsive performance.
- 4. **Display** and **Solve** efficiency related error calculations.

COURSE CONTENTS

- 1. Definition and geometry of hydrofoils.
- 2. Introduction to the fundamentals of lifting surfaces related to the selection, design, experimental and numerical modelling, as well as optimization of hydrofoils, propellers, and turbines.
- 3. Analytic investigation of flow past a hydrofoil
- 4. Theory of thin hydrofoils.
- 5. Theory of hydrofoils having arbitrary shapes.
- 6. 2-D and 3-D hydrofoils
- 7. Design and analysis of hydrofoil sections
- 8. Cavitating hydrofoils
- 9. Application of hydrofoils to high-speed craft, control surface and propeller.

None

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

The aim of this optional theoretical course is to provide the students with the complete and up-to-date overview of offshore structure. This course will enable students to gain knowledge of different types of offshore structures, their design characteristics, environmental loads on them, station keeping etc. This course also deals with the suitability of particular type of offshore platforms in Bangladesh.

OBJECTIVES

- 1. To enable students to identify different types of offshore structures and their characteristics.
- 2. To be able to estimate environmental (wind, wave and current) loads on both fixed and floating type of offshore structures.
- 3. To be able to design mooring system for floating offshore structures.
- 4. To select a particular type of offshore structure suitable for offshore areas of Bangladesh.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. To **comprehend** and **distinguish** design characteristics of different types of offshore structures.
- 2. To be able to **compute** environmental loads on offshore structures.
- 3. To **design** mooring system for floating offshore structures.
- 4. To **appraise** safety features of offshore structures.

COURSE CONTENTS

- 1. **Introduction**: Challenges in offshore environment, Types of offshore structures, Typical motion characteristics of offshore structures, important seakeeping and wave load problems.
- 2. **Types of offshore structures** Fixed offshore structures: jacket, jackup, TLP and gravity platforms, Floating offshore platforms: Semi-submersible, drill ships
- 3. Loads on offshore structure Types of loads on offshore structures, Hydrodynamic classification of structures.
- 4. **Wave loads on offshore structures** Wave theories and their uses, Assumption of linear (Airy) Wave theory, Difference between linear and non-linear wave theory, Wave particle orbit and velocity, Horizontal velocity and pressure distribution in linear and non-linear wave theory, Time domain vs. frequency domain, wave spectrum: P-M, JONSWAP spectrum, Creation of an irregular wave from a wave spectrum, Assumption of potential flow, dynamic pressure, Wave breaking, Wave excitation loads: Froude-Kriloff and diffraction forces and moments. Added mass, damping and restoring terms, Morison 's equation and its application for Wave Load problems.

- 5. **Wind and Current loads on Offshore Structures** Wind speed profiles, Turbulence, Wind spectra, Wind pressure, Effect of current, Types of Current, Current velocity sunniest profile
- 6. **Design of Fixed offshore Structures** Introduction to fixed offshore structures: Sizing & layout, Design of Jacket Structures, Base shear, Over-turning moment and buckling in Jacket structures, Design of TLP structures: Tension in tethers, restoring forces, Design of spar platforms.
- 7. **Design of Floating Offshore Structures** General Arrangement and sizing of a semisubmersible platform, Hydrodynamic features of floating offshore platforms, Stability requirement of floating offshore platforms, Problem solving, General Arrangement and design characteristics of a drill ship, Hydrodynamic features of a drillship.
- 8. **Fatigue of offshore structures** Basic concepts, fatigue in offshore structures, Fatigue damage assessment, Effect of salinity and temperature on fatigue, S-N Curves.
- 9. **Buoy and Mooring system of Offshore Structures** Station keeping: mooring, thruster forces and dynamic positioning, Assumption and derivation of catenary mooring equation, Problem solving on minimum length of a catenary mooring.
- 10. **Safety of Offshore Structures** Life cycle phases of an offshore structure, causes of structural failures and risk reduction measures, Accidental experiences and lesson learned.
- 11. Offshore Structures for Bangladesh Suitability of Offshore Structures for Bangladesh.

Course Code: NAME 499 Course Title: Shipyard Management Level and Term: Level 4, Term I/II Credit Hours: 3.00 Contact Hours: 3.00

PRE-REQUISITE

Course Code: GELM 275 **Course Title:** Leadership and Management

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

Optional theoretical course designed to teach students about the organizational structures of shipyards, management of a shipyard's workforce and performance evaluation of employees. After taking this course, students will acquire knowledge of various shipbuilding process and activities such as tendering, estimation, engineering, procurement, construction and timely delivery. Finally, students shall be able to make decisions to select alternative design, production process or equipment to increase shipyard productivity and to reduce risk.

OBJECTIVES

- 1. To be familiar with the management of various shops and plants at shipyard.
- 2. To gain knowledge of shipbuilding process at various stages.
- 3. To be able to plan and manage shipyard's daily activities.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. **Apply** knowledge of engineering fundamentals to comprehend various processes of shipbuilding at different stages.
- 2. **Conduct** investigations on design and process alternatives for selection of appropriate ones using research-based knowledge and research methods including analysis and interpretation of data, and synthesis of information to provide valid conclusions.
- 3. **Create**, **select**, and **apply** appropriate techniques and resources on shipbuilding processes, with an understanding of the limitations to maximize results.

COURSE CONTENTS

- 1. Shipbuilding: Phase-wise work contents, initial estimation procedures and practice, information flow, agreements.
- 2. Handling of material and material flow: Plant location, layout and construction, plant safety, Designer's roles, owner's requirements, builder's profit and society's rules.
- 3. Material and technological constraints: Alternative designs and acceptance of a compromise design, post-production assessment for future guidance.
- 4. Cost evaluation in shipyard
- 5. Work flow of ship construction
- 6. Material procurement and handling
- 7. Overhead parameters in shipyard
- 8. Protection against fire and physical accidents
- 9. Docking & undocking precautions

- 10. Workers job environment and safety instructions
- 11. Precautions for entering in confined corporation
- 12. Gas freeness certificate

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

Computer Programming course is designed to teach students about the basic programming theory in software and programming, namely types of ship and floating structures. Students will be able to perform necessary calculations related to the basic design, trim and stability calculations using computer programming once the course is completed.

OBJECTIVES

- 1. To provide basic concepts of compilers, interpreters and IDE
- 2. To know about various syntax, semantics of programming languages.
- 3. To analyze and design various applications using different library functions of programming language.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. **Describe** the concept of programming language and **Identify** syntax, semantics of programming language.
- 2. **Construct** a computer programming pseudocode and **Apply** pseudocode in a computer program.
- 3. Explain a programming architecture and Justify program design and development.
- 4. Assist for testing and debugging tools to discover errors.

COURSE CONTENTS

- 1. **Introduction to Programming and OOP:** Programing basics, Programming concepts, Programming and coding; Algorithm, Philosophy of Object-Oriented Programming (OOP); Advantages of OOP over structured programming; Program development stages; Encapsulation, classes and objects, access specifiers, static and non-static members; Constructors, destructors and copy constructors; Array of objects, object pointers, and object references; Compilers, interpreters and IDE; Syntax and semantics; Flow charts.
- 2. **Inheritance and Polymorphism:** Single and multiple inheritance; overloading, abstract classes, virtual functions and overriding; Exceptions; Object Oriented I/O; Template functions and classes; Multi-threaded Programming.
- 3. Structured Programming Language: Data types, operators, expressions, control structures.
- 4. **Functions and Program Structure:** Parameter passing conventions, scope rules and storage classes, recursion; Header files; Preprocessor; Pointers and arrays; Strings; Multidimensional

array; User defined data types: structures, unions, enumerations; Input and Output: standard input and output, formatted input and output, file access; Variable length argument list; Command line parameters; Error Handling; Exception Handling, Graphics; Linking; Library functions, Type casting.

- 5. **Memory Allocation:** Static and Dynamic; Recursive Functions.
- 6. Introduction to Data Structure: Stack, Queue; File I/O; Graphics

COURSE SCHEDULE

Week	Contents	Assessment
Week 1	Introduction	
Class 1	Programming Concepts, IDE and Compiler	
Class 2	Structured Programming	
Class 3	Object-oriented programming	
Week 2	Numbering System and Memory Allocation	
Class 4	Concept of Number System and Memory Allocation	~ .
Class 5	Binary, Octal and Decimal Number System	CT 1,
Class 6	Memory allocation in programming	Final Exam
Week 3	Introduction to Data Types, Variables and Statement	
Class 7	Concept of Header file types, Data types and Keywords	
Class 8	Concept of Variables, Constant and their declarations	
Class 9	Concept of Statement and Expression	
Week 4	Operators and Basic Library functions	
Class 10	Operators and their types	
Class 11	Basic library functions	
Class 12	Assessment 01	
Week 5	Flowchart and Algorithm	CT 2,
Class 13	Introduction to Pseudocode, Algorithm and Flow chart	Final Exam
Class 14	Concept of Structure: Sequence, Decision and Repetition	
Class 15	Case wise Structure	
Week 6	Conditionals Segment 1	
Class 16	Concepts of Conditionals, Expression for conditionals and their types.	
Class 17	The If else conditional	
Class 18	The do-while and while conditional	
Week 7	Conditionals Segment 2	
Class 19	Switch Case conditional]
Class 20	Loop and Nested loop conditionals	_
Class 21	Operators and Functions in Conditional	Mid Term,
Week 8	Loop and Nested Loop	Final Exam

Class 22	Detailed concepts and control structures of Loop and Nested loop	
Class 23	Assessment 02	
Class 24	Application of Loop and Nested Loop	
Week 9	Function	
Class 25	Concepts of Function and function types	
Class 26	Function process, parameter passing and creation	
Class 27	Advance recursivity in function	
Week 10	Function and loop Combination	
Class 28	Concept of Class and Object	
Class 29	Allocation and creation of loop and function in program	
Class 30	Application of loop and function in class and object	
Week 11	Array and pointer	
Class 31	Concept of Array, Pointer and String	Mid Term,
Class 32	Concept of Multidomain array and pointer	Final Exam
Class 33	Dynamic memory allocation	
Week 12	Introduction to File System	
Class 34	Concept of File input output, user definition and preprocessor	
Class 35	User defined data type, union and enumeration	
Class 36	Assessment 03	
Week 13	Error Handling	
Class 37	Concept of Bitwise operations and linking	
Class 38	Concept of Stack and Que	
Class 39	Concept on Error handling	CT 3,

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

Computer Programming Lab course is designed to teach students about the basic programming application is ship design retrospect, namely types of ship and floating structures. Students will be able to perform necessary calculations related to the basic design, trim and stability calculations using computer programming once the course is completed. It is expected that students can develop critical thinking behind developing a computer program and able to check their calculations.

OBJECTIVES

- 1. To enable students to be familiarized and implement different programming concepts in application.
- 2. To familiarize the students with applied and calculative concept of computer programming
- 3. To enable students to compute different parameters of ships using programming concept.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. Solve programming problems and **Perform** computations with the aid of computer **develop** lines plan of ship.
- 2. Apply computer tools in problem solving and assignments.
- 3. Analyze and Contrast ideas to solve complicated problems.

COURSE CONTENTS

1. Introduction, Structured programming language

- a. Introduction to C and C++Programming Language
- b. Data types, Variable declaration, Program Statements, Operators, Expressions
- c. Problem solving approaches, Basic Input / Output
- d. Control Structure: if else, switch case
- e. Control Structures: loop (different types), nested Loop
- f. Array and its uses, Array Operations, 2D Array
- g. Strings, Function, Recursion, Pointer, File Access, Object

2. Oriented Programming:

- a. Introduction to C++ (Object Oriented)
- b. Class & Object
- c. Application of the programming language in solving ship related problems.

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

Compulsory theoretical course based on application of electrical and electronic technology in marine field.

OBJECTIVES

- 1. To be familiarized with electrical technology, able to investigate and analyze electrical circuits and get introduced with power generation and distribution system, relevant SOLAS regulation applicable for ship and marine establishments.
- 2. To develop a basic foundation on electrical machines with a special focus on operating principle, identification of parts and accessories, constructional features, types, characteristics features, efficiency and loss measurement, application and maintenance etc.
- 3. To have a basic understanding on electronic components and its applications in marine electronics
- 4. To develop a broad idea on navigational aid equipment such as Radar, Gyro compass, echo sounder, speed log etc.

COURSE OUTCOMES (COs)

On successful completion of this course, students should:

- 1. **Be able to describe** basic theories of electric circuits, analyze electrical circuits and its application in electrical equipment, identify power generation and distribution system with relevant SOLAS regulation applicable for ship and marine establishments.
- 2. **Be capable to describe** basic theories of electrical machines and explain principle of operation, constructional features and **evaluate** the characteristics and find out their efficiency and losses, applications and maintenance etc.
- 3. **Be able to explain** theories of electronic components and identify its applications in marine electronics sector.
- 4. **Be capable to explain** the principles of navigational aid equipment such as Radar, Gyro compass, echo sounder, speed log, GPS etc. and communication equipment used on board ships.

COURSE CONTENTS

- 1. **DC and AC circuit analysis:** Kirchhoff's law, Thevenin theorem, Norton theorem, Node Pair voltage theorem etc.
- 2. **Three phase induction motors:** Basic Theory, Principle of operation, Types, construction, Equivalent circuit, Starting, speed control, Maintenance, applications.

- 3. **Single phase induction motors:** Basic Theory, Principle of operation, Equivalent circuit, types, starting, Maintenance, applications.
- 4. **AC generators:** Basic Theory, Principle of operation, Construction, excitation system, generator on load, voltage regulation, synchronization, Maintenance and applications.
- 5. **Synchronous motor:** Principle of operation, starting, application, maintenance Steering system.
- 6. Electronic Diodes, BJTs, diode and BJT circuits, IC, MOSFET and SCR as power switching devices.
- 7. Controlled rectifiers and inverters.
- 8. **Radar and wireless equipment:** Principle, block diagram, different parameters, Maintenance. Navigational and Electronic navigational aids (GPS, Gyro compass. Echo sounder, speed log, LORAN, RDF and Decca Chain).
- 9. Power generation and distribution (PGT) system onboard ship

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

To help the students to explore various DC and AC machines and to teach about the concepts, principles and working of basic electronic devices and circuits by hand-held experiments. Our mission is to expose students to the constructions of electrical machines and basic electronic circuit to analyze their performance. This course is targeted to verify the properties of generator, motor, diode, BJT, MOSFET and relate them with their theoretical knowledge.

OBJECTIVES

- 1. To familiarize the students with the basic electrical machines like transformer, dc generator, dc motor, synchronous machines, induction machines etc.
- 2. To calculate various parameters of machines like voltage regulation, efficiency etc., observe their behavior under various load conditions and compare them.
- 3. To enable the students to be familiarized and implement different semiconductor diode circuits (e.g. rectifier, regulator), their output characteristics and their practical implication in real life.
- 4. To familiarize the students with input and output characteristics of different BJTs, FETs and also the operation of each device in terms of junction bias voltage and charge carrier movement.

COURSE OUTCOMES (COs)

On successful completion of this course, students should:

- 1. **Be able to compute** the voltage regulation and efficiency of electrical machine, like transformer, alternator, induction motor etc. and **justify** these characteristics under various loading condition.
- 2. **Be able to compare** the starting and operating characteristics of various induction machines like squirrel cage induction motor, wound rotor induction motor, capacitor start & run motor.
- 3. **Developing capability to compare** the input and output characteristics of different electronic component obtained by both simulations and hand-held experiments.
- 4. **Becoming proficient in interpreting** the behavior of FET with different configurations and design electronic circuits adapting to the specified requirements using both simulating tools and hardware.
- 5. **Developing collaborative nature by discussing** and **performing** as a group and **organize** project tasks maintaining solidarity during the group projects and presentations

COURSE CONTENT

- 1. Computing the regulation of the Transformer in Various Loads.
- 2. Study the properties of Three-Phase Alternator in various loads
- 3. Study the properties of Three Phase Induction motor.

- 4. Study the properties of Capacitor-Start & Run Motor.
- 5. Study the properties of synchronous motor.
- 6. Study the characteristics of diode.
- 7. Study of diode rectifier circuits.
- 8. Study of the characteristics of SCR.
- 9. Study of common base bipolar junction transistor characteristics.

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

The aim of this course is to provide the concept of designing and drawing accurate schematics for simple blocks, orthographic, auxiliary drawing, sectional drawing and isometric representations, dimensioning, etc., which will be helpful during project, work in later semesters, as well as professionally.

OBJECTIVES

- 1. To introduce the principles and perspectives of geometric drawing that includes the standardization, drafting, dimensions and etc.
- 2. To introduce the technique of engineering graphics as a basis of engineering communication and expression of idea and thought.
- 3. To familiarize with the proper and standard technique in lettering, basic geometric constructions, sketching, dimensioning methods to describe size, shape and position accurately on an engineering drawing.
- 4. To introduce orthographic projection auxiliary, sectional views, and apply 3D pictorials to choose the best view to present the drawings.
- 5. To expose final drawings during the design process including assembly, machine and working drawings.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. **Demonstrate** use of appropriate standards and conventions in drawing sheet preparation and layout.
- 2. **Apply** the correct methods of referencing relevant specifications and dimensioning for the interpretation of Mechanical engineering drawings.
- 3. **Perform** the correct conventions and techniques in drawing orthographic, sectional and auxiliary views.
- 4. **Produce** isometric and oblique pictorial form from third angle orthogonal drawings.

COURSE CONTENTS

- 1. Introduction, Familiarization with drawing tools and types of projections.
- 2. Hands on skill on object drawing.
- 3. Drawing orthographic views of simple blocks, drawing orthographic views of objects with round features, drawing orthographic views of objects with fillets, rounds.
- 4. Drawing sectional views and Drawing auxiliary views.

5. Drawing isometric views of simple blocks, drawing isometric views with circle, drawing isometric views with missing lines, drawing isometric views.

PRE-REQUISITE None

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

Foundry, Welding and Machine Shop Sessional course is designed to provide students with the theoretical and practical skills needed to develop their future professional activity in the areas of foundry and/or welding, on production management, casting design and product control, areas of safety, speed and feed calculations, layout equipment, cutting tools, and machine tool equipment. Attention is given to the methodologies of casting design, as well as to the techniques of identification, characterization and resolution of product defects. Also introduces and studies the more technical shop operations of threading, tapping, boring, carbide tooling, and principles of metal cutting. Principles of metal cutting include the machining ability of metals and how it relates to chip formation.

OBJECTIVES

- 1. To provide students with the theoretical and practical skills needed to develop their future professional activity in the areas of foundry, on production management
- 2. To select appropriate welding methods and electrodes based on material properties and joint requirements.
- 3. To apply various welding techniques on different materials (steel, aluminum) and identify and rectify common welding defects using visual and non-destructive testing methods
- 4. To enable to recognize the characteristics of surface grinder types, grinding wheels and abrasive products, mount a grinding wheel, true and dress a grinding wheel, drilling machine, lathe machine, shaper machine, milling machine wheel required to manufacture a product from raw materials.
- 5. To enable to acknowledge the safety precautions associated with various workshop activities and employ appropriate safety measures.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. **Perform** foundational foundry operations including pattern making, molding, core making, and metal melting/casting and achieving desired casting quality.
- 2. **Explain** the fundamental aspects of welding processes, including heat generation, metal properties, electrode selection, and joint design.
- 3. **Apply** various electric arc and gas welding techniques on different materials (steel, aluminum) while identifying and mitigating potential defects.
- 4. **Identify** the characteristics and **demonstrate** proficient use of common bench, hand, measuring, and cutting tools, and operate basic machine tools (drilling, lathe, shaper, milling, grinding) for machining tasks.

5. **Identify** and **assess** potential hazards associated with various tools, processes, and materials, implementing control measures to mitigate risks.

COURSE CONTENTS

1. Foundry

- a. Introduction to foundry, tools and equipment;
- b. Patterns: function, pattern making;
- c. Molding: molding materials sand preparation, types of mold, procedure;
- d. Cores: types, core making materials;
- e. Metal melting and casting; Inspection of casting and casting defects.

2. Welding

- a. Metal joints: riveting, grooving, soldering, welding;
- b. Welding practice: electric arc steel, aluminum; Types of electrode;
- c. Welding defects: visual, destructive and non-destructive tests of welding.
- d. Gas welding and equipment; Types of flame; Welding of different types of materials;
- e. Gas welding defects; Test of gas welding.

3. Tools

- a. Common bench and hand tools, marking and layout tools;
- b. Measuring tools, cutting tools, machine tools, Bench work on jobs;
- c. Practices on machine tools: drilling machine, lathe machine, shaper machine, milling machine, grinding machine.

PRE-REQUISITE

Course Code: NAME 177 Course Title: Thermal Engineering

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

Compulsory Theoretical course based on heat related equipment design and problem to solve effectively and efficiently.

OBJECTIVES

- 1. To be able to compare why certain materials are better than others for transferring heat.
- 2. To apply real-world problems regarding heat transfer and materials.
- 3. To apply heat transfer principles to design and to evaluate performance of thermal systems.
- 4. To develop the design of heat exchangers.
- 5. To evaluate the impacts of initial and boundary conditions on the solutions of a particular heat transfer problem.
- 6. To evaluate the relative contributions of different modes of heat transfer.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. **Apply** fundamental heat transfer principles in various engineering contexts.
- 2. Utilize mathematical model to predict heat transfer behavior in steady-state and transient conditions.
- 3. Select and design appropriate heat transfer solutions for specific engineering applications, considering different factors.
- 4. **Apply** heat transfer knowledge to design efficient and sustainable thermal management solutions for shipboard systems

COURSE CONTENTS

- 1. **Introduction to Heat Transfer:** Conduction Heat Transfer, Thermal Conductivity, Convection Heat Transfer, Radiation Heat Transfer.
- 2. **Steady-State Conduction—One Dimension:** The Plane Wall Insulation and R Values, Radial Systems, Heat-Transfer Coefficient, Critical Thickness of Insulation, Heat-Source Systems, Cylinder with Heat Sources, Conduction-Convection Systems, Fins, Thermal Contact Resistance.
- 3. **Steady-State Conduction—Multiple Dimensions:** Mathematical Analysis of Two-Dimensional, Heat Conduction, Graphical Analysis, The Conduction Shape Factor, Numerical Method of Analysis, Numerical Formulation in Terms of Resistance

Elements, Gauss-Seidel Iteration, Accuracy Considerations, Electrical Analogy for Two-Dimensional Conduction.

- 5. **Unsteady-State Conduction:** Lumped-Heat-Capacity System, Transient Heat Flow in a Semi- Infinite Solid, Convection Boundary Conditions, Multidimensional Systems, Transient Numerical Method, Thermal Resistance and Capacity Formulation.
- 6. **Principles of Convection:** Introduction, Viscous Flow, Inviscid Flow, Laminar Boundary Layer on a Flat Plate, Energy Equation of the Boundary Layer, The Thermal Boundary Layer, The Relation Between Fluid Friction and Heat Transfer, Turbulent-Boundary-Layer Heat Transfer, Turbulent-Boundary-Layer Thickness, Heat Transfer in Laminar Tube Flow, Turbulent Flow in a Tube, Heat Transfer in High-Speed Flow.
- 7. **Empirical and Practical Relations for Forced-Convection Heat Transfer:** Introduction, Empirical Relations for Pipe and Tube Flow, Flow Across Cylinders and Spheres, Flow Across Tube Banks, Liquid-Metal Heat Transfer.
- 8. **Natural Convection Systems:** Free-Convection Heat Transfer on a Vertical Flat Plate, Empirical Relations for Free Convection, Free Convection from Vertical Planes and Cylinders, Free Convection from Horizontal Cylinders, Free Convection from Horizontal Plates, Free Convection from Inclined Surfaces, Non-Newtonian Fluids, Simplified Equations for Air, Free Convection from Spheres, Free Convection in Enclosed Spaces, Combined Free and Forced Convection.
- 9. Radiation Heat Transfer: Physical Mechanism, Radiation Properties, Radiation Shape Factor, Relations Between Shape Factors, Heat Exchange Between Non-black bodies, Infinite Parallel Surfaces, Radiation Shields, Gas Radiation, Radiation Network for an Absorbing and Transmitting Medium, Radiation Exchange with Specular Surfaces, Radiation Exchange with Transmitting, Reflecting, and Absorbing Media, Formulation for Numerical Solution, Solar Radiation, Radiation Properties of the Environment, Effect of Radiation on Temperature Measurement, The Radiation Heat-Transfer Coefficient.
- Condensation and Boiling Heat Transfer: Introduction, Condensation Heat-Transfer Phenomena, The Condensation Number, Film Condensation Inside Horizontal Tubes, Boiling Heat Transfer, Simplified Relations for Boiling Heat Transfer with Water, The Heat Pipe.
- 11. **Heat Exchangers:** Introduction, The Overall Heat-Transfer Coefficient, Fouling Factors, Types of Heat Exchangers, The Log Mean Temperature Difference, Effectiveness-NTU Method, Compact Heat Exchangers, Analysis for Variable Properties, Heat-Exchanger Design Considerations.
- 12. **Heat transfer cases in ship design:** Insulation in bulkheads, refrigerated spaces, fish holds in trawlers.

Outcome Based Education (OBE)

RATIONALE

This course enables students to apply the understanding of heat transfer mechanisms such as conduction, convection and radiation for understanding the performance of various heat transfer equipment such as heat exchangers, condensers, boilers, evaporators etc. used in almost all industries.

OBJECTIVES

- 1. To provide an introduction to heat and mass transfer and introduces practical applications in industry.
- 2. To introduce basic tools to design process operations involving heat transfer and mass transfer are covered.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. **Apply** principles of heat and mass transfer to basic engineering systems.
- 2. Analyze heat transfer by conduction, convection and radiation.
- 3. **Explain** analytical and numerical methods commonly used to analyze two- dimensional, steady state heat conduction.
- 4. **Analyze** and calculate heat and mass transfer in complex systems involving several heat transfer mechanisms.

COURSE CONTENTS

- 1. Forced convection heat transfer in a circular tube.
- 2. Forced convection over a flat plate.
- 3. Study of heat exchanger
- 4. Study of forced convection of fin/flat plate/pipe bundle
- 5. Study of free convection of fin/flat plate/pipe bundle.
- 6. Determination of thermal conductivity of a metal by steady state method
- 7. Study of thermal radiation unit:
 - a. Inverse square law for light radiation.
 - b. Lamberts cosine law for light
 - c. Lamberts law of absorption for light.
- 8. Study of heat transfer by radiation and convection
- 9. Determination of thermal contact conductance

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

To learn the basic concepts of inorganic, organic and physical chemistry

OBJECTIVES

- 1. To define the different parameter and concepts of inorganic chemistry
- 2. To apply different chemical theory to evaluate structure of molecules
- 3. To describe basic reaction mechanism of selective organic reactions
- 4. To explain the basic concepts of physical chemistry

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. **Define** the different parameter and concepts regarding atomic structure, periodic table, chemical bonding, acids and bases.
- 2. **Apply** different theory on chemical bonding and hybridization to evaluate structure of molecules.
- 3. Classify hydrocarbon and explain the mechanism of selective organic reactions
- 4. **Explain** chemical equilibrium, thermo-chemistry, chemical and ionic equilibria, electro-chemical cells.

COURSE CONTENT

- 1. **Atomic Structure:** Atomic structure & quantum theory, Different atomic models, Heisenberg's uncertainty principle
- 2. **Periodic Table:** Electronic configurations, Periodic classification of elements, Periodic properties of elements, Properties and uses of noble gases
- 3. Alkali metals: Chemical properties and uses
- 4. **Chemical Bonding:** Types and properties, Lewis theory, VBT, MOT, Hybridization and shapes of molecules
- 5. Basic concepts of organic chemistry: History, Physical and chemical properties, Classification
- 6. Hydrocarbon: Chemistry of hydrocarbon, Nomenclature, Properties
- 7. **Selective organic reactions:** Oxidation-reduction, Substitution, Addition, Polymerization, Alkylation reactions
- 8. Acids-Bases/Buffer Solution: Different concepts of acids-bases, Buffer solution, Mechanism of buffer solution, Henderson-Hasselbalch equation, Water chemistry and pH of water
- 9. Solutions: Solutions and their classification, Unit expressing concentration, Colloid and

colloidal solution, Colligative properties and dilute solutions, Raoult's law, Van't Hoff isotherm

- 10. **Thermochemistry:** Laws of thermochemistry, Enthalpy, Hess's law, Heat of formation, Heat of neutralization, Heat of reaction
- 11. **Electrochemistry:** Electrolytic conduction and its mechanism, Faraday's law, Kohlrausch Law, Debye-Huckell-Onsager theory, Conductometric titrations, Different types of cells
- 12. **Chemical Equilibria:** Equilibrium law/constant, K_p and K_c, Homogeneous and heterogeneous equilibria, Le Chatelier's principle
- 13. Phase Rule: Basic terms and phase rule derivation, Phase Diagram of water and carbon dioxide
- 14. **Chemical Kinetics:** Pseudo and zero order reaction, Half-life, Determination and factors affecting the rate of a reaction, First order reaction, Second order reaction, Collision theory, Transition state theory

COURSE SCHEDULE

Week	Contents	Assessment
Week 1	Atomic Structure	
Class 1	Concepts of atomic structure, Different atom models	
Class 2	Concepts of atomic structure, Different atom models	
Class 3	Hydrogen spectral lines, Quantum numbers	
Week 2	Atomic Structure/Periodic Table	
Class 4	Heisenberg's uncertainty principle	
Class 5	Electronic configuration, periodic classification of elements	CT 1,
Class 6	Electronic configuration, periodic classification of elements	Final Exam
Week 3	Periodic Table/Alkali Metals/Chemical Bonding	
Class 7	Periodic properties of elements, Properties and uses of noble gases	
Class 8	Alkali metals: Chemical properties and uses	
Class 9	Chemical bonding (types, properties, Lewis theory, VBT)	
Week 4	Chemical Bonding	
Class 10	Molecular Orbital Theory (MOT)	
Class 11	Molecular orbital theory (MOT)	
Class 12	Hybridization and shapes of molecules	
Week 5	Chemical Bonding/Organic Chemistry	CT 2,
Class 13	Hybridization and Shapes of Molecules	Final Exam
Class 14	Hybridization and Shapes of Molecules	
Class 15	Basic concepts of organic chemistry: History, physical and chemical	
	properties, classification	
Week 6	Organic Chemistry	
Class 16	Chemistry of hydrocarbon, nomenclature and properties	
Class 17	Selective organic reactions: oxidation-reduction, substitution	
Class 18	Selective organic reactions: addition, polymerization, alkylation	
Week 7	Acids-Bases	
Class 19	Different concepts of acids-bases	

Class 20	Buffer solution, mechanism of buffer solution	
Class 21	Henderson-Hasselbach equation	Mid Term,
Week 8	Acids-Bases/Solutions	Final Exam
Class 22	Water chemistry and pH of water	
Class 23	Solutions and their classification, unit expressing concentration	
Class 24	Colloid and colloidal solution	
Week 9	Solutions/Thermochemistry	
Class 25	Colligative properties and dilute solutions	
Class 26	Raoult's law, Van't Hoff isotherm	
Class 27	Thermochemistry: Laws of thermochemistry	
Week 10	Thermochemistry/Electrochemistry	
Class 28	Enthalpy, Hess's law	
Class 29	Heat of formation, heat of neutralization, heat of reaction	
Class 30	Electrolytic conduction and its mechanism	
Week 11	Electrochemistry	
Class 31	Faraday's law, Kohlrausch law, Debye-Huckel-Onsagar theory	Mid Term,
Class 32	Conductrometric titrations	Final Exam
Class 33	Different types of cells	
Week 12	Chemical Equilibrium	
Class 34	Equilibrium law/constant, K_p and K_c	
Class 35	Homogeneous and heterogeneous equilibria	
Class 36	Le Chatelier's principle	
Week 13	Phase Rule/Chemical Kinetics	
Class 37	Phase rule: Basic terms and phase rule derivation	
Class 38	Phase diagram of water and carbon dioxide	
Class 39	Pseudo and zero order reaction, Half-life	СТ 3,
Week 14	Chemical Kinetics	Final Exam
Class 40	Determination and factors affecting the rate of a reaction	
Class 41	First order reaction, Second order reaction	
Class 42	Collision theory, transition state theory

RATIONALE

To learn the basic concepts of inorganic and physical chemistry

OBJECTIVES

To learn quantitative analysis techniques of inorganic and physical chemistry

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. **Define** the different parameters regarding acid and base neutralization, titration and quantitative analysis of metals etc. and others key words like primary standard substances, secondary standard substances, molarity, normality, indicator, equivalent weights and so on.
- 2. **Explain** the different phenomena regarding iodimetric and iodometric method, complexometric titration etc.
- 3. Estimate zinc, ferrous content in water sample by using various titrimetric methods.
- 4. Summarize a report of any project work and apply in real life

COURSE CONTENTS

- 1. Standardization of Sodium Hydroxide (NaOH) Solution with Standard Oxalic Acid dihydrate (C₂H₂O₄.2H₂O) Solution.
- 2. Standardization of Hydrochloric Acid (HCl) Solution with Standard Sodium Hydroxide (NaOH) Solution.
- 3. Standardization of Hydrochloric Acid (HCl) Solution with Standard Sodium Carbonate (Na₂CO₃) Solution.
- 4. Determination of Calcium (Ca) Content in a Calcium Chloride dihydrate (CaCl₂.2H₂O) Solution with Standard Di-Sodium Ethylene Diamine Tetra Acetic acid (Na₂-EDTA) Solution.
- 5. Standardization of Sodium Thiosulphate Pentahydrate (Na₂S₂O₃.5H₂O) Solution with Standard Potassium Dichromate (K₂Cr₂O₇) Solution.
- Estimation of Copper (Cu) Content in a Copper Sulphate Pentahydrate (CuSO₄.5H₂O) (Blue Vitriol) Solutions by Iodometric Method with Standard Sodium Thiosulphate Pentahydrate (Na₂S₂O₃.5H₂O) Solution.
- 7. Standardization of Potassium Permanganate (KMnO₄) Solution with Standard Oxalic Acid dihydrate (C₂H₂O₄.2H₂O) Solution.
- 8. Determination of Ferrous (Fe) Content in a Ammonium Ferrous Sulphate (Mohr`s Salt) [FeSO₄.(NH₄)2SO₄.6H₂O] Solution with Standard Potassium Permanganate(KMnO₄) Solution.
- 9. Determination of Zinc (Zn) Content in a Zinc Sulphate Heptahydrate (ZnSO₄.7H₂O) Solution

with Standard Di-Sodium EthyleneDiamineTetraAcetic acid (Na₂-EDTA) Solution by using Eriochrome black T indicator.

Outcome Based Education (OBE)

RATIONALE

This course is the basic physics in the field of waves and oscillations, optics and modern physics. The course will be emphasized the basic concepts, theories and solve quantitative problems which can be applicable in a wide spectrum of engineering disciplines.

OBJECTIVES

- 1. To define the different parameters, concepts, logical and critical thinking with scientific knowledge of waves and oscillations, optics and modern physics.
- 2. To explain the basic theories and laws of waves and oscillations, optics and modern physics.
- 3. To solve numerical and analytical problems regarding waves and oscillations, optics and modern physics.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. Be able to **Define** different basic parameters in the field of Waves and Oscillations, Optics and Modern physics such as periodic motion, simple harmonic motion, undamped oscillations, interference, diffraction, polarization and prism, photoelectric effect, Compton effect, matter wave, atomic model, radioactive decay, fusion, fission etc.
- 2. Be capable to **Explain** different basic theories in the field of Waves and Oscillations, Optics and Modern physics such as the wave motion for different systems along with energy, different formula for interference, diffraction, polarization special theory of relativity, Compton theory, nuclear transformation, and nuclear reaction etc.
- 3. Be skilled to **Solve** quantitative problems in the field of Waves and Oscillations, Optics and Modern physics such as energy of wave motion, wavelength, diffraction pattern, relativistic energy, photon energy, Compton shift, nuclear binding energy etc.

COURSE CONTENTS

1. Waves and Oscillations

Simple Harmonic Motion (SHM) and its properties, Differential equation of a SHM and its solution, total energy of a body executing SHM, average kinetic and potential energy of a body executing SHM, LC oscillatory circuit, Pendulum: simple, compound and torsional pendulum, spring-mass system, two body oscillation and reduced mass, damped harmonic motion and its different condition, forced oscillation and its different condition, resonance, equation of a progressive wave, differential equation of a progressive wave, energy density of wave motion, average kinetic and potential energy of a body executing SHM, Stationary wave

2. Optics

Lens, equivalent lens and power, defects of images and different aberrations, Interference of light,

Young's double slit experiment, Interference in thin film and Newton's ring method, diffraction of light, diffraction by single slit, diffraction by double slits, Fraunhofer and Fresnel bi-prism, diffraction gratings, polarization of light, Brewster's law, Malus law, polarization by double refraction Nicole prism, optical activity and polarimeters, optical instruments, resolving power of optical instrument, Laser: spontaneous and stimulated emission

3. Modern Physics

Galilean relativity & Reference frame, Special theory of relativity postulates, Galilean transformation, Lorentz Transformation, Length contraction, Time dilation, Velocity addition, relativity of mass, mass energy relation, Momentum energy relation, Photoelectric effect, Compton effect, de Broglie matter wave, Bohr atom model and explanation, atomic orbital and energy equation, classification of nucleus, nuclear binding energy, radioactivity, radioactive decay law, half-life, mean life, nuclear reaction, introduction to nuclear reactor

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

This course is a laboratory course for the basic physics in the field of waves and oscillations, optics, mechanics, electricity, modern physics and thermal physics. The course will be emphasized the fundamental experiments on different fields of physics which can be applicable in a wide spectrum of engineering disciplines. This laboratory course will enable students to understand basic physics practically as well as do work with team or individual.

OBJECTIVES

1. To develop basic physics knowledge practically

2. To practice use of basic scientific instrument.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. **Define** the different parameters regarding waves and oscillations, optics, mechanics, electricity, modern physics and thermal physics etc.
- 2. **Describe** the different phenomena regarding waves and oscillations, optics, mechanics, electricity, modern physics and thermal physics etc.
- 3. **Skilled** to Construct Experiments by an individual or by a group to determine different phenomena regarding waves and oscillations, optics, mechanics, electricity, modern physics and thermal physics etc.
- 4. **Prepare** a report for an experimental work.

COURSE CONTENTS

Quantitative measurement of different parameters in the field of waves and oscillations, optics, mechanics, electricity, modern physics and thermal physics such as:

Specific resistance of materials, high resistance, resistance of a galvanometer, Electrochemical equivalent (ECE) of copper, comparison of the E.M.F's of two cells, radius of curvature, wavelength of light, focal length of lens, specific rotation of sugar, refractive index of a liquid, thermal conductivity of a bad conductor, temperature co-efficient of resistance, pressure co-efficient of a gas, specific heat of a liquid, acceleration due to gravity, spring constant, rigidity modulus, young's modulus, moment of inertia, conservation of linear momentum, frequency of a tuning fork, surface tension, Planck's constant.

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

This course is one of the basic physics in the field of structure of matter, electricity and magnetism and properties of matter. The course will be emphasized the basic concepts, theories and solve quantitative problems which can be applicable in a wide spectrum of engineering disciplines.

OBJECTIVES

- 1. To define the different parameter and concepts of properties and structure of matter, electricity and magnetism.
- 2. To explain the basic theories of properties and structure of matter, electricity and magnetism.
- 3. To solve numerical problems regarding properties and structure of matter, electricity and magnetism.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. **Define** different basic parameters in the field of properties and structure of matter, electricity and magnetism such as elasticity, viscosity, surface tension, crystal structure, crystal defects, charge, Coulombs law, flux, etc.
- 2. **Explain** different basic theories in the field of properties and structure of matter, electricity and magnetism such as such as the Hooke's law, Bernoulli's equation, Bragg's law, bonding energy, electric field, dipole moment, Faraday's law etc.
- 3. **Solve** quantitative problems in the field of properties and structure of matter, electricity and magnetism such as such as elasticity, viscosity, packing factor, Miller indices, electricity, magnetism etc.

COURSE CONTENTS

<u>Properties of Matter</u>: Elasticity, Hooke's law, types of elasticity and different relation, Poisson's ratio, work done in a strain, Friction and dynamics of rigid body: Frictional force, types, laws and properties of friction, rotational of rigid bodies, moment of inertia, torque, work done by a torque, theorem of perpendicular and parallel axes, moment of inertia of different objects. Hydrodynamics: streamline and turbulent motion, tubes of flow, equation of continuity, energy of a fluid in motion, Bernoulli's equation, Torricelli's theorem, Viscosity: Newton's law of viscous flow, fugitive

elasticity, critical velocity, Poiseuille's equation, Stokes' law. Surface tension, theory of surface tension, pressure inside a liquid drop and a soap bubble, determination of surface tension.

Structure of matter : Crystalline and non-crystalline solids, single crystal and poly-crystal solids, unit cell, crystal systems, co-ordinations number, crystal planes and directions, NaCl and CsCl structure, packing factor, Miller indices, relation between inter-planar spacing and Miller indices, Bragg's law, methods of determination of inter-planar spacing from diffraction patterns; defects in solids: point defects, line defects, surface defects, bonds in solids, band theory of solids: distinction between metal, semiconductor and insulator, inter-atomic distances, calculation of cohesive and bonding energy.

Electricity and Magnetism : Electric charges and Coulomb's law, quantization of charge, electric field, electric field due to : point charge, dipole, charged rod and charged ring, electric flux and calculation of flux, Gauss' law, application of Gauss' law, electric potential, calculation of electric potential, equipotential surfaces, energy and electric potential, Capacitors, capacitance for different capacitors, energy store in a capacitor, dielectrics and atomic view of dielectrics and Gauss' law with dielectrics, Current density, drift speed, resistances, ohm's law and resistivity-an atomic view, Ampere's law, solenoid, toroid, Faraday's law, self-inductance and mutual inductance, inductance of solenoid and toroid, magnetic field intensity, susceptibility, permeability, magnetization, Classification of magnetic materials, magnetization curves, M-H hysteresis loop, soft and hard magnetic materials, Super para-magnetism, Maxwell equations.

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

The purpose of this course is to introduce basic knowledge of Differential and Integral Calculus and use it to engineering study.

OBJECTIVES

- 1. To impart basic knowledge on differential and integral Calculus to solve engineering problems and other applied problems.
- 2. Developing understanding some of the important aspects of rate of change, area, tangent, normal and volume.
- 3. To make proficient in imparting in depth knowledge of functional analysis such as increasing, decreasing, maximum and minimum values of a function

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. **Define** the limit, continuity and differentiability of functions, **identify** the rate of change of a function with respect to independent variables and **describe** the different techniques of evaluating indefinite and definite integrals.
- 2. **Apply** the concepts or techniques of differentiation and integration to solve the problems related to engineering study.
- 3. **Calculate** the length, area, volume, center of gravity and average value related to engineering study.

COURSE CONTENTS

- 1. **Differential Calculus:** Introduction, Differential Calculus for Engineering, Function and Limit, Continuity and Differentiability of function, Differentials. Cartesian differentiation Successive Differentiation, Leibnittz's Theorem, Rolle's Theorem, Mean Value Theorem, Taylor's theorem, Expansion of Finite and Infinite forms, Indeterminate form, Partial differentiation, Euler's theorem, Tangent, sub tangent and Normal, sub normal, Maxima and Minima, concavity, Curvature, Asymptotes.
- 2. **Integral Calculus:** Definition of Integration, Importance of Integration in Eng., Integration by substitution, Integration by parts, Standard integrals, Integration by successive reduction, Definite integrals and its properties, Integration as a limit of sum, Walli's formula, Improper Integrals, Beta and Gamma function, Multiple integral and its application, Arc lengths of curves, Area under a plain curve, Area of the region enclosed by two curves, Volume of solid revolution.

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

Purpose of this course is to introduce basic knowledge of ordinary and partial differential equations and use it to engineering study.

OBJECTIVES

- 1. To impart basic knowledge on ordinary and partial differential equations to solve engineering problems and other applied problems.
- 2. To develop understanding of some of the important aspects of ordinary and partial differential equations.
- 3. To provide knowledge on using concept of differential equations in engineering problems and solve other applied problems.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. **Define** various types of differential equations and **identify** the classifications of ordinary and partial differential equations, linear and non-linear differential equation.
- 2. **Apply** the knowledge to identify and **solve** the various type of ordinary and partial differential equations.
- 3. **Apply** the technique to obtain the inverse matrix that solve the system of linear equations

COURSE CONTENTS

- 1. **Differential Equations:** Introduction & Formulation of DE in Eng, Degree and order of ODE, Solution of first order differential equation by various methods. Solution of first order but higher degree DE by various methods, Solution of general linear DEs of second and higher order, Solution of Euler's homogeneous linear DEs, Solution of DEs by methods based on factorization, Frobenious methods, Bessel's functions, Legendre's polynomial, Formation PDE, Solution of linear first order PDE, Solution of Non-linear first order PDE, Standard form. Linear PDE with constant coefficients, PDEs of higher order and wave equation, particular solutions with boundary and initial condition, Applications of DE.
- 2. **Matrix:** Definition of matrix, different types of matrices, algebra of matrices, transpose and adjoint of a matrix and inverse matrix, rank and elementary transformation, solution of linear equation or system of linear equation, matrix polynomials determination characteristic roots and vectors, characteristic subspace of matrix and Eigen values and Eigen vectors, Cayley Hamilton theorem.

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

Purpose of this course is to introduce basic knowledge to identify and solve vector mathematical problems, to demonstrate practical applications of Laplace Transform and analyze co-ordinate geometry.

OBJECTIVES

- 1. To impart basic knowledge on the vector analysis, laplace transform and geometry.
- 2. To familiarize the students with straight lines, pair of straight lines, circles, conics in 2D and 3D co-ordinate systems.
- 3. To enable to find the length, volume and area of objects related to engineering study by using vector, application of Laplace transforms to ordinary differential equations and also solve the problems of the pair of straight lines, circles, system of circles, parabola, ellipse etc.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. **Know** the physical explanation of different vector notation and **Define** Laplace transform, inverse Laplace transform, different types of matrices, and their properties.
- 2. **Explain** the characteristics of conics and familiarize with straight lines, pair of straight lines, circles, radical axis and centre in 2D and 3D co-ordinate systems.
- 3. **Calculate** length, volume and area of objects related to engineering study by using vector, **Apply** Laplace transform to ODE and PDEs and the knowledge of geometry in engineering study. **Solve** the problems of the pair of straight lines, circles, system of circles, parabola, ellipse etc.

COURSE CONTENTS

- 1. Vector Analysis: Definition of Vector and scalers, Scaler and vector products of two vectors and their geometrical interpretation, Triple products and multiple products, Differentiation of vectors, Gradient of scaler functions, Divergence and curl of point functions, physical significance of gradient, divergence and curl, Definition of line, surface and volume integral, Integration of Vectors, Green's theorem and its application, Stoke's theorem and its application, Gauss theorem and its application in Engineering.
- 2. Laplace Transform: Definition of LT and Application of LT for Engineering , LT of some elementary functions and properties of LT, Sufficient condition for existence of LT, Inverse LT, LT of derivatives, Unit step function, Periodic function, Some special theorems on LT, Partial

fraction, Solution of DEs by LT, Heaviside expansion formula, Convolution theorem, Evaluation of improper integral, Application of LT.

3. **Co-ordinate Geometry:** Introduction to geometry for Engineering and Rectangular coordinates, Transformation of co-ordinates, changes of axes, pair of straight lines, general equation of second degree and reduction to its standard forms and properties, circles (tangents, normal, chord of contact, pole and polar), Equation of conics, homogeneous equations of second degree, angle between straight lines, pair of lines joining the origin to the point of intersection of two given curves, equations of parabola, ellipse in Cartesian and polar coordinates, system of circles (radical axes, coaxial circles, limiting points), Three dimensional co-ordinate system, direction cosines, projections, the plane (angle between two planes, parallel & perpendicular plane, distance of a point from a plane) and the straight line (coplanar lines, shortest distance between two given straight lines), standard equation of sphere, ellipsoid, hyperboloid straight lines, standard equation of coincides, sphere and ellipsoid.

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

To teach the students the concepts, principles and working field of Complex Variable, Statistics and Fourier analysis of different types of function. It is targeted to provide a basic foundation and applications of Fourier series, Fourier Integrals, orthogonal functions, and collection of numerical data systematically, complex analysis and observing data to give statistical assumption and probability. Finally, this course is designed to demonstrate practical applications of Complex Variable, Fourier analysis and Statistics and their methods of solution.

OBJECTIVE

- 1. To impart basic knowledge about Complex Variable, Statistics, Fourier analysis for different types of functions.
- 2. To familiarize the students with the characteristics of Complex Variable, Fourier series, Fourier Integrals and orthogonal functions.
- 3. To make proficient to familiarize with basic methods of statistics and their application.
- 4. To impart knowledge on Statistics, Complex Variable, Fourier analysis and thereby students able to solve engineering problems and to give physical interpretation.

COURSE OUTCOME

On successful completion of this course, students should be able to:

- 1. Recall the basic idea about Complex Variable and Statistics.
- 2. **Explain** the complex functions by line integrals, Cauchy's integral formulae and Cauchy's residue theorem.
- 3. Apply sampling theory and different tests in which giving concept about practical situation.
- 4. **Solve** complex engineering boundary value problems by Fourier analysis and probability distribution in engineering fields.

COURSE CONTENT

- 1. Complex Variable: Complex number system, General functions of a complex variable, Limits and continuity of a function of complex variable and related theorems, Differentiation and the Cauchy-Riemann equations, Mapping by elementary functions, Line integral of a complex function, Cauchy's Integral formula, Complex function, Convergence and Uniform convergence, Liouville's theorem, Taylor's and Laurent's theorem, Singular residues, Cauchy's residue theorem.
- **2.** Fourier Analysis: Real and Complex form of Fourier Series, Definition and expansion of a function of x in a Fourier Series, Physical application of Fourier Series, Finite Fourier

Transform, Fourier Integral Inverse Fourier transform, Fourier transform and their uses in solving boundary value problems, Diffusion, wave, Laplace Equation.

3. Statistics: Measures of central tendency, Frequency distribution, Graphical representation of data including stem, Leaf and Box Plot, Chebyshev's theorem, z-scores, standard deviation, moments, skewness and kurtosis, elementary probability theory, discontinuous probability distribution, Continuous probability distribution, Binomial, Multinomial, Negative binomial, Poisson, Exponential, Elementary sampling theory, Estimation, Sets and probability, Random variable and its probability distribution, Treatment of grouped sampled data, Normal distribution, Tests of hypothesis, regression and correlation, Analysis of variance, Chi-square distributions, Conditional probability, Bayes's Theorem.

RATIONALE

This course has mainly been designed to improve speaking and oral communication skills of the students. The course includes instructions and experience in speech preparation and speech delivery within various real-life situations, formal and informal. Emphasis will be given on various speeches, such as informative, persuasive and interactive. This course will help students progress in real life both personally and professionally. Students will be able to understand class lectures and can comfortably continue the Engineering course, and also to compete in the global job market and increase career skills.

OBJECTIVES

- 1. To develop the four basics skills of English language, i.e. listening, speaking, reading and writing.
- 2. To develop students' interpersonal skills engaging them in various group interactions and activities.
- 3. To improve students' pronunciation in order to improve their level of comprehensibility in both speaking and listening.
- 4. To give the students exposure to different types of texts in English in order to make them informed using different techniques of reading.
- 5. To gain an understanding of the underlying writing well-organized paragraphs and also to teach how to edit and revise their own as well as peer's writing.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. Listen, understand and speak English quickly and smartly using the techniques learnt in the class.
- 2. Understand the techniques of academic reading and academic writing
- 3. Communicate effectively within the shortest possible time to present ideas and opinions.
- 4. **Develop** competency in oral, written communication/presentation

COURSE CONTENTS

1. **Speaking:** Introduction to Language: Introducing basic skills of language, English for Science and Technology, Self-introduction and introducing others: How a speaker should introduce himself to any stranger / unknown person / a crowd, Name, family background, education, experience, any special quality/interest, likings/disliking, etc. Asking and answering questions,

COURSE INFORMATION

Course Code: LANG 202 **Course Title:** Advanced Communicative English **Level and Term:** Level 2 Term I Credit Hours: 1.50 Contact Hours: 3.00

PRE-REQUISITE None

CURRICULUM STRUCTURE Outcome Based Education (OBE)

RATIONALE

The English language course is designed for the students to develop their competence in communication skills for academic purposes especially in reading and writing. The approach will be communicative and interactive and will involve individual, pair and group work. Students will be exposed to different types of texts to develop efficient reading skill. Reading will also involve activities and discussions leading to effective writing. The course incorporates a wide range of reading texts to develop students' critical thinking which is one of the most essential elements required to write a good piece of academic writing. Emphasis is particularly put on the various forms of essay writing such as descriptive, narrative, cause-effect, compare-contrast, and argumentative. Upon completion of this course, students are expected to be able to communicate at various situations, participate in group activities and prepare formal speech for academic, professional and social purposes. This course also incorporates classroom instructions to provide guidelines on presentations and communication skills. In addition, the course emphasizes on providing constructive feedback on students' oral performances.

OBJECTIVES

- 1. To develop English language skills to communicate effectively and professionally.
- 2. To strengthen students' presentation skills.
- 3. To develop competency in academic reading and writing.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. **Understand** the techniques of academic reading and become acquainted with technical vocabularies.
- 2. **Understand** the techniques of effective academic writing such as research article/report writing.
- 3. **Communicate effectively** within the shortest possible time to present any report and research work.
- 4. **Analyze** any problem critically, analyze and interpret data and synthesize information to provide valid conclusions.

COURSE CONTENTS

1. **Reading:** Reading comprehension: Practice using different techniques; Academic reading: comprehension from department or subject related passages; Vocabulary for engineers (some common engineering terms for both general and department specific); Reading subject specific text to develop vocabulary

- 2. Writing: Writing semi-formal, formal/official letters, official Email; Applying for a job: writing cover letter and curriculum vitae; Essay writing: writing steps, principles and techniques, outlining, revising, editing, proofreading; Narrative and descriptive writing: comparison-contrast and cause-effect, argumentative and opinion expression, assignment writing; Analyzing and describing graphs or charts; Practicing analytical and argumentative writing.
- **3. Speaking**: Public speaking: Basic elements and qualities of a good public speaker; Set speech and extempore speech: how to get ready for any speech set or extempore; Individual/Group presentation: how to be ready for presentation, prepare script for good speech, preparing power point slides etc., selected books/selected stories for presentation.
- **4.** Listening: Listening to long lecture on some topics; Listening and understanding speeches/lectures of different accent.

RATIONALE

বাংলা আমাদের মাতৃভাষা। বাংলা শুধু একটি ভাষাই নয়, বরং এর সাথে বাংলাভাষী মানুষদের সংস্কৃতি, ইতিহাস এবং স্বকীয়তা ওতপ্রোতভাবে জড়িত। এই ভাষা শেখার মাধ্যমে এ অঞ্চলের মানুষদের ঐতিহ্য, মূল্যবোধ এবং জীবনপ্রক্রিয়া সম্পর্কে সম্যক ধারণা লাভ করা যায়। সর্বোপরি 'বাংলা ভাষা ও সাহিত্য' বিষয়টি অধ্যয়নের মাধ্যমে স্নাতক (সম্মান) প্রোগ্রামের ছাত্রছাত্রীগণ এর তাত্ত্বিক বিষয়ে যেমন দক্ষতা অর্জন করবে তেমনি এই কোর্স হতে লব্ধ ধারণা তাদের জ্ঞানের পরিধি ও সংস্কৃতি সম্পর্কে ধারণা বৃদ্ধি এবং এর প্রায়োগিক কৌশলসমূহ আরও ভালোভাবে রপ্ত করতে সাহায্য করবে।

OBJECTIVES

- ১. বাংলা ভাষা, ব্যাকরণ ও সাহিত্যের মৌলিক বিষয় সম্পর্কে ধারণা প্রদান।
- মার্তৃভাষার শুদ্ধ উচ্চারণ শিক্ষা।
- পঠিত বিষয়ের ভাব অনুধাবন করা এবং তা প্রকাশে দক্ষ করে তোলা।
- বাংলা ভাষায় পেশাগত দাপ্তরিক পত্রালাপ (Official Correspondence) এবং সৃজনশীল রচনার জন্য প্রাতিষ্ঠানিক শিক্ষা প্রদান।

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- সৃজনশীল রচনায় বাংলা ভাষার দক্ষ প্রয়োগ।
- ২. মাতৃভাষায় শুদ্ধ উচ্চারণে বক্তব্য প্রদানে দক্ষতা অর্জন।
- লিখিত ও মৌলিক প্রয়োগে ভাষার সৌকর্য রক্ষা করা।
- 8. মাতৃভাষায় দাপ্তরিক পত্রালাপে দক্ষতা অর্জন।

COURSE CONTENTS

- ক। সাহিত্য (প্রবন্ধ, গল্প ও কবিতা)

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

This course has been designed for undergraduate engineering students to help them learn the rich history of Bangladesh and to provide them with basic knowledge of historical events which eventually led to the formation of Bangladesh and constitution of Bangladesh, current trends in economic development and thereby to enhance their understanding of present phenomena in the light of history which will make them responsible citizen.

OBJECTIVES

- 1. To equip students with factual knowledge that will enable them to learn history of Bangladesh.
- 2. To trace the historical roots of Bangladesh as an independent state focusing on the social, cultural and economic developments that have taken place since its independence.
- 3. To promote an understanding of the development of Bangladesh and its culture.
- 4. To create an awareness among the students about the History, Geography, Economics, Politics and Culture of Bangladesh.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. **Identify** specific stages of Bangladesh's political history, through the ancient, medieval, colonial and post-colonial periods and critically analyze plurality of cultural identities of Bangladesh.
- 2. **Explain** the economy and patterns of economic changes through qualitative and quantitative analysis.

COURSE CONTENTS

- 1. <u>Bangladesh Geography:</u> Location, Area, Boundary, Physiography, River system, Forest and Climate, Demography of Bangladesh, Maritime zones.
- 2. <u>History:</u> Overview of the ancient Bengal; anthropological identity of the Bengali race; main trends in the history of medieval Bengal; Bengal under the East India Company; religious and social reform movements; nationalist movements, division of the Indian sub-continent; language movement 1948-1952; education movement of 1962; six-point movement of 1966; mass uprising of 1969; war of independence and emergence of Bangladesh in 1971, Constitution of Bangladesh, Political Development and Democratic Transition (1971-1990),

Political Development (1991- Present), Bangladesh's contribution to world peace and its Security.

3. <u>Environment, Economy and Culture:</u> Land, Characteristics of tropical monsoon climate, Forests and biomass, Fish, Minerals, Health, Education, Agriculture, Industries, NGOs, Population, Sociological and Cultural aspects of Bangladesh, Economy and National development, Development and Progress of the Millennium Development Goals (MDGs), Public Administration in Bangladesh, State of Good Governance in Bangladesh, Art and Literature, Main traditional cultural events, Vision-2021, Digitalization, Tourism and Natural Resources, Bangladesh and International Relations.

PRE-REQUISITE

None

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

The course is designed to make students understand the overlapping connection between engineering and management in an organization through the study of varied management practices and leadership traits as an engineer.

OBJECTIVES

- 1. To introduce different management functions and approaches.
- 2. To expose students to different views and styles of leadership
- 3. To understand how an organization functions collaboratively with managers and engineers.
- 4. To understand various personality traits and its impact on leadership and management.
- 5. To solve real-world management problems as an engineer.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. **Explain** with the fundamental concepts of leadership and management skills.
- 2. Understand the role and contribution of a leader in achieving organizational goals.
- 3. **Understand** the contribution of leadership traits and management skills in decision making and solving real life problems

COURSE CONTENTS

- 1. **Leadership:** Leadership styles, leadership theories, traits of a good leader, conflicts negotiation, engineer as a leader, manpower control, motivation and theories, group dynamics and participative management.
- 2. **Planning and Control:** Management functions, types, roles and responsibilities, management skills, management approaches, organization.
- 3. **Planning and Development:** Organizational planning, organizational development models, research process and diagnostic methods.
- 4. **Personnel planning and HR Management System:** Process of Human Resource Planning, performance management and appraisal.
- 5. **Cost and Financial Management:** Elements of costs of products, break-even analysis, investment analysis, net present value, payback period and benefit-cost ratio.
- 6. **Marketing Management:** Marketing concepts & organization, industrial and consumer selling, channel & advertising decisions and new product strategy.
- 7. **Operation management:** Project scheduling, demand and supply forecasting, inventory control

and quality management.

- 8. **Information Technology and Management:** Management information system (MIS), enterprise resource planning (ERP).
- 9. Case Studies: Solving real-world management problems.

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

This course is designed to present engineering students the major concepts and techniques of engineering economic analysis that are needed in the decision-making process. This course provides an introduction to a broad range of economic concepts, theories and analytical techniques. The emphasis of this course is on the analytical analysis of money and its impact on decision making. The use of a market, supply and demand, model will be the fundamental model in which trade-offs and choices will be considered through comparison of costs and benefits of actions. The role of government policy to address microeconomic market failures and macroeconomic objectives will be examined.

OBJECTIVES

- 1. To help students demonstrate the knowledge of the fundamental concepts of economics.
- 2. To teach how efficiency in organizational decision-making can be achieved.
- 3. To help students understand consumer behavior, elasticity of market demand and different market structure.
- 4. To help students realize the importance of various macroeconomic aggregates such as national income, full employment, unemployment, consumption and savings function, inflation, productivity and the major challenges associated with the measurement of these aggregates.
- 5. To help students apply the basic theories of economics to make their project management costeffective.
- 6. To help students recognize the basic features of economic development and regarding planning for the economy of the country.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. Be able to **understand** the basic concepts and principles of Microeconomics; demand, supply, market equilibrium, consumer behavior, production, market structure and Macroeconomics; national income, employment, consumption function, saving function, inflation.
- 2. Be able to **determine** the equilibrium in micro & macroeconomic level to reach maximum social welfare.
- 3. Be able to **analyze** consumer behavior, production process, cost of production and market structure to the benefit of both the consumer and the producer.
- 4. Be able to **evaluate** the economy of Bangladesh through national income, consumption, investment, inflation situation and recommend economic policy to develop the domestic economy as well as the relationship with the global economy.

COURSE CONTENTS

- 1. <u>Short History of the Evolution of Economics Thought</u>: Definition of economics in various predominant schools of economics.
- 2. <u>Consumer Theory</u>: Definition of Utility, Law of diminishing marginal utility, Indifference Curve & MRS, Budget Line & Relative price, Consumer Equilibrium
- **3.** <u>Theory of Production:</u> Short-run VS Long-run production function, Stages of production in one-variable input production, Long-run production curve.
- 4. <u>Production Possibility Frontier</u>: PPF Curve, Applying the PPF to Society's Choices by the Engineers.
- 5. <u>Demand & Supply:</u> Definition, Law of Demand, Law of Supply, Movement along the curve & Shift, Equilibrium analysis
- 6. <u>Elasticity of Demand</u>: Different types of elasticity, Different types of price elasticity, Relation between AR, MR and elasticity Mathematical Analysis
- 7. <u>Cost Analysis:</u> Determining, Average Cost (AC), Marginal Cost (MC) from Total Cost (TC), Depreciation & Break-even point, Short-run cost analysis, Long-run cost analysis
- 8. <u>Analysis of Market Structure:</u> Perfectly Competitive Market, Monopoly and Monopolistic Market, Oligopoly (Cournot model & Stackelberg model)
- **9.** <u>National Income</u>: Definition of GDP, GNP, NNP, NI, Three approaches GDP calculation, Shortcoming of GDP calculation.
- 10. <u>Circular Flow of National Income:</u> Three sector Economy (Closed Economy), Four Sector Economy (Open Economy)
- 11. <u>Inflation:</u> Inflation measuring indices, Calculation of GDP deflator & CPI, Demand-Pull and Cost-Push Inflation
- 12. Money: History of Money, Functions of Money, Fractional Reserve Banking
- 13. Monetary policy: Analysis of Financial Market, Monetary Policy Instruments
- 14. <u>Fiscal Policy:</u> Taxation Structures, Government Spending Multiplier, Tax Multiplier, Income Tax Calculation
- **15.** <u>Exchange rate:</u> Definition & Calculation, How exchange rate impacts import & exports, Balance of Payment
- **16.** <u>Unemployment:</u> Definition of terms related to unemployment, Calculation of unemployment rate, Four fundamental types of unemployment, Keynes Full Employment Theory, Analysis of labor market through various unemployment theories.
- 17. <u>Engineering Economics</u>: Definition, Single Payment factor, Single Payment factor (Inflation & Tax Adjusted), Uniform Series factor, Gradient Series factor
- **18.** <u>Maritime Trade:</u> Process of international trade using maritime shipping routes, Geo-politics related to maritime trade.

RATIONALE

This course has been designed to understand the human inter-personal relationship and human psychologyinthesocietyandtoapplythisknowledgeinthepracticalfieldasanengineerthrough the study of varied societies and cultures.

OBJECTIVES

- 1. To learn basics, scopes and perspectives of sociology.
- 2. To understand societal and cultural issues in national, global and environmental context.
- 3. To synthesis between social problem and social satisfaction in real life.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. Understand the basic nature, scope and perspective of sociology and the criteria of social research process and methodologies.
- 2. Apply contextual knowledge to assess societal and cultural issues in national and global context and also environmental context for sustainable development.
- 3. Analyze social problem, social stratifications, socialism, capitalism and economic life and political issues.

COURSE CONTENTS

- 1. Nature and scope sociological imagination, perspectives of sociology.
- 2. Stages of social research and research method.
- 3. Culture and civilization, socialization and self-development
- 4. Globalization and social changes, media and individual
- 5. Social organizations and social problems, social stratification;
- 6. Industrial revolution, capitalism and socialism,
- 7. Work and economic life
- 8. Environment and human activities, climate change and global risk
- 9. Population and human society, urbanization and city development, social changes and technology

RATIONALE

The development of the modern law of the sea and the growing concern for the condition of the oceans have given rise to a number of legal regimes addressing problems of the marine environment including sources of pollution and ways of protection. The international law of the sea provides a foundation for continuing progress. This course introduces to the national and international legal framework and law on marine pollution and maritime industries.

OBJECTIVES

- 1. To familiarize with marine environment and with the types and sources of marine environment pollution.
- 2. To impart the knowledge of the importance of the protection the oceans from pollution.
- 3. To give brief idea on various maritime laws and industrial labor act.
- 4. Understand the structures of sustainable environmental and ship recycling procedure.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. **Identify** the sources of marine pollution and **explain** the impacts of sectorial marine activities.
- 2. **Describe** importance of the protection the oceans from pollution and **outline** the regional approach to combat pollution of the marine environment
- 3. **Analyze** traditional environmental challenges, their connection to broader development issues, and the role of Life Cycle Assessment in evaluating environmental impact.
- 4. **Ability** to analyze major developments in international law and understand regulations for marine pollution prevention, ocean governance, cargo ship safety, and seafarer rights.

COURSE CONTENTS

- 1. Definition of the Marine Environment, importance of the marine environment, Scope of the Marine Environment, pollution of marine environment
- 2. Types and sources of marine pollution (pollution from ships, pollution by dumping wastes at sea, land-based sources, pollution resulting from seabed activities, ship recycling), environmental risk of deep-sea mining, impacts of land-based activities.
- 3. Introduction to Environmental Sustainability, Domestic and international law, Traditional environmental issues and broader development, Life Cycle Assessment
- 4. Major Developments in the International Law of Marine Pollution (MARPOL, SOLAS) and Law of the Seas (UNCLOS), International Convention of Load Lines, Labor Act 2006, Merchant Shipping Ordinance 1983, Bangladesh Merchant Shipping Act 2020.

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

The Fundamentals of Research Methodology is a hands-on course designed to impart education in the foundational methods and techniques of academic research in Science and Engineering context. UG students would examine and be practically exposed to the main components of a research framework i.e., problem definition, research design, data collection, ethical issues in research, time management, report writing, and presentation. Once equipped with this knowledge, participants would be well-placed to conduct disciplined research under supervision in an area of their choosing. In addition to their application in an academic setting, many of the methodologies discussed in this course would be similar to those deployed in professional research environments.

OBJECTIVES

The primary objective of this course is to develop a research orientation among the UG students and to acquaint them with fundamentals of research methods. Some other objectives of the course are:

- 1. To evaluate/review related extant literature, form a variety of sources, pertinent to the research objectives/questions.
- 2. To expose students to various research methodologies (design), relevant to the research problem needing to be addressed.
- 3. To explain and justify how researchers will collect and analyze research data.
- 4. To educate students in the common mistakes, research misconduct, and ethical considerations in the field of research methodology.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. **Understand** the research fundamentals and **formulate** problem statement and research questions/objectives.
- 2. Formulate and compose a research proposal considering research activities/design, background studies, and following standard guidelines.
- 3. **Develop writing** and presentation skill and **demonstrate** ethical considerations in conducting Research.

COURSE CONTENTS

1. **Foundations of Research:** Meaning of Research; Definitions of Research; Objectives of Research; Motivation in Research; General Characteristics of Research; Criteria of Good Research; Types of Research; Concept of theory, empiricism, deductive and inductive theory; Characteristics of scientific method.

2. Problem Identification and Formulation: Meaning and need of Review of Literature;

How to Conduct the Review of literature; Research Question – Investigation Question – Measurement Issues – Hypothesis – Qualities of a good Hypothesis –Null Hypothesis & Alternative Hypothesis. Hypothesis Testing – Logic &Importance.

3. **Research Design:** Concept and Importance in Research – Features of a good research design – Exploratory Research Design – concept, types and uses, Descriptive Research Designs – concept, types and uses. Experimental/Computational Design: Concept of Independent & Dependent variables.

4. **Data Analysis:** Data Preparation – Univariate analysis (frequency tables, bar charts, pie charts, percentages), Bivariate analysis – Cross tabulations and Chi-square test including testing hypothesis of association.

5. **Research Misconduct and Ethics:** Understand the research misconduct; type of research misconduct; Ethical issues in conducting research; Ethical issues related to publishing, Plagiarism and Self-Plagiarism.

6. Use of Tools / Techniques for Research: Layout of a Research Paper; Methods to search required information effectively; Reference Management Software like Zotero/Mendeley; Software for paper formatting like LaTeX/MS Office; Software for detection of Plagiarism. Time management and developing Gantt Charts.

Week	Topics	
1	Foundations of Research: Meaning of Research; Definitions of	
	Research; Objectives of Research; Motivation in Research;	
	General Characteristics of Research; Criteria of Good Research;	
	Types of Research; Concept of theory, empiricism, deductive	Continuous
	and inductive theory; Characteristics of scientific method.	Assessment
2	Practice session on Foundations of Research	(presentation/
3	Problem Identification & Formulation: Meaning & need of	quiz/other
	Review of Literature; How to Conduct the Review of literature;	assignment)
	Research Question - Investigation Question - Measurement	assignment)
	Issues - Hypothesis - Qualities of a good Hypothesis -Null	
	Hypothesis & Alternative Hypothesis. Hypothesis Testing -	
	Logic &Importance.	
4	Practice session on Problem Identification & Formulation	Assignment 1
5	Research Design: Concept and Importance in Research -	Assignment has to
	Features of a good research design - Exploratory Research	provide before,
	Design - concept, types and uses, Descriptive Research Designs	here students will
	- concept, types and uses. Experimental Design:	submit report and

	Concept of Independent & Dependent variables.	give PPT
6	Practice session on Research Design	
7	Data Analysis: Data Preparation – Univariate analysis	
	(frequency tables, bar charts, pie charts, percentages), Bivariate	
	analysis - Cross tabulations and Chi-square test including	
	testing hypothesis of association.	
8	Practice session on Data Analysis	
9	Research Misconduct and Ethics: Understand the research	
	misconduct; type of research misconduct; Ethical issues in	
	conducting research; Ethical issues related to publishing,	
	Plagiarism and Self-Plagiarism.	
10	Practice session on Research misconduct and Ethics	
11	Use of Tools / Techniques for Research: Layout of a Research	
	Paper; Methods to search required information effectively;	Continuous
	Reference Management Software like Zotero/Mendeley;	Assessment
	Software for paper formatting like LaTeX/MS Office;	(presentation/
	Software for detection of Plagiarism. Time management and	quiz/other
	developing Gantt Charts.	assignment)
12	Practice session on Use of tools / techniques for Research	
13	Review Session (Theory) – I	Assignment 2
	/Final Presentation	Assignment has to
14	Review Session (Practice) – II	provide before,
	/Final Presentation	here students will
		submit report and
		give PPT

COURSE INFORMATION

Course Code: GEA 407 **Course Title:** Principles of Accounting **Level and Term:** Level 4 Term I Credit Hours: 2.00 Contact Hours: 2.00

PRE-REQUISITE None

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

The course provides students with a basic grounding in topics such as assets and liabilities, financial analysis, planning and budgeting and investment appraisal with specific reference to unique aspects of finance and accounting in the realm of engineering, all of which are important in understanding accounting and finance. It is comprised of a variety of different learning resources including case studies of financial decision making in business and examples of when things go wrong and how this can be avoided.

OBJECTIVES

- 1. To know the meaning, history and definition of accounting, the users and uses of accounting, importance of ethics in financial reporting.
- 2. To impart knowledge, the International Financial Reporting (IFRS), Generally Accepted Accounting Principles (GAAP), cost principle, monetary unit assumption and the economic entity assumption.
- 3. To familiarize with and enable to prepare and understand the worksheet, preparation of financial statements, cost benefits analysis of different projects with honesty and integrity.
- 4. To provide the students with an in-depth knowledge of Management Accounting to enable them to apply its methods and techniques for preparing and presenting information for management decision-making and control purposes.
- 5. To apply selected management accounting techniques and analyze the implications of the techniques with regards to cost-volume profit analysis, budgeting, standard costing and variance analysis.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. **Understand** the cost principle, monetary unit assumption and the economic entity assumption and ethics in financial reporting for each and every project.
- 2. **Understand** worksheet, preparation of financial statements, cost benefit analysis of different projects.
- 3. **Acquire** knowledge of Management Accounting and apply it for preparing and presenting information for management decision-making and control purposes.
- 4. **Apply** and **analyze** the cost-volume profit, budgeting, standard costing and variance analysis for any project.

COURSE CONTENTS

1. Accounting in Action

- a. History & Definition of Accounting,
- b. Objectives and Importance of Accounting
- c. Accounting & Engineering
- d. International Financial Reporting Standard (IFRS), Generally Accepted Accounting Principles (GAAP), Ethics in Accounting
- e. Accounting Equation (Math)
- 2. Recording Process: Journal, Ledger, T-account and Trial balance
- **3.** Adjusting the Accounts: Adjusting Entries, Adjusted Trial Balance, Income Statement, Retained Earnings Statement and Statement of Financial Position (Balance Sheet), Worksheet
- 4. Financial Statement Analysis: Horizontal Analysis, Vertical Analysis and Ratio Analysis.
- **5.** Computerized Accounting System: Manual vs. Computerized Accounting system, Some Accounting Software: NetSuite ERP. Tipalti. Sage Business Cloud Accounting. Sage 50cloud. Plooto. Tradogram. Tally accounting software.
- 6. Cost Concepts:
 - a. Explain The Distinguishing Features of Managerial Accounting
 - b. Identify The Three Broad Functions of Management
 - c. Classification of Costs on Various Bases
 - d. Indicate How Cost of Goods Manufactured is Determined, Break Even Point (BEP) for Different Projects.
- 7. Absorption costing and Variable costing:
 - a. Prepare Profit Statements Based on a Variable Costing and Absorption Costing System
 - b. Cost Volume Profit (CVP) Analysis for different engineering projects
 - c. Account for the difference in profits between variable and absorption costing profit calculations
 - d. Explain the arguments for and against variable and absorption costing
- **8.** Job Order Costing and Process Costing:
 - a. Job Order Costing
 - b. Process Costing
- 9. Short & Long-Term Decision-Making in Accounting:
 - a. Relevant & Irrelevant Costs for Decision-Making
 - b. How to Determine Costs & Make Decisions
 - c. Contrast annual rate of return and cash Payback in Capital Budgeting, Budgeting for Various Engineering Projects.
 - d. Distinguish between the Net Present Value and Internal Rate Of Return Method

CURRICULUM STRUCTURE Outcome Based Education (OBE)

RATIONALE

This course is an introduction to engineering ethics, which stresses analytical reasoning and emphasizes clear thinking regarding the application of professional ethical codes to specific cases. Theory includes ethics and moral philosophy of engineering which approaches to ethical issues include: analyzing the factual, conceptual, application, and moral aspects of an issue; evaluating the risks and responsibilities of a particular course of action; and using theories of ethics or codes of ethics developed by engineering societies as a basis for decision making. Ethics can be built into the education of engineering students and professionals, either as an aspect of courses already being taught or as a component of engineering projects to be examined along with research findings. This course will help students to conceptualize the dynamics of the ethical practice in the Naval Architecture and Marine Engineering domain.

OBJECTIVES

- **1.** To develop student's ability in analyzing and interpreting the real life situation and to enhance the student's Moral/ Ethical integrity for the practice of Engineering Profession.
- 2. To develop attitudes required from engineers and values shared by engineers.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. **Explain** the basic perception of profession, professional code of ethics, various moral & social issues, industrial standards and role of professional ethics in engineering field.
- 2. **Identify** and **analyze** practical legal problems commonly encountered by engineers in their professional field/industry and **formulate** solutions to some of the legal problems
- 3. **Practice** professional responsibilities of an engineer for safety and risk benefit analysis.
- 4. **Assess** the codes of professional conduct and their implications in Naval Architecture and Marine Engineering field.

COURSE CONTENTS

- 1. Introduction to Engineering ethics and professionalism; History and development of engineering ethics and Ethical theories; Ethics and law, Nature of ethical problems, Analysis of Ethical Problems, Types of issues in ethical problem solving.
- 2. Applied ethics in engineering: Case Studies of ethics and Ethical Problem-Solving Techniques; Risk, Safety, and Accidents;
- 3. Engineer's Responsibilities and Rights; Human qualities of an engineer. Obligation of an engineer to the clients.
- 4. Introduction to Philosophy of Engineering; Professional Engineering Codes, Moral Reasoning

and Codes of Ethics, Codes of Ethics (IEB); Code of Ethics (BAERA & IAEA), Moral Frameworks for Engineering Ethics, Attitude of an engineer to other engineers. Measures to be taken in order to improve the quality of engineering profession.

5. Ethical expectation: Employers and employees, inter-professional relationship, Professional Organization – maintaining a commitment of ethical standards. Desired characteristics of a professional code. Institutionalization of ethical conduct. Environmental Ethics.

CURRICULUM STRUCTURE

Outcome Based Education (OBE)

RATIONALE

This course has been designed to understand the overlapping connection between engineering and management with financial matters in an organization through the study of varied management practices and finance as an engineer.

OBJECTIVES

- 1. To introduce some aspects of business management and business organization.
- 2. To identify the tools and techniques needed to lead any project to its intended conclusion.
- 3. To introduce sales fundamentals include understanding the customer and the competition, sales strategy, sales management, product positioning, product life cycle, sales structures, margins, and prospecting for new customers.

COURSE OUTCOMES (COs)

On successful completion of this course, students should be able to:

- 1. **Develop** in depth idea on ship design and building project management and organization to perform the Management Functions.
- 2. Compare between selected Theories of Management.
- 3. **Design** ship building project and to perform the functions in the Marketing Mix.
- 4. **Develop** knowledge of effective material management; management and resource allocation; Engineering economy and assessment on ethical issues in business situations.

COURSE CONTENTS

- 1. **Management Functions and Organization:** Evolution; Management functions: organization, theory and structure, span of control, authority delegation, manpower planning.
- 2. **Human Resource Management:** Importance, need hierarchy, motivation, leadership, wage incentives, performance appraisal and participative management.
- 3. **Production Control and Management Strategy:** Production planning and control (PPC) functions, quantitative methods applied in production, quality management, location and layout planning, safety and loss management, cost management elements of cost of products, cost centers and allocation of overhead costs.
- 4. **Management Accounting:** Marginal costing, standard costing, cost planning and control, budget and budgetary control, development and planning process, annual development plan and National budget.

- 5. **Investment Management:** Objectives, strategy, investing, performance analysis of enterprise, investment appraisal, criteria of investment, cost planning and control, budget and budgetary control.
- 6. **Retail and Technology Management:** Concepts, strategy, sales promotion, patent laws, technology management, management of innovation and changes, technology life cycle.
- 7. **Scheduling Management:** Resource schedule, project schedule management, time-phased costs, budget baseline management.

ANNEX-A

A1. General Rubric Template for Project/Thesis

	Project proposal						
			Task Attainment Level				
SN	Criteria	Beginner (1-3)	Progressing (4-6)	Competent (7-8)	Proficient (9-10)		
1	Gap finding	Limited identification of gaps in the existing knowledge or research	Some identification of gaps in the existing knowledge or research, but with limited depth or breadth.	Effective identification of significant gaps in the existing knowledge or research.	Exceptional identification of critical gaps in the existing knowledge or research.		
2	Idea Generation	Minimal creativity or originality in generating project ideas.	Demonstrates moderate creativity or originality in generating project ideas.	Demonstrates strong creativity and originality in generating project ideas.	Displays exceptional creativity and originality in generating project ideas.		
3	Presentation	Disorganized presentation, lack of clarity, and ineffective use of visual aids	Adequate organization of the presentation, moderate clarity, and basic use of visual aids.	Well-organized and structured presentation, clear and concise delivery, and effective use of visual aids.	Highly organized and impactful presentation, confident and engaging delivery, and excellent use of visual aids.		

	Report Writing						
SN	Criteria	Beginner (1-3)	Progressing (4-6)	Competent (7-8)	Proficient (9-10)		
1	Organization	No proper organization and presentation difficult to follow.	Difficult to follow as there is only minimal organization and sequence.	Information presented in ordered and logical manner with proper sequence. Some difficulty in following.	Logical, sequential and comprehensive coverage of essential points. Natural flow of topic and easy to follow the presentation.		
2	Language	Basic level with many errors in spelling, grammar, mechanics.	Average level with some errors in spelling, grammar mechanics.	Well written with minor mistakes in spelling, grammar, mechanics which does not impede understanding.	Proficient in writing with very a few mistakes. Clarity in understanding and comprehension		
3	Timely Submission	Submission of the final report was delayed by a huge margin	Submission of the final report was delayed by a small margin	Submission of the final report was provided just before deadline	Submission of the final report was on time and with perfection		
4	Plagiarism content (%)	More than 60%	Between 40-60%	Between 20-40%	Less than 20%		

	Final Project Submission						
SN	Criteria	Beginner (1-3)	Progressing (4-6)	Competent (7-8)	Proficient (9-10)		
1	Project Significance	Inadequate explanation of how the project addresses existing challenges or gaps in the field.	Identifies potential impact and practical applications of the project to some extent.	Articulates how the project directly addresses existing challenges or gaps in the field with solid rationale.	Clearly and convincingly explains how the project significantly addresses existing challenges or gaps in the field, demonstrating advanced critical thinking.		

2	Final Project Implementation	Implementation wasn't close to the planning.	Implementation wasn't exactly like the proposal but some sort of findings were found.	Implementation was almost exact according to the proposal.	Could implement exactly like the proposal given. Some additional findings were also drawn.
3	Project Implication to Society	Project was not at all significant for the benefit of the society	Project was significant for the benefit of the society at a few aspects	Project was significant for the benefit of the society at most of the aspects	Project was significant for the benefit of society and offered a proper
4	Individual Knowledge about the project	Does not have grasp of required knowledge and core competence.	Uncomfortable in dealing with the relevant subject matter with only rudimentary understanding.	Adequate grasp of knowledge of subject matter but failure in elaboration of the salient points	Complete grasp of required knowledge as expected of the student level. Elaboration of all relevant topics.

	Presentation					
SN	Criteria	Beginner (1-3)	Progressing (4-6)	Competent (7-8)	Proficient (9-10)	
1	Clarity and Presentation Style	Poor presentation style, lacks organization and structure, difficulty in conveying information clearly, and minimal use of visual aids or supporting materials.	Some improvement in presentation style, demonstrates basic organization and structure, moderately clear in conveying information, and incorporates limited visual aids or supporting materials.	Effective presentation style, well-organized and structured, clear in conveying information, effectively uses visual aids and supporting materials to enhance understanding.	Outstanding presentation style, highly organized and structured, exceptional clarity in conveying information, skillfully integrates visual aids and supporting materials to engage and captivate the audience.	
2	Time Management	Presentation could not be completed within the prescribed time. Much content left out that hampers understanding.	Presentation not complete within time but finished with some extension of time. Understandable presentation.	Adequate completion of the presentation with some skipping or omission of slides and content to stay within the time limit	Successful completion of all aspects of presentation and question/answer session within the given time. Proper time spent for each content or topic.	
3	Ability to answer the questions	Almost no comprehension and response to audiences' questions.	Rudimentary response to questions demonstrating only basic understanding.	Adequate response to questions on subject matter with only minor hesitations and some confusion.	Sufficient and elaborate response to questions and demonstration of the mastery of subject matter. Little to no hesitation or confusion.	

	Project Engagement						
SN	Criteria	Beginner (1-3)	Progressing (4-6)	Competent (7-8)	Proficient (9-10)		
1	Organized Progression	No coherence and cohesion. Lack of direction	Basic flow of ideas but insufficient coherence and organization of information	Good flow and coherence. Organized information and elaboration	Competence in organization and smooth flow of ideas and information. Progresses from general to specific content		
2	Synthesis of ideas	Limited synthesis of	Shows some ability to synthesize ideas,	Effectively synthesizes ideas,	Exceptional synthesis of ideas,		

		ideas, struggles to connect concepts, lacks coherence in arguments, and demonstrates a basic understanding of the topic.	demonstrates a moderate level of coherence in arguments, and displays a developing understanding of the topic.	presents coherent and logical arguments, and demonstrates a solid understanding of the topic.	seamlessly connects concepts, presents highly coherent and compelling arguments, and demonstrates an in- depth understanding of the topic.
3	Communication Skill	Limited or ineffective communication, lack of clarity in expressing thoughts, minimal initiative in scheduling meetings.	Some effort in initiating communication, periodic progress updates, moderate initiative in developing professional relationships with the faculties.	Effective and regular communication, proactive engagement in seeking guidance.	Highly effective and proactive communication, strong initiative and independence in seeking guidance.
4	Responsiveness and Sincerity	Limited sincerity and responsiveness, lack of commitment, minimal effort in meeting deadlines, and difficulty in addressing feedback.	Some sincerity and responsiveness, occasional commitment, moderate effort in meeting deadlines, and attempts to address feedback.	Demonstrates sincerity and responsiveness, commitment to the project, meets deadlines consistently, and actively addresses feedback.	Exceptional sincerity and responsiveness, unwavering commitment, consistently meets or exceeds deadlines, and effectively incorporates feedback to enhance the thesis work.

A2. General Rubric Template for Presentation Skill

Assessment Criteria	Excellent (4.1-5)	Good (3.1-4)	Satisfactory (1.5-3.0)	Poor (0-1.5)
Knowledge	a) Has in depth idea on the concept and technical details of the presentation topic.b) Able to answer all questions asked on the topic.	 a) Has moderate idea on the concept and technical details of the presentation topic. b) Able to answer at least 70% of the questions asked on the topic. 	 a) Has below average idea on the concept and technical details of the presentation topic. Concepts are not clear and struggled to convey the technical ideas. b) Able to answer 40- 69% of the questions asked on the topic. 	 a) Has poor understanding of the concept and technical details of the presentation topic. Concepts are not clear at all and struggled to convey the technical ideas. b) Able to answer none or below 40% of the questions asked on the topic.
Content	a) Presentation covers all necessary theoretical details of the topic.	a) Presentation covers most of the necessary theoretical details of the topic.	a) Presentation somewhat covers necessary theoretical details of the topic.	a) Presentation scarcely covers necessary theoretical details of the topic.
	b) Presentation conveys all of the details with most appropriate practical figures and sources.c) The topic is well researched and all	b) Presentation conveys most of the details with moderately appropriate practical figures and sources.c) The topic is moderately researched	b) Presentation conveys below average details with somewhat appropriate practical figures and sources.c) The topic is lacking	b) Presentation conveys very poor details with ambiguous and irreverent figures and sources.c) The topic is much lacking in research and few sources/references
	sources/references are included.	and most sources/references are included.	in research and few sources/references are included.	are included.

Assessment Criteria	Excellent (4.1-5)	Good (3.1-4)	Satisfactory (1.5-3.0)	Poor (0-1.5)
Presentation Skill	1. The topic is presented thoroughly with clearly explaining the concepts.	1. The topic is presented adequately with an average explanation of the concepts.	1. The topic is presented with an average to poor explanation of the concepts.	1. The topic is presented with poor explanation of the concepts.
	2. Uses proper enunciation.	2. Speaker is moderately enunciated.	2. Speaker is somewhat enunciated.	 Speaker is not enunciated all. Not at all
	3. Well-articulated in his/her speech and very clearly audible.	3. Averagely articulated in his/her speech and clearly audible.	3. Somewhat articulated in his/her speech and not clearly	Articulated in his/her speech and not clearly audible.
	4. Able to explain the technical concepts in a precise and clear manner.	4. Able to explain the technical concepts in an averagely precise and clear manner.	audible. 4. Unable to Explain the technical concepts in a precise manner.	4. Failed to explain the technical concepts in a precise manner. Concepts were not at all conveyed.
Appearance and Discipline	1. Start and finish the presentation within specified time limit.	1. Exceeded the time limit by at most 15 seconds.	1. Exceeded the time limit by at most 30 seconds.	1. Exceeded the time limit or finished too early and didn't research the topic.
	2. Participation of all team members is ensured.	2. Participation of all team members is ensured with exception of at most 1 team member.	2. Participation of all team members is ensured with exception of at most	2. Participation of all team members is not ensured at all. Unequal distribution of workload.
	3. Maintain MIST dress code thoroughly and smartly.	3. Maintain MIST dress code on average.	 2 team members. Maintain MIST dress code poorly. 	3. Didn't Maintain MIST dress code.
	4. ID card visible.	4. Carrying ID card, but not visible.	5. Is not carrying ID card.	4. Is not carrying ID card or any identification.

A3. General Rubric template for Assignment/Report

Assessment Criteria	Excellent (80-100%)	Good (60-79%)	Satisfactory (40-59%)	Poor (0-39%)
	Information very relevant to the question with appropriate	Information very relevant to the question.	Information relevant to the question.	Information is not always relevant.
Content	reference.	All aspects of the question addressed.	All aspects of the question addressed.	Some aspects of the question not addressed.
	All aspects of the question are fully addressed.			
	Paragraphs skillfully organized (maintain the logical coherence).	Paragraphs clearly organized.	Paragraphs clearly organized.	Paragraphs disorganized or missing
Organization	Arguments are skillfully sequenced.	Arguments are clearly sequenced.	Arguments are clearly sequenced.	
	Appropriate format used with competence.	Appropriate format used.	Appropriate format used.	Appropriate format inconsistency or absence.
Style	No errors in punctuation, grammar and spelling.	Very few errors in punctuation, grammar and spelling.	Occasional errors in punctuation, grammar and spelling.	Frequent errors in punctuation, grammar and spelling.
